RIO+20
Conferência das Nações Unidas sobre Desenvolvimento Sustentável

RIO +20
CRESCER, INCLUIR, PROTEGER

GOVERNO FEDERAL
BRASIL
PAÍS RICO É PAÍS SEM POBREZA

Título do Evento	Data de Início	Horário Início	Local	Descrição	Instituição Responsável	Palestrante
A Terra vista do céu	27/04/2012		Cinelândia	Inaugurada que no dia 27 de abril, essa exposição, localizada na Cinelândia, Centro do Rio, é considerada o pontapé inicial da Rio+20 e reúne 130 imagens do fotógrafo Yann Arthus-Bertrand. Ficará exposta até o dia 24 de junho. O acervo captura belas imagens da terra vista de cima, por helicóptero e até balão. Gratuito.		
Conferências + Eventos Especiais sobre Cidades Sustentáveis	18/05/2012		Forte de Copacabana	O ONU-Habitat e a Cidade do Rio de Janeiro estão organizando uma série de eventos e conferências dirigidas ao público em geral e aos meios de comunicação para discutir desafios e oportunidades das áreas urbanas no século 21. O objetivo é gerar debates para reunir propostas inovadoras e alcançar uma abordagem sustentável para todos os aspectos da crescente urbanização. Os Eventos Especiais abertos sobre as cidades sustentáveis culminarão no lançamento oficial da iniciativa “Sou um transformador urbano” [I’m a City Changer], um movimento global de sensibilização sobre as ações positivas que tiveram impactos na vida das pessoas em áreas urbanas. O evento será no Forte de Copacabana, no Rio de Janeiro. O credenciamento é obrigatório.		
Concurso Cultural Rio+Social	25/05/2012		Hotel Windsor Barra	Concurso cultural aberto ao público Descrição: Com apoio do Planeta Sustentável e da MTV, o concurso cultural da Rio+Social premiará o autor do melhor vídeo de 15 segundos sobre o tema "O que você tem a dizer sobre a Rio+20?" com uma viagem para acompanhar o evento Rio+Social no dia 19/6/12 no Rio de Janeiro. http://www.facebook.com/MTVBrasil/app_363471387043918	Planeta Sustentável

Classificação indicativa – 14 anos.	MAM	
Formatura Voluntários	09/06/2012	8:00:00	Arena do MAM	No dia 09 de junho, entre 8h e 18h, o Arena do MAM acolherá a cerimônia de formatura de cerca de 1200 jovens que atuarão como voluntários durante a Rio+20. O Programa de Voluntariado é uma iniciativa do governo brasileiro, em parceria com o PNUD e a agência UN Volunteers. Os voluntários foram selecionados entre alunos de ensino médio de escolas públicas fluminenses, alunos de ensino técnico do sistema FIRJAN, universitários de todo país e pessoas com deficiência provenientes da FAETEC e de outras entidades. Todos participaram de curso de treinamento, que incluiu oficinas sobre sustentabilidade, direitos humanos, cidadania ativa e voluntariado. Os principais objetivos do Programa são: envolver diversos segmentos da sociedade brasileira na realização da Conferência; oferecer oportunidades a jovens interessados em ganhar experiência com a realização de um evento internacional de grande porte e capacitá-los para o trabalho em equipe; bem como incentivar a prática do voluntariado no plano nacional. Acesso restrito	CNO

Fórum de Ciência, Tecnologia e Inovação para o Desenvolvimento Sustentável	11/06/2012	9:00:00	PUC - RJ	O evento proporcionará uma plataforma para a comunidade científica, políticos e outros interessados discutirem desafios e soluções para um desenvolvimento sustentável. Durante o Fórum, um documento de intenções será formulado e enviado para discussão na Conferência Rio+20. Além da necessidade urgente de ações para o desenvolvimento sustentável, o evento também irá abordar questões como a redução da pobreza e a importância das pesquisas interdisciplinares. Também pretende aumentar o diálogo entre a comunidade de ciência, tecnologia e inovação com políticos e a sociedade civil, e fornecer uma plataforma para os jovens discutirem as questões abordadas	Conselho Internacional de Ciência (ICSU)	
Forum on Science, Technology and Innovation for Sustainable Development	11/06/2012	9:00:00	PUC - RJ	The Forum aims to provide a platform for the science, technology and innovation (STI) community to highlight key messages within the Rio+20 context, and to enter into dialogue with policy-makers and other stakeholders. To highlight the urgent need for greater action on sustainable development and poverty alleviation, and to explore strategies and best practices for addressing these issues. To highlight the importance of interdisciplinary research, collaboration and dialogue across the natural science, social science and engineering communities, for addressing the interrelated economic, social and environmental pillars of sustainable development. To explore modalities for dialogue and collaboration between the STI community and policy-makers. To provide a platform for young people to discuss sustainable development issues, and to inspire young people and teachers about STI for sustainable development. To generate dialogue between the STI community and civil society stakeholders, including business and industry, indigenous peoples and farmers. To generate further momentum for the development of a new contract between science and society, including policy-makers and other stakeholder groups. To share global, regional and local perspectives	Conselho Internacional de Ciência (ICSU)

MUSICAL HAVANA CAFÉ	13/06/2012	19:00:00	UNEP	No Cais do Porto do Rio de Janeiro, em Berlim, em Havana, em Calcutá ou em qualquer Lugar, nosso cabaret se filia à tradição dos cabarés alemães dos anos 20, que serviram de inspiração e modelo para o teatro de Bertolt Brecht. Um barman prepara coquetéis que são servidos ao público por garçonetes do próprio elenco durante o espetáculo. As versões das músicas vão desde grandes standards norte-americanos a mambos, rumbas e boleros, que refletem sucessos e fracassos de um mundo em que tudo está à venda, tudo tem seu preço. Três músicos acompanham o elenco com sax, piano e contrabaixo, enquanto os atores se revezam, cantando e tocando instrumentos.	Ministério da Cultura

Além disso, o referido en€ontro servirá ainda para aprofundar a pauta da juventude e subsidiar a SNJ e o Conjuve na incid ncia nos documentos e resolu ões finais da Confer ncia Rio+20 bem como no estabelecimento de responsabilidades e pactua ões para a ões concretas pós-Rio+20. ê ç ê	Secretaria Nacional de Juventude da Presidência da Repúbica	
Encontro Global dos Municípios na Rio+20	13/06/2012		Vila Olímpica - Barra de Tijuca [ao lado do Riocentro]	Organizado pelo ICLEI – Governos Locais pela Sustentabilidade, o encontro abordará como "esverdear" a economia urbana e como os governos locais podem melhor contribuir para os objetivos de proteção dos bens comuns globais, bem como melhorar os sistemas de governança global e local.		
Rio Conventions Pavilion	13/06/2012		Vila Olímpica - Barra de Tijuca [ao lado do Rio Centro]	Convocada pelas Secretarias dos três acordos ambientais globais surgidos na Cúpula da Terra de 1992 – a Convenção Quadro das Nações Unidas sobre Mudança do Clima (UNFCCC), a Convenção das Nações Unidas de Combate à Desertificação e a Convenção da ONU sobre Biodiversidade, juntamente com o 'Global Environment Facility' e outros parceiros – o Pavilion realizará um programa de duas semanas de eventos e atividades, apresentando uma exposição retrospectiva e mostrando a contribuição desses tratados para o desenvolvimento sustentável. Apresentações focarão em temas como oceanos, cidades, economia verde, gênero e desenvolvimento.		
Rio Climate Challenge / Rio Clima	13/06/2012		Auditório da Firjan e Forte de Copacabana	Focado na contenção do aquecimento global, o evento debaterá a criação de uma nova forma de calcular as emissões de gases de efeito estufa (GEE) na atmosfera. Será apresentado um documento com compromissos de redução, adaptação e financiamento para a restrição de GEE. É uma iniciativa das subcomissões Rio+20, da Câmara dos Deputados e do Senado, com apoio da prefeitura do Rio de Janeiro, do governo do estado de Pernambuco e ONGs.		
Rio 92, para onde foi? Rio+20, para onde vai?.	13/06/2012	11:00:00	Arena da Barra	O objetivo principal deste evento será o de destacar os pontos fortes e fracos da Família de Pegadas, composta por três indicadores conhecidos como Pegada Ecológica, Pegada Hídrica e Pegada de Carbono. Isso auxiliaria no entendimento do uso destes indicadores para medir as várias dimensões relevantes do desenvolvimento sustentável. Vamos apresentar a aplicação de cada ferramenta, utilizando exemplos concretos, e de forma mais participativa possível, encerrando o evento com uma discussão qualificada.	WWF	

Turismo Cultural Inclusivo no Contexto da Sustentabilidade	13/06/2012	11:00:00	Arena da Barra	O principal objetivo é estabelecer diretrizes para a Acessibilidade Universal e o Desenho para Todos, buscando promover a inclusão de pessoas com deficiência. A Cultura no seu sentido mais amplo é um fator importante no turismo, especialmente se considerarmos o turismo mais do que uma atividade de lazer, considerando o desejo das pessoas de aprender, conhecer e descobrir coisas novas.	13/06/2012 14:45	
Avaliação do Ciclo de Vida (ACV) dos Blocos e Telhas Cerâmicas	13/06/2012	14:00:00	Arena da Barra	Análise do Ciclo de Vida como uma ferramenta de avaliação, com a qual se pretende conhecer e avaliar a carga ambiental associada a um produto, processo ou serviço, levando em conta todas as etapas de seu ciclo de vida ("do berço ao túmulo"), desde a extração das matérias-primas do meio natural para a fabricação do produto, até o tratamento do produto no final da vida útil do mesmo.	Associação Nacional da Indústria de Cerâmica Vermelha	
A Pegada Ecológica da cidade e estado de São Paulo / The ecological footprint of the City and State of São Paulo	13/06/2012	15:00:00	Arena da Barra	O objetivo principal do trabalho é calcular a pegada do Município e do Estado de São Paulo. O cálculo não só irá desencadear a discussão sobre os padrões de consumo da média urbana brasileira, mas também levantar questões sobre como mitigar os impactos deste consumo e criar cadeias produtivas mais sustentáveis. A parceria desta iniciativa é com a Secretaria de Meio Ambiente do Estado de São Paulo e a Secretaria de Meio Ambiente de São Paulo. Por parte da sociedade civil, o Movimento Nossa São Paulo vem trabalhando com indicadores de sustentabilidade para a cidade e está envolvido na discussão das cadeias sustentáveis e de compras públicas responsáveis . Durante o evento, iremos também colaborar com a Global Footprint Network. O resultado esperado desse evento será o cálculo da pegada e o compromisso com a redução da mesma.	WWF	
Acessibilidade em Grandes Eventos Mundiais: a Conferência Rio+20	13/06/2012	15:15:00	Arena da Barra	Construir uma economia verde e sustentável também contribuirá para o incremento da inclusão de pessoas com deficiência, por meio da Educação Inclusiva, da Sustentabilidade e da Acessibilidade em seu sentido pleno. Semear e aprofundar a discussão destes temas é uma das metas do SUDI 2012, avançando na criação de oportunidades para tirar as pessoas da pobreza. Este evento busca esta sinergia entre os diferentes atores sociais, instituições públicas e privadas, governos e universidades.	UFRJ/CNO

A bioeconomia do futuro	14/06/2012	11:00:00	Parque dos Atletas	Em uma futura economia verde sustentável, é essencial utilizar a biomassa para um número de diferentes aplicações; alimento, celulose, papel, combustível para CHP, combustível para transporte, produtos químicos verdes, produtos têxteis verdes e assim por diante. O mercado de biomassa irá aumentar (dramaticamente) e será importante aperfeiçoar o uso entre aplicativos diferentes e seguindo uma linha de valor decrescente até que este seja utilizado para aquecimento/resfriamento e/ou eletricidade, ou seja, será muito importante integrar e desenvolver sistemas de análise. Além disso, para entender o processo de investigação até o produto/serviço final é fundamental compreender os mecanismos do sistema de inovação, por exemplo, de forma a desenvolver políticas adequadas para alcançar uma economia verde sustentável. Evento aberto ao público. Palestrantes: Claes Tullin (SP Techical Research Institute of Sweden).	Embaixada da Suécia	Claes Tullin
Inventário de Gases de Efeito Estufa do ES e Programa Estadual de Adaptação às Mudanças Climáticas	14/06/2012	11:00:00	Parque dos Atletas	O Estado do Espírito Santo publicou a Lei 9.531, de 17 de setembro de 2010, que institui a Política Estadual de Mudanças Climáticas. No âmbito da Política duas ações se destacam: o Inventário de Gases de Efeito Estufa do Espírito Santo e o Programa de Adaptação às Mudanças Climáticas. O Inventário quantificou as emissões de responsabilidade do Estado do Espírito Santo segundo a metodologia do IPCC e foi elaborado em parceria com o Instituto Jones dos Santos Neves, a OSCIP Agência Nacional de Desenvolvimento Econômico Social e Defesa Ambiental, ANDESA e o Instituto Virtual Internacional de Mudanças Globais. O Programa Estadual de Adaptação às Mudanças Climáticas tem como objetivo implementar ações de prevenção e adaptação aos efeitos das mudanças climáticas, tendo como ações primárias, a instalação de um Sistema de Monitoramento Hidrometeorológico e Alerta de Desastres, a elaboração de Planos Municipais de Redução de Risco e de Drenagem de Águas Urbanas e a estruturação das Coordenações Municipais de Defesa Civil. Evento aberto ao público. The Future of the Amazon: a low carbon production model	14/06/2012	11:30:00	T-8 (Riocentro)	The Amazon Environmental Research Institute (IPAM) is a Brazilian NGO which work concept is based on participatory research by measuring and assessing from the point of view of scientific research, environment conservation and community. In order to promote Amazon conservation and development, IPAM currently works on three programs: (1) Community Management of Varzeas (Floodplains) and Forests, (2) Amazon Scenarios and (3) Climate Change. These programs have generated a considerable amount of information and encouraged initiatives to support public policies, local action and international agreements by working together with family farmers, farm producers, indigenous people, traditional communities and the government as a whole. At Rio+20, IPAM , partners and invited guests (academia, government and civil society) will present the recent scientific researches on climate change and REDD, besides exchanging information and perspective of traditional knowledge.	Amazon Environmental Research Institute (IPAM)	
Land and Life: Human Security through Sustainable Development	14/06/2012	11:30:00	T-10 (Riocentro)	The workshop will be organised by practitioners of sustainable development on the part of IofC, on the one hand, and CEFO as an academic group whose members do research in sustainable development, on the other. Most, if not all, topics of the current CEFO members fall under the fields of sustainable development and human security (food security, land security and rights, energy security, just governance, inclusive economics, etc.). This collaboration is an important step to bringing researchers of various disciplines and practitioners together and exploring mechanisms of creating such partnerships. The workshop will allow bringing out the questions of methodologies and interdisciplinary nature of participants' research. The session will be facilitated with the aim of creating synergies in research and communication among representatives of various disciplines (natural and social sciences) working for human security and sustainable development.	Initiatives of Change International	

The need for a rights-based approach to sustainable development	14/06/2012	11:30:00	T-9 (Riocentro)	The side event will focus on the normative reference base for a human rights-based approach to sustainable development governance and make suggestions for required institutional settings and legislation. Normative considerations will be enriched with critical policy analysis and intelligence drawn from the practices the contributing organisations are undertaking in their various action fields. These practices reach from grass-root level work with indigenous communities over policy and law related research and outreach to critical philosophy on global ethics (and back). The event will stage six contributions and organise interactive discussion with participants on issues related to human equality and sustainable development. Based on the contributions and the discussion, a joint reflection document will be prepared as information for civil society and as input towards and beyond the official Rio+20 conference.	Centre for Ethics and Value Inquiry (CEVI)	
SUSTAINABLE LIFESTYLES 2050	14/06/2012	11:30:00	T-3 (Riocentro)	Radical new thinking is required to directly address the current urgency for new solutions within new cultural and policy frameworks that will drive more sustainable development and poverty eradication. We need more than technological innovation to transform our current lifestyles into sustainable ones, but also social innovation is crucial to obtain this. A social platform led by civil society organizations and research centers in Europe has been working on defining sustainable lifestyles and drafted roadmaps for more sustainable lifestyles 2050 applying back casting methodologies. In these roadmaps concrete plans of action for different stakeholders are included.	Northern Alliance for Sustainability	
GREEN ECONOMY, SUSTAINABLE DEVELOPMENT FROM A PERSPECTIVE OF YOUTH	14/06/2012	11:30:00	T-4 (Riocentro)	THE GREEN ECONOMY IN THE FRAME OF THE SUSTAINABLE DEVELOPMENT, IMPLIES A CHALLENGE THAT MUST REPRESENT IMPORTANT EFFORTS THAT AFFECT DIRECTLY IN THE YOUTH, REASON FOR WHICH, TO EXAMINE HIS SCOPE, MANNERS OF TRANSITION, IT IS MECHANISMS OF FINANCING THAT THEY ALLOW INSTITUTIONAL OPENINGS FOR HIS EXECUTION, IS FOR YOUNG WOMEN A MATTER OF THE FIRST ORDER, IN THE SENSE THAT THE DEVELOPMENT AS IT IS CONCEIVED, INFLUENCES THEM IN A ROYAL WAY, REASON FOR WHICH, A TRAFFIC TOWARDS THE GREEN ECONOMY IS A MATTER THAT FOR THE YOUNG PERSONS IS TRANSCENDENTAL. Innovation and uptake of best practices for sustainable agriculture	14/06/2012	13:30:00	T-9 (Riocentro)	Best practices and technology can help sustainably increase productivity and leverage agriculture?s poverty reduction potential. But they need to be shared, deployed and adapted because every country, every farmer and every field are different. Knowledge sharing mechanisms, such as extension services, are essential for addressing existing implementation gaps, deploying new technologies and to ensure farmers around the world can use the tools most adapted to them. However, knowledge sharing mechanisms such as extension services have often been neglected and suffered from budget cuts and a lack of attention to the sector. In the meantime, public support for agricultural support also declined, raising questions about how research can address the need of farmers in different geographies. Scaling up best practices, deploying innovations, sharing knowledge, need to become priorities for the future agriculture agenda, with complementary role for public and private actors in achieving sustainable agriculture.	Farming First	
4th HELENA Z. BENITEZ GLOBAL FORUM ON GENDER JUSTICE AND THE GREEN ECONOMY FOCUSING ON WATER, ENERGY, AND FOOD: PROMISES AND PARADIGMS	14/06/2012	13:30:00	T-10 (Riocentro)	The '4th HELENA Z. BENITEZ GLOBAL FORUM ON GENDER JUSTICE AND THE GREEN ECONOMY FOCUSING ON WATER, ENERGY, AND FOOD : PROMISES AND PARADIGMS.' aims to present fully gender and development issues which are vigorously embedded within the framework of fundamental human rights and gender justice in the Asia-Pacific region and in many parts of the world. It hopes to elevate further the discussions on the theme of green economy and gender equality, justice and human rights with special focus on water, energy, and food nexus , to a broader and more significant audience , during the United Nations Conference on Sustainable Development, Rio+20 , in Rio de Janiero Brazil, June 2012. IMPACTS OF PLASTICS ON THE ENVIRONMENT AND THE HEALTH OF WOMEN AND CHI	14/06/2012	13:30:00	T-2 (Riocentro)	THE VOICES OF AFRICAN MOTHERS: www.vamothers.org The Voices of African Mothers works to establish a peaceful African Continent through conflict resolution and to identifying the causes of ethnic, religious and inter-communal conflict. VAM envision women and future generations to possess a full range of educational opportunities to attain empowerment to become decision-making leaders of Africa.. VAM believes access to education is key to equality. Equality is the application of the principle of natural justice and fairness. This refers to the legal and social capacity of men, women, boys and girls to mobilize and manage domestic, community, national and international resources and share the benefits arising there on an equal basis. VAM promotes economic empowerment and equality through resource production that are appropriate for needs through vocational training and development of business skills. Health education is provided in the areas of preventive health care, nutrition, hygiene, preadolescent pregnancy, family planning etc.	Voices of African Mothers	
Greenpeace: An Oceans Rescue Plan for Rio	14/06/2012	13:30:00	T-2 (Riocentro)	The future of high seas life is at stake at Rio+20 UNCSD. Despite WSSD commitment to protected area networks by 2012, legal gaps in oceans governance allow for plunder and destruction. Our side event exposes these gaps through real world examples and presents Greenpeace?s Oceans Rescue Plan. 99% of ocean is currently unprotected, so the future of millions that depend on it for their livelihoods is at risk. Pacific small island nations struggle to secure sustainability of their fisheries and long-term future of coastal communities, while large-scale fishing fleets from around the globe race to catch the last tuna. In the Indian Ocean, a fragmented, inadequate governance regime leaves it open to wholesale plunder. Even Arctic waters are facing increasing industrialization as ice melts. In Rio, Governments must agree to an implementing agreement under UNCLOS to enable the protection of high seas biodiversity and the creation of marine reserves.	Greenpeace	
Financing Sustainable Transport to Support Sustainable Development	14/06/2012	13:30:00	P3-F (Riocentro)	Transportation is a key building block of sustainable development. The majority of transport financing supports unsustainable transportation, increasing inequality of access, CO2 and air pollution, traffic fatalities, and sprawl development. A growing share of transport financing from climate funds and development aid programs supports sustainable transport. Emerging best practices in national transportation policy also have potential to leverage changes in transport sustainability by influencing larger public and private sector transport investments. Sustainable transport seeks to avoid low value or unnecessary travel through smarter planning and communications, shift travel to lower impact passenger and freight modes, and improve the efficiency of vehicles, fuels, and network operations. This session discusses efforts to measure the contribution of transport investments to support sustainability goals, focusing on key metrics and indicators as well as providing an overview of recent patterns and trends in transport funding flows from different sources worldwide.	Institute for Transportation and Development Policy	

Enabling Youth participation in bridging Rio+20 Outcome Beyond 2015 wi	14/06/2012	13:30:00	P3-3 (Riocentro)	The Side Event in the Rio+20 will emphasize on Youth Engagement, mobilization and empowerment on UNCSD/Rio+20 and beyond process, as the Major Group for Children and Youth (MGCY) is the main entry-point for all children, youth and their organization into the process. The side event will do it?s best to provide a meaningful session for youth participation. This will be a good an opportunity to showcase the enthusiasm and courage of the Sri Lankan youth in this high-level UN event to bridge the gap between the Global North and the Global South youth. We would like to make this side event as a platform to network as much as youth leaders around the world who are participating in Rio in June and to carry out a mass youth campaign and mobilization for an ambitious deal in Rio+20. The side event will composed of a plenary session of experts, motivators and youth, they would speak on above themes and implementations of agendas.	Sri Lanka	
The Technology Economy? Know-how, Know-what, Know-why	14/06/2012	13:30:00	T-6 (Riocentro)	The year after the Earth Summit -- on the eve of the Knowledge Economy -- the UN lost its only two global facilities for technology assessment. Since then, billions of public dollars have been lost subsidising nuclear fusion, biotech-fermentation, Terminator technologies, nanotechnology, second-generation biofuels, and ocean fertilization, etc- largely because of the absence of adequate technology assessment. At Rio+20, the UN must protect the sovereignty and security of member states by ensuring that the know-how of technology transfer is supported by the know-what of technology assessment and the know-why of socioeconomic benefits. The side-event will hear experts discuss the problems, specific language and institutional modalities governments could adopt now and implement post-Rio.	ETC Group (Action Group on Erosion, Technology and Concentration)	
Impact of Weapon Contamination (WEC) towards Sustainable Development	14/06/2012	13:30:00	T-5 (Riocentro)	Weapon Contamination (WEC) refers to landmines and explosive remnants of war (ERW). The latest consists of both unexploded ordnance (UXO) that has been fired but has failed to explode, and abandoned ordnance. First and foremost, WEC causes deaths and injuries, even after the end of armed conflict. However, the destructive impact goes much further.	International Committee of the Red Cross (ICRC)

Innovation and uptake of best practices for sustainable agriculture	14/06/2012	13:30:00	T-9 (Riocentro)	Best practices and technology can help sustainably increase productivity and leverage agriculture?s poverty reduction potential. But they need to be shared, deployed and adapted because every country, every farmer and every field are different. Knowledge sharing mechanisms, such as extension services, are essential for addressing existing implementation gaps, deploying new technologies and to ensure farmers around the world can use the tools most adapted to them. However, knowledge sharing mechanisms such as extension services have often been neglected and suffered from budget cuts and a lack of attention to the sector. In the meantime, public support for agricultural support also declined, raising questions about how research can address the need of farmers in different geographies. Scaling up best practices, deploying innovations, sharing knowledge, need to become priorities for the future agriculture agenda, with complementary role for public and private actors in achieving sustainable agriculture	Farming First	
4th HELENA Z. BENITEZ GLOBAL FORUM ON GENDER JUSTICE AND THE GREEN ECONOMY FOCUSING ON WATER, ENERGY, AND FOOD: PROMISES AND PARADIGMS	14/06/2012	13:30:00	T-10 (Riocentro)	The '4th HELENA Z. BENITEZ GLOBAL FORUM ON GENDER JUSTICE AND THE GREEN ECONOMY FOCUSING ON WATER, ENERGY, AND FOOD : PROMISES AND PARADIGMS.' aims to present fully gender and development issues which are vigorously embedded within the framework of fundamental human rights and gender justice in the Asia-Pacific region and in many parts of the world. It hopes to elevate further the discussions on the theme of green economy and gender equality, justice and human rights with special focus on water, energy, and food nexus , to a broader and more significant audience , during the United Nations Conference on Sustainable Development, Rio+20 , in Rio de Janiero Brazil, June 2012. IMPACTS OF PLASTICS ON THE ENVIRONMENT AND THE HEALTH OF WOMEN AND CHI	14/06/2012	13:30:00	T-2 (Riocentro)	THE VOICES OF AFRICAN MOTHERS: www.vamothers.org The Voices of African Mothers works to establish a peaceful African Continent through conflict resolution and to identifying the causes of ethnic, religious and inter-communal conflict. VAM envision women and future generations to possess a full range of educational opportunities to attain empowerment to become decision-making leaders of Africa.. VAM believes access to education is key to equality. Equality is the application of the principle of natural justice and fairness. This refers to the legal and social capacity of men, women, boys and girls to mobilize and manage domestic, community, national and international resources and share the benefits arising there on an equal basis. VAM promotes economic empowerment and equality through resource production that are appropriate for needs through vocational training and development of business skills. Health education is provided in the areas of preventive health care, nutrition, hygiene, preadolescent pregnancy, family planning etc.	Voices of African Mothers	

Greenpeace: An Oceans Rescue Plan for Rio	14/06/2012	13:30:00	T-2 (Riocentro)	The future of high seas life is at stake at Rio+20 UNCSD. Despite WSSD commitment to protected area networks by 2012, legal gaps in oceans governance allow for plunder and destruction. Our side event exposes these gaps through real world examples and presents Greenpeace?s Oceans Rescue Plan. 99% of ocean is currently unprotected, so the future of millions that depend on it for their livelihoods is at risk. Pacific small island nations struggle to secure sustainability of their fisheries and long-term future of coastal communities, while large-scale fishing fleets from around the globe race to catch the last tuna. In the Indian Ocean, a fragmented, inadequate governance regime leaves it open to wholesale plunder. Even Arctic waters are facing increasing industrialization as ice melts. In Rio, Governments must agree to an implementing agreement under UNCLOS to enable the protection of high seas biodiversity and the creation of marine reserves.	Greenpeace	
Financing Sustainable Transport to Support Sustainable Development	14/06/2012	13:30:00	P3-F (Riocentro)	Transportation is a key building block of sustainable development. The majority of transport financing supports unsustainable transportation, increasing inequality of access, CO2 and air pollution, traffic fatalities, and sprawl development. A growing share of transport financing from climate funds and development aid programs supports sustainable transport. Emerging best practices in national transportation policy also have potential to leverage changes in transport sustainability by influencing larger public and private sector transport investments. Sustainable transport seeks to avoid low value or unnecessary travel through smarter planning and communications, shift travel to lower impact passenger and freight modes, and improve the efficiency of vehicles, fuels, and network operations. This session discusses efforts to measure the contribution of transport investments to support sustainability goals, focusing on key metrics and indicators as well as providing an overview of recent patterns and trends in transport funding flows from different sources worldwide.	Institute for Transportation and Development Policy	
Enabling Youth participation in bridging Rio+20 Outcome Beyond 2015 wi	14/06/2012	13:30:00	P3-3 (Riocentro)	The Side Event in the Rio+20 will emphasize on Youth Engagement, mobilization and empowerment on UNCSD/Rio+20 and beyond process, as the Major Group for Children and Youth (MGCY) is the main entry-point for all children, youth and their organization into the process. The side event will do it?s best to provide a meaningful session for youth participation. This will be a good an opportunity to showcase the enthusiasm and courage of the Sri Lankan youth in this high-level UN event to bridge the gap between the Global North and the Global South youth. We would like to make this side event as a platform to network as much as youth leaders around the world who are participating in Rio in June and to carry out a mass youth campaign and mobilization for an ambitious deal in Rio+20. The side event will composed of a plenary session of experts, motivators and youth, they would speak on above themes and implementations of agendas.	Sri Lanka	
The Technology Economy? Know-how, Know-what, Know-why	14/06/2012	13:30:00	T-6 (Riocentro)	The year after the Earth Summit -- on the eve of the Knowledge Economy -- the UN lost its only two global facilities for technology assessment. Since then, billions of public dollars have been lost subsidising nuclear fusion, biotech-fermentation, Terminator technologies, nanotechnology, second-generation biofuels, and ocean fertilization, etc- largely because of the absence of adequate technology assessment. At Rio+20, the UN must protect the sovereignty and security of member states by ensuring that the know-how of technology transfer is supported by the know-what of technology assessment and the know-why of socioeconomic benefits. The side-event will hear experts discuss the problems, specific language and institutional modalities governments could adopt now and implement post-Rio.	ETC Group (Action Group on Erosion, Technology and Concentration)	
Impact of Weapon Contamination (WEC) towards Sustainable Development	14/06/2012	13:30:00	T-5 (Riocentro)	Weapon Contamination (WEC) refers to landmines and explosive remnants of war (ERW). The latest consists of both unexploded ordnance (UXO) that has been fired but has failed to explode, and abandoned ordnance. First and foremost, WEC causes deaths and injuries, even after the end of armed conflict. However, the destructive impact goes much further.	International Committee of the Red Cross (ICRC)

Launching of the "Humanity Right to life" book and Presentation of a documental on Fidel Castro's Environmental thought	14/06/2012	15:30:00	T-6 (Riocentro)	The book "El derecho de la humanidad de existir", edited in Havana by Editorial Ciencia y Técnica, in 2012, is a compilation of the Reflections by Commander in Chief Fidel Castro Ruz, on the damages to the environment and the climate changes. Through the reflections, published since 2007 up to the present, diverse isues are discussed such as the rise of prices and food scarcity, the natural disasters, the nuclear war and others that affect the existence of the human species. Documentary "Fidel Castro, caudal de Río", refers to the development of the environmental ideas of Fidel Castro since his childhood up to the present. Through images and solid opinions by researchers, experts and specialists in the Cuba issue, the positions held by Fidel Castro on this question are analyzed, and special attention is dedicated to his address to the Río Summit in 1992 and the warnings issued since that moment on the damages caused by the climate change and the urgent need to develop actions to stop the accelerated devastation of the environment. RUSSIA. Water: for health and against disability	14/06/2012	15:30:00	T-10 (Riocentro)	According to forecasts, not less than 40 % of residents of the Earth will live in conditions of deficiency of water in 15 years. Russia takes the second place in the world (after Brazil) on stocks of fresh water. But today each second resident of the country is compelled to use the water mismatching sanitary-and-hygienic requirements for drink. And 22 % of the population has no access to the centralized sources of water supply! It inevitably leads to illness of the population. The prevalence of disability is about 15-18% of the population in the world and it is strongly associated with poverty. Disability and poverty form a vicious cycle - disability leads to poverty, and poverty creates the conditions that generate more disability. Disability also impacts on entire families? labor force, participation and schooling; therefore failing to address the barriers they face to escape decrease of living standards, seriously undermines the effectiveness of struggle against disability.	Interregional Union of Life Help for Mentally Handicapped Persons	
Multi-stakeholder Engagement in IFSD & Compendium of Commitments	14/06/2012	15:30:00	T-3 (Riocentro)	The Zero Draft underscored that a ?fundamental prerequisite for the achievement of sustainable development is broad public participation in decision-making? at the international, national and local levels. This side event will be a third in a series that will examine the representation, participation and accountability of civil society and Major Groups in informing, monitoring and implementing intergovernmental policy-making in a reformed IFSD that embraces multi-level governance. Speakers will evaluate best practices of public participation in other multilateral bodies as well as civil society proposals not yet implemented. Participants will consider the implementation and design of the Compendium of Commitments through such mechanisms as the Global Union for Sustainability that will provide an accountability framework for all stakeholders to pledge and monitor specific actions that are specific, time-bound, measurable, and verifiable to achieve sustainable development at the international, regional, national and subnational levels. FOOD SECURITY, GREEN ECONOMY AND BIODIVERSITY CONSERVATION: OPPORTUNITIES AND LESSONS FROM THE BRAZILIAN AGRICULTURE SECTOR	14/06/2012	15:30:00	T-4 (Riocentro)	Brazil is an agricultural superpower, with the world?s largest commercial cattle herd, and is a major producer of crops including soy and sugar cane. In recent years, Brazil?s deforestation rate has declined to a quarter of its peak, without a reduction in agricultural output, while there has been an increase in efforts towards sustainability throughout the supply chains of major products. Cattle ranching is the largest driver of deforestation but techniques developed by the Brazilian Government Agricultural Research Corporation, Embrapa, can double herd densities through the use of improved pasture mixtures and breeds and rotational grazing. Embrapa?s techniques can increase rural employment, reduce methane emissions and free up land which can be used for crop production, while eliminating the need for deforestation. This is a key example of a win-win-win opportunity to integrate economic development with environmental sustainability and food security which offers lessons applicable to other countries.	National Wildlife Federation	
Energy and Sustainable Development	14/06/2012	15:30:00	T-8 (Riocentro)	Energy is one of the main issues to be discussed in the UN Conference for Sustainable Development. The share of energy resources for the sustainable development, mainly the renewable, is the central subject for discussion.	BRAZIL

Projeto GEF Polinizadores - polinização, biodiversidade e segurança alimentar	14/06/2012	16:00:00	Parque dos Atletas	Em função da importância da polinização para a agricultura, a Convenção sobre Diversidade Biológica aprovou a criação de uma "Iniciativa Internacional para a Conservação e o Uso Sustentável dos Polinizadores - IPI" (Decisão V/5), bem como um Plano de Ação para sua implementação (Decisão VI/5). Para promover a implementação da IPI em países em desenvolvimento, a FAO convidou o Brasil a fazer parte de um projeto internacional intitulado "Conservação e Manejo de Polinizadores para Agricultura Sustentável através de uma Abordagem Ecossistêmica", juntamente com África do Sul, Quênia, Gana, China, Índia, Paquistão e Nepal. Esse projeto com duração de cinco anos, foi aprovado em 2009 pelo GEF, no Brasil é coordenado pelo Ministério do Meio Ambiente e executado pelo Fundo Brasileiro para a Biodiversidade. O comitê coordenador do Projeto GEF Polinizadores definiu como principal ação o apoio ao sete subprojetos que lidam com as culturas do Algodão, Tomate, Castanha do Brasil, Melão, Caju, Maçã e Canola. Outros dois projetos que tratam do efeito da fragmentação de habitas na produtividade agrícola e da avaliação do status de conservação dos polinizadores também estão sendo apoiados. O projeto também executa ações transversais em: monitoramento da	Departamento de Conservação da Biodiversidade/MMA.

Implementation of the SEEA: the international statistical standard for environmental-economic accounting	14/06/2012	17:30:00	T-9 (Riocentro)	Twenty years ago Agenda 21 sought a systems approach to monitoring the transition to sustainable development and noted the need for the development of integrated environmental-economic accounts. Following two decades of development of methods and practical experience in countries, the Central Framework of the System of Environmental-Economic Accounting (SEEA) was recently adopted by the UN Statistical Commission as an international standard. The Statistical Commission further requested the Committee of Experts on Environmental Economic Accounting (UNCEEA) to develop an implementation programme. SEEA is a tool for statistical systems for integrating and organizing information on the economy and the environment to produce a wide range of indicators for analysis of sustainable development.	Institute of Geography and Statistics	

Indigenous Peoples, Food Sovereignty + Sustainable Development	14/06/2012	17:30:00	T-4 (Riocentro)	The International Indian Treaty Council (IITC) will host a panel presentation and roundtable discussion on Indigenous Peoples? Priorities for Ensuring Food Sovereignty in the Context of Local and Global Sustainable Development. Panel speakers: Andrea Carmen, Executive Director, IITC, Saul Vicente Vasquez, IITC Board Member and Expert Member of the UN Permanent Forum of Indigenous Issues (UNPFII), Mirna Cunningham, Chair of the UNPFII, Global Fund for Women Board Member, President of the Center for Autonomy and Development of Indigenous Peoples (CADPI), Jorge Mani Stanley, Kuna Youth Movement, Indigenous Member of the UN Committee on Food Security, Marcos Terena, Coordinator of the Comité Intertribal Memoria e Ciencia (ITC), Phrang Roy, Assistant President on Special Assignment for Indigenous and Tribal Issues of the International Fund for Agricultural Development (IFAD), Coordinator for the International Indigenous Partnership on Agrobiodiversity and Food Sovereignty. The panel will also include an African representative TBA.	International Indian Treaty Council	
Youth Perspective on Environmental Issues in Contemporary Societies	14/06/2012	17:30:00	T-5 (Riocentro)	GIMUN is a United Nations-accredited NGO holding Special Consultative Status to the UN Economic and Social Council (ECOSOC). Our goal is to promote the ideals and principles of the United Nations among youth, particularly amongst students. Youth Perspectives, our next event, is about giving the opportunity to young people engaged in the topic that is discussed to give their opinion. We want to reach conclusions that reflect the position of youth on central topics of contemporary international relations. The aim is to bring young people to discuss their points of view, to precise their opinions and to develop, in a coherent way, drafts of solutions to current issues.	Geneva International Model United Nations (GIMUN)	
Transboundary Waters, Climate Change and Good Governance	14/06/2012	17:30:00	T-8 (Riocentro)	All pillars of sustainable development require reliable access to adequate supplies of good-quality water. Population and economic growth are already straining water resources, and climate change will exacerbate this. In this context, international law has an integral role to play in ensuring that transboundary water resources are used in an equitable and sustainable manner. Proper management of these resources will contribute to economic growth that accounts for environmental and social considerations. The 1997 UN Watercourses Convention (UNWC), as a global legal framework adopted under the auspices of the UN, is an important tool for strengthening the legal architecture governing shared waters. Once in force, the convention will better enable cooperation between states that is essential to protect vital freshwater ecosystems, their functions and services. Since 2006, WWF and its partners have been working to build awareness of the convention and its principles, in an effort to strengthen international water law.	WWF Indonesia	
Learning from the MDGs: SDGs within a transformative post-2015 development agenda	14/06/2012	17:30:00	T-10 (Riocentro)	With more than a hundred Heads of State indicating their intention to attend the upcoming UN Conference on Sustainable Development, the outcomes of Rio+20 can be expected to greatly influence the global development agenda for the coming years. As the 2015 target completion date for the Millennium Development Goals (MDGs) draws near, Member States, the UN system and civil society are beginning a global discussion on the possible contours of a post-2015 development agenda. One of the proposals that have gained traction in the lead up to the Rio+20 Summit is the idea of launching a new set of ?Sustainable Development Goals? (SDGs), which some actors consider could become part of a possible post-2015 or post-MDG development agenda. This side event will gather experts from the UN System, Member States and civil society to draw lessons from the implementation of the MDGs, examine the proposals for SDGs in the outcome document of Rio+20 in light of these lessons, and outline concrete ideas for a transformative post-2015 development agenda.	Ibon International

Implementation of the SEEA: the international statistical standard for environmental-economic accounting	14/06/2012	17:30:00	T-9 (Riocentro)	Twenty years ago Agenda 21 sought a systems approach to monitoring the transition to sustainable development and noted the need for the development of integrated environmental-economic accounts. Following two decades of development of methods and practical experience in countries, the Central Framework of the System of Environmental-Economic Accounting (SEEA) was recently adopted by the UN Statistical Commission as an international standard. The Statistical Commission further requested the Committee of Experts on Environmental Economic Accounting (UNCEEA) to develop an implementation programme. SEEA is a tool for statistical systems for integrating and organizing information on the economy and the environment to produce a wide range of indicators for analysis of sustainable development. Oxfam International Youth Partnerships: Youth fixing the broken system	14/06/2012	19:30:00	T-3 (Riocentro)	Globally the world produces enough food to feed everyone, yet one in seven people on our planet go to bed hungry. Hunger, waste and environmental degradation are the result of a discriminatory global food system, which is broken. Nearly half of the world's population are aged 25 years and below, and it is these young people, and in particular young women, who are most impacted by the broken food system. Oxfam International Youth Partnerships (OIYP) brings together 15 young women and men from around the globe working to fix the broken food system. Using strategies based on the protection and realisation of all human rights these young people provide an insight into how we can address issues land and water access, support small scale producers (particularly women) and grow a global good food movement, to create a just and sustainable global food system where everyone has enough to eat, always.	Oxfam International Youth Partnerships (OIYP)	

National Sustainable Development Strategies-What's Their Future Role?	14/06/2012	19:30:00	P3-A (Riocentro)	The side-event focuses on the multidimensional challenges of national sustainable development strategies (NSDS). The side event?s objective is to evaluate the relation between NSDS (based on the examples and experiences of Switzerland, Liechtenstein, and further members of the European Sustainable Development Network ESDN) and newly emerging strategic approaches like green growth or green economy. Furthermore will success factors, opportunities and challenges of NSDS strategies, indicators and monitoring systems be analysed and discussed. Experiences that have been made in implementing these strategies and systems should be used and integrated when drafting a new generation of targets, indicators and monitoring systems, as for example sustainable development goals (SDGs). Visitas guiadas – Rio Paissagem Cultural □	14/06/2012		Centro Cultural Ação da Cidadania	Todos gratuitos, com saída do Centro Cultural Ação da Cidadania: 14/06 (quinta-feira) – Jardim Botânico - Saídas: às 09h30min e às 14h - Duração: 4 horas Da área atual de 137 hectares, 53 ha estão abertos à visitação pública. Seu arboreto, de traçado neoclássico, abriga grande coleção de plantas, organizadas em aleias geométricas, destacando-se as grandes palmeiras. O JB é dedicado à pesquisa científica, desenvolvida pelo Instituto de Pesquisas do Jardim Botânico, centro de referência mundial nos estudos sobre a Mata Atlântica. 15/06 (sexta-feira) - Baía de Guanabara – Saída: às 09h30min - Duração: 2 horas. Partida do Espaço Cultural da Marinha - Av. Alfredo Agache s/nº - Praça XV – Centro. Nos primeiros séculos de vida da cidade, as formações rochosas que a limitam foram importantes pontos de referência para sua defesa, onde foram instaladas baterias e fortalezas. Principal acesso à Cidade do Rio de Janeiro durante séculos, é a segunda maior baía, em extensão, do litoral brasileiro, com uma área de aproximadamente 380 km². Considerando-se a sua barra como uma linha imaginária, que se estende da ponta de Copacabana até ponta de Itaipu, esta sofre um estreitamento entre a ponta da Fortaleza de São João, na cidade do Rio de Janeiro, e a ponta da Fortaleza de Santa Cruz, em Niterói, com uma largura aproximada de 1.600 metros. 18/06 (segunda-feira) – Forte São José (Urca) - Saídas: às 09h30min e às 14h - Duração: 4 horas Localizado no conjunto que compõe a Fortaleza de São João, o Forte São José é o terceiro forte mais antigo do país, datado de 1578. Muitos historiadores dizem que se o Rio de Janeiro existe hoje, foi graças a este forte, estrategicamente localizado na entrada da Baía de Guanabara, exercendo papel marcante na defesa da cidade. 19/06 (terça-feira) – Orla de Copacabana/Forte do Leme - Saídas: às 09h30min e às 14h

Aldeia Global: É tudo nosso!	14/06/2012		Babilônia Chapéu Mangueira	A proposta consiste em uma exposição multimídia (vídeos, fotografia e áudios) intitulada "Aldeia Global: É tudo nosso!", que transmitirá ao público conteúdo relativo aos pilares da Rio+20. O material audiovisual será produzindo pelos alunos e membros do Grupo Pensar, que vem apostando em uma transformação social dentro da comunidade. A exposição servirá também como espaço de reconhecimento e memória, uma vez que as imagens projetadas dialogam diretamente com o território e seus moradores. A intenção então é chamar a atentação para a importância de cada indivíduo na construção de um coletivo mais justo e respeitado. A exposição vai buscar mostrar que atitudes individuais aparentemente insignificantes de um único indivíduo (como jogar lixo em local inapropriado) podem resultar em uma cadeia de acontecimentos prejudiciais em grande escala. Fundo Kayapó	14/06/2012	11:00:00	Arena da Barra	Este seminário tem por objetivo apresentar o Fundo Kayapó, uma parceria entre a CI-Brasil, o BNDES/Fundo Amazônia e o Fundo Brasileiro para Biodiversidade (Funbio). O Fundo tem por objetivo agregar esforços da sociedade civil, do setor público e dos próprios indígenas Kayapó, tornando-se um mecanismo sustentável, estável e de longo prazo, de apoio financeiro à disposição das organizações indígenas locais. Esse mecanismo tem por finalidade principal a proteção e a conservação da biodiversidade, do território e a prevenção do desmatamento, além do desenvolvimento de atividades produtivas sustentáveis em Terras Indígenas Kayapó integrantes do bioma Amazônia, promovendo, dessa forma, a melhoria da qualidade de vida do povo Kayapó na região. O fundo tem caráter inovador por consistir no primeiro fundo brasileiro voltado para povos indígenas. Além do estande, gostaríamos de reservar um espaço para debate mais aprofundado sobre o Fundo com lideranças Kayapó, governo e membros da sociedade civil.	Conservação Internacional do Brasil	
Palestra sobre Levantamento Agronômico-Ambiental para Regularização e Desenvolvimento Sustentável dos Territórios Quilombolas	14/06/2012	14:30:00	Arena da Barra	Abordagem sobre o levantamento de informações agronômicas e ambientais, o qual faz parte de peça técnica inicial da elaboração do Relatório Técnico de Identificação e Delimitação - RTID. Tem importância como diagnóstico ambiental e produtivo, visando o desenvolvimento sustentável das Comunidades Quilombolas e de seus territórios. Este trabalho compõe o processo de regularização de territórios quilombolas pelo Instituto Nacional de Colonização e Reforma Agrária – INCRA.	ASSINAGRO - Associação Nacional dos Engenheiros Agrônomos do INCRA	
Conferência sobre Função Social de Imóveis Rurais no Brasil	14/06/2012	16:00:00	Arena da Barra	Abordagem sobre a importância da fiscalização da função social dos imóveis rurais em seus aspectos produtivos, ambientais, trabalhistas e de bem estar de proprietários e trabalhadores, na promoção do desenvolvimento rural sustentável e na ampliação do Produto Interno Bruto do País. Resource Environment and Sustainable Development	15/06/2012	11:30:00	T-9 (Riocentro)	This side event will focus on the topic of resource, environment and sustainable development, which has attracted attentions from China and all over the world. The speakers will talk about the resource, environment and sustainable development in China, with regard to different areas and industries. It will include the status, achievements, challenges, as well as technology innovations. The speaker from UFRJ, Brazil will talk about the overall situation in Brazil. The discussion will focus on how to maintain the achievement and solve the problems related to resource, environment and sustainable development, not only in China and Brazil, but also in other developing countries. This side event is expected to show to the world the progress and efforts as well as challenges of sustainable development in China and Brazil, which is the sound from the developing countries in UNCSD/Rio+20.	Chinese Society for Sustainable Development	

Best practices and technology opportunities for farmers in South America	15/06/2012	11:30:00	T-5 (Riocentro)	Debates on agriculture often pit smallholder agriculture versus large-scale agriculture. However this vision fails to take into account the variety of agriculture systems that co-exist around the world and the technologies and best practices that can be shared by farmers at different scale. The roundtable discussion will present a study on best practices in agriculture in Latin America as a basis for discussion regarding which practices can be shared and scaled up to improve sustainability and enable smallholder farmers to take advantage of market and regional integration opportunities.	CropLife International	
Social justice for future generations	15/06/2012	11:30:00	T-8 (Riocentro)	People from around the world will be watching for their leaders to make the right decisions at Rio which bring dignity, wellbeing and prosperity to all, and in so doing sets a strong legacy for generations to come. This event brings together a broad perspective, to hear from high level speakers sharing their views on safeguarding a sustainable future - an essential requirement to ensure a meaningful outcome at Rio+20. We will discuss the possible Rio outcomes and what they mean for child and youth representatives (Rio+twenties, terre des hommes) , representatives of networks committed to social justice (Social Watch), the rights of nature (Earth Charter Initiative), practitioners in the field of future generations (Ombudspersons) and internationally recognized authorities on future justice governance (The Elders, World Future Council).	World Future Council	
Mainstreaming Organic Agriculture as a Means of Implementation	15/06/2012	11:30:00	T-6 (Riocentro)	Governments with established organic green economies and effective enabling policies that support sustainable agriculture and which address hunger and poverty will share their experiences. UN agencies and humanitarian organizations will outline how organic practices can unlock the potential of smallholder farmers for rural development and food and nutrition security. International volunteer organizations will present the case for integrating skilled volunteers into implementation strategies. IFOAM, the world?s organic farming umbrella organization, with 870 member organizations in 120 countries will confirm its contribution to the outcome of Rio+20 by outlining how it will facilitate the transition by systematically making its global networks and policy and technical expertise readily available to stakeholders. The panel will explore how Rio+20 can accelerate the uptake of organic agriculture including through its mainstreaming into policies and initiatives such as CAADP, CSA, Zero Net Land Degradation, Purchase for Progress, Zero Hunger Programs and global research programs.	International Federation of Organic Agriculture Movements (IFOAM)	
Green Economy and Equity	15/06/2012	11:30:00	T-3 (Riocentro)	By many, the concept of Green Economy is seen as a major milestone towards a sustainable development. On the other hand, lot of NGOs have expressed deep concerns. In their view the discussions on Green Economy in the Rio+20 preparation process contribute to narrowing the idea of sustainable development to a one-sided concept that especially lacks equity, social justice and human rights. The Side Event will present the various views and discuss pathways to implement sustainable development in a way that integrates social equity, eco-justice and the preservation of the environment.	Evangelischer Entwicklungsdienst (EED)	
Economic and policy drivers of deforestation of the Brazilian Amazon	15/06/2012	11:30:00	T-10 (Riocentro)	This side event aims at reviewing the recent economic and social drivers of the deforestation in the Brazilian Amazon region, as well as analyzing to which extent environmental policies have been effective in decreasing deforestation rates recently. New policy proposals that combine forest conservation and sustainable use with socioeconomic development and a greener economy in the Amazon will be discussed. The event starts with an introduction to policies that are in place to combat illegal forest loss and follows with presentations of new research results based on quantitative analyses of deforestation dynamics and their empirical linkages with economic variables and environmental regulations. Panelists will engage the audience in a debate focusing on potential ways to enhancing the effectiveness of forest conservation policies against the backdrop of social and economic development of the region as well as Brazil?s pledge to achieve the ambitious conservation targets proposed in Copenhagen.	Institute for Applied Economic Research (Instituto de Pesquisa Economica Aplicada) - IPEA	
Green Jobs: a chance for Youth!	15/06/2012	11:30:00	T-4 (Riocentro)	Youth are faced with unprecedented levels of unemployment. But the prospects of greening economies now offer potential for a wide range of new jobs to be created. The challenge is to seize the major opportunities for decent work the emerging new green sectors and by making existing jobs both more decent and greener at the same time. A sharper focus on youth may prove to be an important accelerator for making progress on all three dimensions of sustainable development. Significant progress can be made in poverty eradication and social inclusion by making green jobs a reality The side event would pave the way for a global partnership for green jobs, scaling up existing efforts, identifying the policy levers and crafting a global funding mechanism.	United Nations Environment Programme (UNEP)

A common framework to attain the full potential of forests for SD	15/06/2012	13:15:00	T-6 (Riocentro)	Forests are a critical link in the transition to a green economy. Forests with their products and services have the potential to contribute to overcoming global challenges, such as poverty, water scarcity, need for employment, renewable energy, low-carbon economy, climate change and biodiversity loss. Yet realizing this potential requires the mainstreaming of proven mechanisms such as forest certification that promote and provide evidence of responsible forestry. Moreover, special attention must be paid to the some 25% of the world?s forests that are locally managed by families, communities and indigenous peoples. These groups face distinct challenges in accessing direct, tangible benefits from their forest resources and their ability to contribute to a green economy. This event presents framework conditions to guide forest certification and forest stakeholders, with a specific focus on the role of locally controlled forestry	Programme for the Endorsement of Forest Certification (PEFC) International

Sustainable Transport in the Cities of the Future	15/06/2012	13:30:00	Riocentro	Presenting: Holger Dalkmann, Director EMBARQ	WRI	Holger Dalkmann
Contributing to the greening of economies and poverty alleviation	15/06/2012	13:30:00	T-3 (Riocentro)	Global efforts towards green economies and addressing poverty are sensitive to weather and climate variability and change. Development targets are at risk as food production, food security, disaster risk reduction, health epidemics, access to water, energy, tourism, etc., in many countries are dominated by weather and climate. Use of scientifically sound climate services can support better climate risk management, and in taking advantage of climate opportunities to increase productivity and promote sustainable development. There is a significant gap between needs for climate services and their current provision, particularly in least developed and developing countries. Present capabilities to provide climate services do not exploit all we know about climate, and are not delivering their full potential benefits. This event, organized by the World Meteorological Organization and partner UN agencies will provide information on the contribution of the Global Framework for Climate Services in support of greening of economies and poverty reduction	World Meteorological Organization (WMO)	
Global Governance Mechanisms for Boosting Green Innovation	15/06/2012	13:30:00	P3-C (Riocentro)	It is expected that the Rio+20 Conference on Sustainable Development will lead to stronger political commitment by countries, major groups and international organizations for forging a credible institutional framework for a more sustainable development across the globe. Policies and action plans need to be formulated to steer the mainstream economy towards a greener path that can address the twin challenges of climate change and eradication of poverty. However, we need more innovation capacity to generate tools and mechanisms to transform broad concepts into practical results for the implementation of such commitments. This side event will discuss how we can develop international mechanisms to boost the capacity of societies to innovate in order to achieve the goals of sustainable development.	United Nations University (UNU)	
Voices from Asia Pacific: Just and Sustainable Development Goals for Women	15/06/2012	13:30:00	T-5 (Riocentro)	This event will explore what a feminist, rights-based approach to development might look like. It will consider possible rights-based, sustainable and just development goals particularly relevant to Asia Pacific rural and indigenous women by assessing the progress and gaps for the last 20 years. Despite rural and indigenous women of Asia Pacific being most affected by unsustainable growth models of development, they are rarely the architects of global development policies. Yet rural and indigenous women have significant knowledge around sustainable practices and their development needs. This panel draws from a series of consultations with rural and indigenous women of Asia Pacific to propose some development indicators that are focused on the sustainable enjoyment of human rights where human rights principles of equality, non-discrimination, participation and representation, transparency and accountability, international cooperation and solidarity determine people?s development.	Asia Pacific Forum on Women, Law and Development (APWLD)	
TEEB for Water and Wetlands	15/06/2012	13:30:00	P3-B (Riocentro)	The Millennium ecosystem assessment (MA, 2005) presented a solid evidence base on the loss of wetlands and associated loss of ecosystem services. This was a seminal piece of work, clarifying to the biodiversity community, and wider scientific establishment, the need for action. There was, however, insufficient policy response.	Ramsar Convention	

Sustainable Transport in the Cities of the Future	15/06/2012	13:30:00	T-9 (Riocentro)	This Side Event will provide an expert view from leading practitioners from the field of sustainable mobility in developed countries and emerging economies, and will conclude with proposals on including this topic in the outcome document of Rio+20. The Side Event will focus on sustainable transport in citites, to correspond to the secttion on citieis in the Zero Draft document. Partners are from the global public transport sector (metro, bus, railways), project specialists and research institutes. This Side Event would offer delegates the opportunity to cover all the key issues of sustainable mobility in cities in one single event.	International Union of Railways (UIC)	
Sustainable Development index methodology-possible options	15/06/2012	13:30:00	P3-E (Riocentro)	During the Rio Summit in 1992 it was decided to develop a Sustainable Development Index in the coming years. Countries and international organizations were invited to make their contribution. This target has not been fully achieved during the last 20 year. Several multi-stakeholders consultation processes conducted in Armenia within the framework of Rio + 20 preparation, analysis of different thematic and assessment reports, including Human development report and others. Experts? observations have revealed that those assessments and statement on the progress achieved doesn?t necessarily reflect the country?s reality. Taking into consideration that Armenia was one of the first countries piloting calculation of SD indexes, the Armenian Government decided to update the existing set of SD indicators and to present the country?s approaches to the issue at the side-event during the RIO+20 Conference, based on its own experience and recent achievements across the globe.	ARMENIA	
Community Enabled Sustainable Development	15/06/2012	13:30:00	T-10 (Riocentro)	Building the case for an integrated and collaborative model of Community Development for Urban or Rural community upgrading. By making available: Capital through Micro-Financing, Highly Efficient Housing with very low power requirements, Safe Water, Improved Food Production, and Efficient Energy Systems communities can be upgraded and set on the path to long term sustainability with income generating opportunities, low power consumption and higher plant yields. Providing the tools for these mechanisms is the most effective way to reduce poverty and change the living condition of families for generations. In this model the community is provided the tools, technology, training, and skills needed to set a new direction for their future	Global 2000 (2012) International	
How to create an equitable and sustainable green economy	15/06/2012	13:30:00	T-2 (Riocentro)	One of the main topics at the World Summit on Sustainable Development in Rio in June is green economy. But what should a green economy include? And how can a green economy lead to an equitable sustainable development? These two questions will be discussed at a side event arranged by the Danish 92 Group, Oil Change International and a group of other NGO representatives. The discussion will be lead by examining some of the key perspectives in the publication ?Building an Equitable Green Economy?publiced by the Danish 92 Group as an input to Rio+20, which is identifying elements of the green economy as a tool for sustainable development and provides a framework that assess the outcomes of Rio+20. Further, it presents five working principles that will be put in the context of the current discussions on Rio+20.	Danish 92 Group	
Commerce Environnement & Developpement	15/06/2012	13:30:00	T-4 (Riocentro)	Les problèmes environnementaux liés au commerce international posent une série de difficultés. L?un des principaux défis est le problème d?accès aux marchés internationaux aussi bien pour les produits agricoles que pour les produits industriels. Ces défis se manifestent concrètement à travers les subventions, les barrières techniques et les mesures sanitaires et phytosanitaires, entre autres. La situation du continent est d?autant plus difficile dans ce domaine, que peu de pays, sinon aucun, participent aux enceintes internationales d?élaboration des normes et standards internationaux en matière environnementale. Les règles qui naissent de ces processus ne sont pas toujours favorables à l?accès des produits africains aux marchés des pays du Nord. Que ce soit pour les normes sanitaires ou phytosanitaires ou encore pour l?écoétiquetage, les pays africains ont besoin d?une assistance technique renforcée pour se garantir la mise en ?uvre technique des normes internationales.	ENDA Tiers Monde	

The Future We Want: Biodiversity in the Sustainable Development Goals	15/06/2012	13:30:00	T-5 (Riocentro)	Biological diversity underpins ecosystem functioning and provides for food security, human health, the provision of clean air and water; it contributes to local livelihoods, and economic development, and is essential for the achievement of the Millennium Development Goals, including poverty reduction. The Strategic Plan for Biodiversity 2011-2020, adopted by the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD) in 2010, and later endorsed by the 66th session of the United Nations General Assembly, sets out a vision for a world of "Living in harmony with nature" where "By 2050, biodiversity is valued, conserved, restored and wisely used, maintaining ecosystem services, sustaining a healthy planet and delivering benefits essential for all people." The strategic plan and its vision represent a long-term plan that supports the three pillars of sustainable development. The side event will outline these linkages and a vision for the way forward	Secretariat of the Convention on Biological Diversity (CBD)	
Securing a sustainable and equitable future for all post-Rio+20	15/06/2012	13:30:00	T-6 (Riocentro)	This side event offers both inspiration and transferable learning from local, national and international initiatives that are demonstrating a green economy in practice using the One Planet Living sustainability approach, framework and 10 guiding principles. In particular, Sustainable Development Goals and National Implementation Plans are being considered as important outcomes of Rio+20. Therefore governments will explain how their thinking is evolving with regard to developing and implementing SDGs and National Plans, and how they see the links to civil society and business, and the One Planet Living framework. There will be a number of commitments being made by civil society, business and governments for post- Rio+20 implementation: Presentations and commitments will be made by the governments of Belgium, Colombia and Kenya, multinational retailer Kingfisher plc, globally recognised planners and developers from Portugal and China- Pelicano and China Merchants Property Developer (CMPD), South America?s largest refridgeration supplier Imbera and international social enterprise BioRegional. But what should a green economy include? And how can a green economy lead to an equitable sustainable development? These two questions will be discussed at a side event arranged by the Danish 92 Group, Oil Change International and a group of other NGO representatives. The discussion will be lead by examining some of the key perspectives in the publication ?Building an Equitable Green Economy?publiced by the Danish 92 Group as an input to Rio+20, which is identifying elements of the green economy as a tool for sustainable development and provides a framework that assess the outcomes of Rio+20. Further, it presents five working principles that will be put in the context of the current discussions on Rio+20.	Danish 92 Group	
Commerce Environnement & Developpement	15/06/2012	13:30:00	T-4 (Riocentro)	Les problèmes environnementaux liés au commerce international posent une série de difficultés. L?un des principaux défis est le problème d?accès aux marchés internationaux aussi bien pour les produits agricoles que pour les produits industriels. Ces défis se manifestent concrètement à travers les subventions, les barrières techniques et les mesures sanitaires et phytosanitaires, entre autres. La situation du continent est d?autant plus difficile dans ce domaine, que peu de pays, sinon aucun, participent aux enceintes internationales d?élaboration des normes et standards internationaux en matière environnementale. Les règles qui naissent de ces processus ne sont pas toujours favorables à l?accès des produits africains aux marchés des pays du Nord. Que ce soit pour les normes sanitaires ou phytosanitaires ou encore pour l?écoétiquetage, les pays africains ont besoin d?une assistance technique renforcée pour se garantir la mise en ?uvre technique des normes internationales.	ENDA Tiers Monde	
The Future We Want: Biodiversity in the Sustainable Development Goals	15/06/2012	13:30:00	T-5 (Riocentro)	Biological diversity underpins ecosystem functioning and provides for food security, human health, the provision of clean air and water; it contributes to local livelihoods, and economic development, and is essential for the achievement of the Millennium Development Goals, including poverty reduction. The Strategic Plan for Biodiversity 2011-2020, adopted by the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD) in 2010, and later endorsed by the 66th session of the United Nations General Assembly, sets out a vision for a world of "Living in harmony with nature" where "By 2050, biodiversity is valued, conserved, restored and wisely used, maintaining ecosystem services, sustaining a healthy planet and delivering benefits essential for all people." The strategic plan and its vision represent a long-term plan that supports the three pillars of sustainable development. The side event will outline these linkages and a vision for the way forward.	Secretariat of the Convention on Biological Diversity (CBD)	
Securing a sustainable and equitable future for all post-Rio+20	15/06/2012	13:30:00	T-6 (Riocentro)	This side event offers both inspiration and transferable learning from local, national and international initiatives that are demonstrating a green economy in practice using the One Planet Living sustainability approach, framework and 10 guiding principles. In particular, Sustainable Development Goals and National Implementation Plans are being considered as important outcomes of Rio+20. Therefore governments will explain how their thinking is evolving with regard to developing and implementing SDGs and National Plans, and how they see the links to civil society and business, and the One Planet Living framework. There will be a number of commitments being made by civil society, business and governments for post- Rio+20 implementation: Presentations and commitments will be made by the governments of Belgium, Colombia and Kenya, multinational retailer Kingfisher plc, globally recognised planners and developers from Portugal and China- Pelicano and China Merchants Property Developer (CMPD), South America?s largest refridgeration supplier Imbera and international social enterprise BioRegional.	BioRegional Development Group	

Uma Nova Terra e possivel... mas depende de nossas escolhas	15/06/2012	14:00:00	MAM	Uma jornada que passará por diferentes soluções planetárias para a crise econômica, ambiental, política e acima de tudo a crise da consciência, mostrando que tudo que precisamos para transformar o planeta já está disponível, só precisamos aplicar elas na prática e enxergar tudo de uma forma sagrada.		
Liderança para a Sustentabilidade	15/06/2012	14:00:00	Aterro do Flamengo	A palestra tem o objetivo de capacitar e estimular empresários de MPE às novas exigências de mercado, bem como a importância da sustentabilidade em todo o processo de atendimento. Discorrerá ainda sobre os grandes temas da sustentabilidade empresarial, bem como os seus desafios apontando que a liderança, na perspectiva da sustentabilidade, avalia, minimiza ou até elimina impactos negativos no negócio.	Palestrante: Ricardo Voltolini	SEBRAE
Oportunidades da Economia Verde em Pernambuco	15/06/2012	14:00:00	Parque dos Atletas	A partir da contextualização do processo de desenvolvimento em curso em Pernambuco, se destacará as estratégias de planejamento integrado e visão sistêmica frente as novas áreas da economia verde no Estado, enfatizando as políticas ambientais, a atuação em rede, as novas tecnologias, a implementação das unidades de conservação e os novos empreendimentos sustentáveis. Destaque será dado para o projeto de lei Pernambuco Sustentável que tem como objetivo estimular a eficiência de gestão nas áreas hídrica e energética, oferecendo incentivos fiscais para projetos relacionados a fontes de energia renováveis. Evento aberto ao público. Palestrantes: Sérgio Luis de Carvalho Xavier – Secretário de Meio Ambiente e Sustentabilidade do Estado de Pernambuco. Integrating the social dimensions of green economy into policy	15/06/2012	15:30:00	T-8 (Riocentro)	The preparatory process for Rio+20 has called for renewed attention to the social dimensions of development. However, the green economy and sustainable development debates have largely been dominated by economic and environmental concerns. This side event brings together policy-relevant lessons from recent research by UNRISD, UNESCO and ISSC with a focus on how narratives both reflect and shape social change. Sustainability calls for judgements about connections between heterogeneous beings linked by diffuse and uncertain connections. Achieving sustainability depends on a strong knowledge base, effectively deployed, but it cannot be thought of purely in technical or epistemic terms. What is required is a reflexive relation between agents accepting responsibility for the very long-term effects of their actions and the non-humans and systems to which they relate. Sustainability thus calls into question both identity and orientation in the world. This means that sustainability cannot be achieved without being imagined, and cannot be imagined without being inscribed in narratives. The side event will focus on an alternative narrative of sustainable development emphasizing the gaps and barriers that need to be overcome in order for the social dimensions	United Nations Research Institute for Social Development (UNRISD)	
Connecting the dots: science, the IPCC and the policy picture	15/06/2012	15:30:00	T-10 (Riocentro)	Policy-makers need to base their decisions on firm foundations. This is particularly important when addressing complex environmental, economic and social issues such as climate change. The IPCC was founded in 1988 to prepare a comprehensive and unbiased assessment of the risks of anthropogenic climate change, which provided the basis for the United Nations Framework Convention on Climate Change (UNFCCC) and it continues to provide scientific and technical information to support the Convention. The importance of IPCC assessments for the UNFCCC was highlighted in the Durban decisions and the IPCC?s rigorous assessment process has become a template for science-based assessments work. Besides comprehensive assessment reports, the IPCC produces special reports on emerging and other issues relevant for policy implementation and risk management at a country level. An examination of two recent special reports will take two of the key themes of the Conference, disaster risk reduction and energy, as examples.	Intergovernmental Panel on Climate Change (IPCC)	
On Right to Water, Green Economy and Right based approaches to Sustainable Development	15/06/2012	15:30:00	T-3 (Riocentro)	The planet is facing multiple environmental crises and many of them mediated through water. The escalating water challenges result in human communities without access to water for their basic livelihood needs and ecosystems and species that suffer destruction and extinction. Globalized industrial agri-food systems are a big part of the problem. An essential component of effective, sustainable water governance is right to water ? right to water to meet the basic needs of people and to help ensure ecosystem sustenance locally. By contrast, our environmental laws permit a ?race to the bottom? system that legalizes pollution and over-diversion. Legal recognition of rights of people, waterways, and species to water for life and well-being is necessary, to help guide new governance systems that encourage respectful use of water rather than a system that is based on commodification of nature, to ensure the security of current and future generations of people and species.	Institute for Agriculture and Trade Policy (IATP)	
Using markets to supply ecosystem services: how to make it happen?	15/06/2012	15:30:00	T-9 (Riocentro)	"Biodiversity markets are on [the] trajectory from futuristic to unremarkable." - State of Biodiversity Markets (2010) The need to protect ecosystem services (ES) is well recognised, but existing approaches have failed to stem their decline. One option is to rely on a market to 'price' these valuable services and provide a more sustainable level. Which ecosystem services are best fitted for market based measures, and what principles should the measures rely on? FORES presents the results of their report ?Using markets to supply ecosystem services: how to make it happen and invites a broader discussion on the opportunities and challenges of using environmental markets to improve the supply of ES.	Forum for Reforms Entrepreneurship and Sustainability (FORES)	
Engaging the private sector and catalysing change: a focus on REDD+	15/06/2012	15:30:00	T-4 (Riocentro)	Natural capital - our ecosystems, biodiversity and natural resources - is fundamental to the wellbeing and sustainable development of our societies. The annual value of services provided by nature is in the trillions of dollars. Too often, however, financial capital is deployed against natural capital, destroying long-term sustainability of our environment, as well as the human economy. The side event will discuss the impacts that the ?business-as-usual? economic model is having on the planet?s ecosystems, people and biodiversity, as well as innovative ways for engaging private in forest conservation and land based sustainable activities. The barriers to shifting from today?s model to one in which natural capital is more accurately valued will be examined, as will potential pathways towards positive transformation and examples of private sector leadership and potential for replication and scale.	Institute for Conservation and Sustainable Development of Amazonas ? IDESAM	

What Comes Next? An Interactive Dialogue on Youth Movements Beyond Rio	15/06/2012	15:30:00	T-3 (Riocentro)	How can youth capture international momentum toward Rio+20 and cultivate innovative action that builds upon the achievements of Rio+20, while working to address its potential shortcomings? To begin answering this question, this side event will engage young leaders from around the world to share their successes, as well as their concerns, ideas and visions for achieving The Future We Want.	SustainUS	
Framing SD Policy Dialogues: A Well-Prepared Society	15/06/2012	15:30:00	T-6 (Riocentro)	Twenty-first century challenges to global environmental security will require an unprecedented solidarity of purpose and concert of action from a well-prepared global society. Policy-makers are in a position to decide what to do and when to act based upon available evidence and their beliefs about the risks and benefits of a green economy strategy, including the development of institutional frameworks on sustainable development. Currently, we are using 19th and 20th century approaches and models to address 21st century issues. In order to increase the responsive capacity of nation states based upon 21st century models, then governance structures for sustainable development must be created as "learning systems" to understand what is working, what is not, what are the potential options. A successful outcome from Rio+20 would be a systems-wide framework that engages the public where attempts to meliorate one issue can alter or even exacerbate the impacts of another. Engaging the private sector and catalysing change: a focus on REDD+	15/06/2012	15:30:00	T-4 (Riocentro)	Natural capital - our ecosystems, biodiversity and natural resources - is fundamental to the wellbeing and sustainable development of our societies. The annual value of services provided by nature is in the trillions of dollars. Too often, however, financial capital is deployed against natural capital, destroying long-term sustainability of our environment, as well as the human economy. The side event will discuss the impacts that the ?business-as-usual? economic model is having on the planet?s ecosystems, people and biodiversity, as well as innovative ways for engaging private in forest conservation and land based sustainable activities. The barriers to shifting from today?s model to one in which natural capital is more accurately valued will be examined, as will potential pathways towards positive transformation and examples of private sector leadership and potential for replication and scale.	Institute for Conservation and Sustainable Development of Amazonas ? IDESAM	
What Comes Next? An Interactive Dialogue on Youth Movements Beyond Rio	15/06/2012	15:30:00	T-3 (Riocentro)	How can youth capture international momentum toward Rio+20 and cultivate innovative action that builds upon the achievements of Rio+20, while working to address its potential shortcomings? To begin answering this question, this side event will engage young leaders from around the world to share their successes, as well as their concerns, ideas and visions for achieving The Future We Want.	SustainUS	

Framing SD Policy Dialogues: A Well-Prepared Society	15/06/2012	15:30:00	T-6 (Riocentro)	Twenty-first century challenges to global environmental security will require an unprecedented solidarity of purpose and concert of action from a well-prepared global society. Policy-makers are in a position to decide what to do and when to act based upon available evidence and their beliefs about the risks and benefits of a green economy strategy, including the development of institutional frameworks on sustainable development. Currently, we are using 19th and 20th century approaches and models to address 21st century issues. In order to increase the responsive capacity of nation states based upon 21st century models, then governance structures for sustainable development must be created as "learning systems" to understand what is working, what is not, what are the potential options. A successful outcome from Rio+20 would be a systems-wide framework that engages the public where attempts to meliorate one issue can alter or even exacerbate the impacts of another.	Worldview Impact Foundation	
Integrating the social dimensions of green economy into policy	15/06/2012	15:30:00	T-8 (Riocentro)	The preparatory process for Rio+20 has called for renewed attention to the social dimensions of development. However, the green economy and sustainable development debates have largely been dominated by economic and environmental concerns. This side event brings together policy-relevant lessons from recent research by UNRISD, UNESCO and ISSC with a focus on how narratives both reflect and shape social change. Sustainability calls for judgements about connections between heterogeneous beings linked by diffuse and uncertain connections. Achieving sustainability depends on a strong knowledge base, effectively deployed, but it cannot be thought of purely in technical or epistemic terms. What is required is a reflexive relation between agents accepting responsibility for the very long-term effects of their actions and the non-humans and systems to which they relate. Sustainability thus calls into question both identity and orientation in the world. This means that sustainability cannot be achieved without being imagined, and cannot be imagined without being inscribed in narratives. The side event will focus on an alternative narrative of sustainable development emphasizing the gaps and barriers that need to be overcome in order for the social dimensions	United Nations Research Institute for Social Development (UNRISD)	
Connecting the dots: science, the IPCC and the policy picture	15/06/2012	15:30:00	T-10 (Riocentro)	Policy-makers need to base their decisions on firm foundations. This is particularly important when addressing complex environmental, economic and social issues such as climate change. The IPCC was founded in 1988 to prepare a comprehensive and unbiased assessment of the risks of anthropogenic climate change, which provided the basis for the United Nations Framework Convention on Climate Change (UNFCCC) and it continues to provide scientific and technical information to support the Convention. The importance of IPCC assessments for the UNFCCC was highlighted in the Durban decisions and the IPCC?s rigorous assessment process has become a template for science-based assessments work. Besides comprehensive assessment reports, the IPCC produces special reports on emerging and other issues relevant for policy implementation and risk management at a country level. An examination of two recent special reports will take two of the key themes of the Conference, disaster risk reduction and energy, as examples.	Intergovernmental Panel on Climate Change (IPCC)	
On Right to Water, Green Economy and Right based approaches to Sustainable Development	15/06/2012	15:30:00	T-3 (Riocentro)	The planet is facing multiple environmental crises and many of them mediated through water. The escalating water challenges result in human communities without access to water for their basic livelihood needs and ecosystems and species that suffer destruction and extinction. Globalized industrial agri-food systems are a big part of the problem. An essential component of effective, sustainable water governance is right to water ? right to water to meet the basic needs of people and to help ensure ecosystem sustenance locally. By contrast, our environmental laws permit a ?race to the bottom? system that legalizes pollution and over-diversion. Legal recognition of rights of people, waterways, and species to water for life and well-being is necessary, to help guide new governance systems that encourage respectful use of water rather than a system that is based on commodification of nature, to ensure the security of current and future generations of people and species.	Institute for Agriculture and Trade Policy (IATP)	
Using markets to supply ecosystem services: how to make it happen?	15/06/2012	15:30:00	T-9 (Riocentro)	"Biodiversity markets are on [the] trajectory from futuristic to unremarkable." - State of Biodiversity Markets (2010) The need to protect ecosystem services (ES) is well recognised, but existing approaches have failed to stem their decline. One option is to rely on a market to 'price' these valuable services and provide a more sustainable level. Which ecosystem services are best fitted for market based measures, and what principles should the measures rely on? FORES presents the results of their report ?Using markets to supply ecosystem services: how to make it happen and invites a broader discussion on the opportunities and challenges of using environmental markets to improve the supply of ES.	Forum for Reforms Entrepreneurship and Sustainability (FORES)

Resíduos podem ser valiosos	15/06/2012	16:00:00	Parque dos Atletas	Valorização dos resíduos – a parceria internacional em Borås baseia-se na cooperação entre as universidades, Conselho Municipal e negócios em um conceito de hélice tripla. Este conceito tem sido um elemento-chave na cidade de Borås, Suécia, para estabelecer uma gestão sustentável de resíduos, com apenas um por cento dos resíduos sendo colocado em aterros. Nesta cooperação, o conceito de tripla hélice é o elemento-chave, bem como para os nossos parceiros cidades/países. Este contribui para uma solução sustentável a longo prazo para a gestão de resíduos, começando por educar a competência local, através de mapeamento e planejamento, até a construção e garantia de qualidade. O conceito se estende para além do simples lançamento de instalações adaptadas para as necessidades locais, para assegurar o funcionamento contínuo. Evento aberto ao público. Palestrantes: Jessica Magnusson (SP Technical Research Institute of Sweden)	Embaixada da Suécia.	Jessica Magnusson
Lançamento da Coletânea do Ciclo de Palestras e Debates para a Rio+20	15/06/2012	16:00:00	Parque dos Atletas	Considerando a importância da Rio+20, foram elencados 5 eixos de discussões nas 5 regiões do País: Biomas, Recursos Hídricos, Meio Ambiente Urbano, Energia e Segurança Alimentar. As discussões desses temas foram orientadas segundo os dois eixos básicos da Rio+20: a economia verde no contexto do desenvolvimento sustentável e da erradicação da pobreza; e o arcabouço institucional para o desenvolvimento sustentável. Evento aberto ao público. Palestrantes: Deputado Sarney Filho (PV-MA)/Presidente da Comissão de Meio Ambiente e Desenvolvimento Sustentável, Deputado Marco Maia (PT-RS)/Presidente da Câmara dos Deputados, Deputado Ricardo Tripoli (PSDB-SP)/Relator da Subcomissão Rio+20, parlamentares e ONGs. Sustainable Development in International Courts and Tribunals	15/06/2012	17:30:00	T-10 (Riocentro)	Since the 1992 Earth Summit, international courts and tribunals have become an important part of the institutional framework for sustainable development. Institutions such as the International Court of Justice, the Inter-American Court of Human Rights and the WTO Dispute Settlement Body, have resolved disputes using key principles of sustainable development law such as integration, equity, precaution and common but differentiated responsibility. This CISDL legal experts panel, drawing on a decade of legal research by the International Law for Sustainable Development Partnership (ILSD) launched at the 2002 World Summit on Sustainable Development, will explain the implications of recent judgments for sustainable development. Legal experts from both developing and developed countries will also identify emerging trends in sustainable development law. The event launches an online resource, a new Legal Working Paper Series on Sustainable Justice, and the next decade of the ILSD Partnership, with tools for legal analysis and compliance.	Centre for International Sustainable Development Law (CISDL)	
Transparency and disclosure in the green economy	15/06/2012	17:30:00	T-5 (Riocentro)	This event explores how cities and the private sector can work together to create change on the ground, in the context of transparency and disclosure required for a green economy.	Carbon Disclosure Project	
Green Procurement: a cross cutting strategy for green growth	15/06/2012	17:30:00	T-9 (Riocentro)	Why focus on Procurement? Because purchases by governments of goods, services and works account for 15-19% of GDP in industrialised countries and even more in emerging economies. When such large scale demand begins to specify that goods and services are produced in a sustainable manner, public procurement becomes a strong market incentive for green investment, innovation, production and growth. Global markets are also placing increasing expectations on private finance initiatives (PFIs) as a viable tool for green growth. PFIs are formal contractual agreements between the state and the private sector that crowd in private sector capital in procurement or commissioning of public infrastructure and services. While governments are looking to this model to crowd-in capital and share risks of infrastructure expansion, they are overlooking fact that PFIs will only deliver value for money, for both investor and public purse, if they are approached and designed as a long-term sustainable investment.	International Institute for Sustainable Development (IISD)	
ESD as Driver of Change towards a Green Economy	15/06/2012	17:30:00	P3-F (Riocentro)	Commenting on the role of Education for Sustainable Development (ESD) Irina Bokova, UNESCO Director General mentioned that ?ESD promotes the values and knowledge necessary to help women and men to cope with change, complexity and uncertainty, to adopt new consumption patterns, and to transform mindsets and behaviors? . When it comes to promoting ideas of sustainable development and green economy, education remains one of the most important short term, as well as long term tool we possess that can influence existing institutions or create new ones. The Government of India, recognizing the importance of environmental education as far back as in 1984, had facilitated the creation of the Centre of Environment Education (CEE) as a Centre for Excellence. Since then CEE has expanded and has initiated and implemented numerous innovative ESD programmes across India, partnering with various UN such as UNESCO, UNEP, UNDP, WHO etc. accumulating a plethora of enlightening experiences and learnings	Centre for Environment Education	
Low Carbon Agriculture	15/06/2012	17:30:00	T-3 (Riocentro)	The Low Carbon Agriculture Program (LCAP) is an activity under the Brazilian National Policy on Climate Change, established in 2009. The LCAP is a relevant tool to boost the green economy in the context of sustainable development and poverty eradication, creating projects for promoting integrated farming systems, rehabilitation of degraded pastures, organic agriculture, processing of animal waste, no-tillage planting, fixing biological nitrogen and other sustainable agricultural initiatives.	Brazil

Programa Estadual de Ampliação da Cobertura Florestal - REFLORESTAR	15/06/2012	18:00:00	Parque dos Atletas	O Programa Reflorestar é uma iniciativa governamental cujo desenvolvimento foi iniciado no ano de 2011, fruto do alinhamento da Secretaria Estadual de Meio Ambiente e Recursos Hídricos (SEAMA) e da Secretaria Estadual de Agricultura, Aqüicultura e Pesca (SEAG).Alinhado com a meta de aumento da cobertura florestal proposta pelo Estado do Espírito Santo, de alcançar 16% até o ano de 2025, o que corresponde a um incremento de cerca de 230.000 ha de novas áreas florestadas (5% da área do Estado) e com investimentos de R$ 160 MM o Programa Reflorestar irá recuperar 30 mil hectares até 2014, possibilitando o cumprimento de 13% da meta prevista para 2025. O Programa Estadual de Ampliação da Cobertura Florestal tem como objetivo manter, recuperar e ampliar a cobertura florestal, com geração de oportunidades e renda para o produtor rural. Tem como desafio criar estrutura que permita ao Estado obter avanços concretos na ampliação da cobertura florestal, tendo como meta 30 mil hectares até 2014. Evento aberto ao público. Aqualume	15/06/2012	19:00:00	Lagoa Rodrigo de Freitas	O Movimento CYAN, da Ambev, promove o Aqualume, festival cultural para conscientizar a população sobre o uso racional da água. O evento acontecerá paralelamente à Conferência das Nações Unidas sobre Desenvolvimento Sustentável Rio+20, de 15 a 24 de junho, às margens da lagoa Rodrigo de Freitas, no Rio de Janeiro. O objetivo do Aqualume é aproximar a população da discussão sobre o destino dos recursos naturais, tema que é um dos pontos de debate mais aguardados para a Conferência. O evento será aberto ao público e funcionará das 19h às 23h. Aos domingos, 17 e 24/6, haverá atrações especiais para as crianças a partir das 16h. São esperadas cerca de cinco mil pessoas por dia. Com uma tecnologia inovadora, uma tela d'água de 600m², criada a partir de uma bomba submersa, será instalada na lagoa. Serão exibidos animações, curtas-metragens, clipes musicais, fotografias, além de conteúdos relacionados à sustentabilidade. A programação do Aqualume conta ainda com apresentações musicais, teatrais e circenses e atividades educativas. "Nosso objetivo é trazer o debate de questões fundamentais para o desenvolvimento sustentável do planeta para o dia a dia das pessoas. Com a iniciativa nós queremos estimular o uso racional da água e engajar a população nessa causa", afirma Ricardo Rolim, diretor de relações socioambientais da Ambev. Festival Consciente pela Água O Aqualume promoverá o Festival Consciente pela Água, um concurso que vai premiar os autores dos melhores vídeos sobre o uso racional da água. Os vencedores ganham um iPad 2 e têm seu material exibido no telão d'água. Qualquer um pode participar e os vídeos podem ser enviados até o dia 10 de junho. Todas as informações para participar do Festival estão no site www.aqualume.com.br. Os vídeos serão julgados por uma banca interna especializada, que avaliará critérios como: adequação ao tema, criatividade e qualidade de produção do material. Apresentações artísticas O Aqualume vai proporcionar ao público uma série de atrações artísticas na Lagoa. Será	Rodrigo Moccia, Relações Corporativas Ambev.

Fórum de Sustentabilidade Empresarial da Rio+20 – Inovação e Colaboração para o Futuro que Queremos	15/06/2012	???	Windsor Barra Hotel	O Fórum de Sustentabilidade Empresarial da Rio+20 busca trazer maior alcance e qualidade para a sustentabilidade corporativa e produzir um número significativo de compromissos corporativos para o avanço do desenvolvimento sustentável em todo o mundo. Com 2.000 CEOs e outros participantes esperados, além de uma agenda ambiciosa focada na inovação e em parcerias transformadoras, o Fórum será uma vitrine da ação empresarial e da liderança em apoio à agenda da Rio+20.		
No Roads to a Green Economy - Mapping the Earth's Roadless Areas and their Services	15/06/2012	14:15:00PM	Parque dos Atletas	Roadless areas are large areas inaccessible by people through mechanical means, free from hard surfaced roads, paved highways, and high quality roads, which allow for large-scale resource extraction. Roadless areas are un-fragmented areas with high natural value where small access roads, waterways and/or unpaved road networks do exist, allowing local communities to transport, travel and trade. The delineation of roadless areas is as a new conservation tool in the hands of governments to fight biodiversity loss, ecosystem services degradation, climate change and poverty, while safeguarding the direct benefits delivered to the indigenous communities through the continuous sustainable use of their natural resources. Biodiversidade e Gestão do Meio Urbano: BiodiverCIDADE: como considerar a biodiversidade na gestão do meio urbano?	15/06/2012	11:00:00	Arena da Barra	A atividade urbana implica em uma série de impactos ambientais que podem tanto estar dentro quanto fora da cidade. Estes impactos estão ocorrendo em um ritmo crescente nunca visto antes na história da humanidade. Tradicionalmente a gestão urbana tem em sua agenda a solução de problemas ambientais relacionados ao saneamento e poluição do ar, por exemplo. Mais raramente, a agenda local inclui questões ambientais que extrapolam o nível local como a biodiversidade.	Universidade Tecnológica Federal do Paraná - UTFPR	
Viver carioca no século XXI: uma experiência inovadora nas favelas do Rio de Janeiro	15/06/2012	11:00:00	Arena da Barra	O objetivo da discussão é apresentar formas de transformação do espaço urbano, com soluções inovadoras, criativas, singulares, abertas à diversidade e propícias às trocas, valorizando as características intrínsecas e a população local como ator econômico. Arena Socioambiental	16/06/2012	9:00:00	MAM	Levar ao mundo estratégias brasileiras bem sucedidas de combate à pobreza e às desigualdades sociais no contexto do desenvolvimento sustentável. Esse é um dos objetivos da Arena Socioambiental, espaço privilegiado de diálogo do governo brasileiro com a sociedade civil na Rio+20. Montada nos pilotis e jardins do Museu de Arte Moderna (MAM) do Rio de Janeiro, a Arena será palco de exposições, atividades culturais e feira de produtos da sociobiodiversidade brasileira entre os dias 16 e 22 de junho. Também abrigará dois grandes debates por dia, com transmissão ao vivo e interativa pela internet. O acesso é livre. Durante o evento, o governo brasileiro vai reforçar a sua posição de que o desenvolvimento sustentável só é possível com inclusão social e combate à pobreza, articulando este tema aos debates sobre desenvolvimento econômico e conservação ambiental. Realizado pelo Ministério do Desenvolvimento Social e Combate à Fome (MDS) e pela Associação Brasileira de Promoção de Exportações e Investimentos (Apex Brasil), o encontro conta com a participação de 14 ministérios que trazem em sua agenda os temas de inclusão e desenvolvimento social no país. São eles, os ministérios do Meio Ambiente, do Desenvolvimento Agrário, da Saúde, da Educação, da Justiça, da Agricultura, Pecuária e Abastecimento, das Comunicações, da Previdência Social, da Aquicultura e Pesca e da	Ministéro do Desenvolvimento Social

How do we deploy safe and renewable energy or achieve environmental security and sustainability? What must me do to provide social and medical care to those suffering from environmental degradation and emergencies? Statements from the audience and questions and answer sessions will be part of this dynamic interactive event.	Green Cross International (GCI)	
Ideias Justas	16/06/2012	9:30:00	PUC - RJ	O Ideias Justas mostrará o conhecimento e a experiência de profissionais e pesquisadores do mundo todo. Fornecerá um espaço para o diálogo e permitirá a formação de alianças entre vários atores dispostos para explorarem opções para trabalhar juntos. Durante os dois dias, quatro temas gerais serão abordados: Definir soluções para um planeta sustentável, uma urbanização que melhora a qualidade de vida, modelos de negócios para sustentabilidade e transformação dos sistemas econômicos para as pessoas e o planeta. O evento será realizado durante os quatro dias entre as negociações finais preparatórias e a Conferência Rio+20, e fará de tudo para que as suas conclusões estejam presentes na Cúpula e nas discussões posteriores.	Instituto Internacional para Meio Ambiente e Desenvolvimento (IIED)	
Fair Ideas	16/06/2012	9:30:00	PUC - RJ	Fair ideas will provide equal space for practitioners, policymakers, activists, business representatives, researchers and community actors to focus on the key contexts in which significant change is possible, and on what it will take to achieve it. Over the two days, the event will address four broad themes: Shaping Sustainable Development Goals, Urbanisation that improves lives, Business models for sustainability, Transforming economic systems for people and planet. The two-day event will take place during the four 'sandwich days' between the final preparatory negotiations and the summit itself, and we will look to take its key conclusions into the summit, and follow-up discussions.	Instituto Internacional para Meio Ambiente e Desenvolvimento (IIED)

Mudança do clima e florestas no Brasil: o papel das políticas e dos incentivos positivos.	16/06/2012	11:00:00	Parque dos Atletas	Este evento tem como objetivo discutir a potencial contribuição de políticas e incentivos econômicos para o alcance das metas de redução de emissões do desmatamento, estabelecidas pelo Brasil, em sua Política Nacional de Mudança do Clima. Tais incentivos deverão apoiar o objetivo mais amplo do governo brasileiro da promoção do desenvolvimento sustentável e de erradicação da pobreza no país, ao mesmo tempo assegurando a permanência dos estoques florestais no longo prazo. O evento começará com uma breve descrição das políticas vigentes no Brasil, e seguirá com apresentações sobre incentivos positivos utilizados no nível federal e estadual. Serão também apresentadas as avaliações sobre a eficácia de algumas políticas ambientais e seu impacto em termos de mitigação de emissões associadas ao desmatamento e à degradação de florestas. Evento aberto ao público. Palestrantes: Carlos Klink / Secretário / Secretaria de Mudanças Climáticas e Qualidade Ambiental - Ministério do Meio Ambiente (SMCQ/MMA); Brenda Brito do Carmo/ Secretária Executiva / Instituto do Homem e Meio Ambiente da Amazônia (IMAZON); Marco Antonio Fujihara / Diretor / Keyassociados; Jorge Hargrave / Pesquisador / Instituto de Pesquisa Econômica Aplicada (IPEA); Ronaldo Seroa da Motta / Pesquisador / Instituto de	Ministério do Meio Ambiente/Secretaria de Mudanças Climáticas e Qualidade Ambiental. The UN system Perspectives on Green Economy	16/06/2012	11:30:00	T-9 (Riocentro)	The Environment Management Group will present the findings of its report ?Working towards a balanced and inclusive green economy: A UN system-wide perspective" which was prepared to contribute to the Rio+20 Conference. The report prepared by 40 UN entities provides a picture on the UN system wide perspectives on the green economy and how the UN system could coherently support countries in transitioning to a green economy. The report is expected to facilitate a common understanding of the green economy approach and the measures required for the transition.	United Nations Environment Management Group (EMG)	
Green economy as an inducer of conservation in Brazilian Amazon	16/06/2012	11:30:00	T-8 (Riocentro)	The green economy can be become real from local experiences, through projects that link production with less environmental impact and improving the quality of life of local populations. Whereas less than 1% of Amazon territory in Brazil is urbanized, it is essential to support initiatives in rural or forest ways. The Fundo Vale has supported several projects in the Brazilian Amazon who flock to this effect, to value the forest as a great asset market of the future. Working in network with recognized organizations acting in the Amazon, and international projection, these projects are developed in coordination in areas suffering strong anthropogenic pressure, constantly threatened by illegal logging. The event aims to show some experiments and their results, developed in the states of Pará, Mato Grosso and Amazonas.	Fundo Vale para o Desenvolvimento Sustentavel	

Greening the Games: How Brazil's World Cup is Driving Economic Changes	16/06/2012	11:30:00	T-10 (Riocentro)	The 2014 World Cup involves a combined investment of more than US$114 billion across 12 Brazilian cities for the construction or renovation of 12 football stadiums plus transportation, hotels, and waste and water infrastructure to support millions of fans. As the largest infrastructure project in the country?s history, preparations for the World Cup today will have long-lasting impacts on Brazil?s urban sectors. Planning for the Cup has provided Brazil with an opportunity to achieve sustainable, urban economic development that may not present itself again for decades or possibly centuries. This event will feature a discussion on how World Cup investments can be leveraged for positive, long-term social and environmental benefits in Brazil?s cities, and how urban planning for global sporting events such as the World Cup and the Olympics can be models for sustainable urbanization on a global scale. Key themes: green building, low-carbon transit, green jobs, sustainable financing mechanisms.	Green Building Council Brasil	
Launch: Reflection Group Report on Global Development Perspectives	16/06/2012	11:30:00	P3-6 (Riocentro)	As a response to the multiple global crises, the Reflection Group will launch a comprehensive report that highlights the need for fundamental changes, in particular: ? Changes in fiscal and regulatory policies (at national and international levels) in order to overcome social inequalities and the degradation of nature and to strengthen sustainable economies. ? Changes in institutions and governance mechanisms (at national and international levels). ? Changes in the mindset, the guiding concepts, goals and indicators of development and societal progress. At the side event prominent members of the Reflection Group will present key findings and policy recommendations of this report.	Global Policy Forum Europe	
Sustainable Development and Inter-generational Equity Issues Dialogue	16/06/2012	11:30:00	T-4 (Riocentro)	The dialogue will be of Panel Discussion and Workshop nature on making a link between Climate Justice, Carbon Debt, Development, and Reparations.	International Youth and Student Movement for the United Nations (ISMUN)	
The Strategic Plan for Biodiversity 2011-2020	16/06/2012	11:30:00	T-6 (Riocentro)	Protecting Biodiversity and the ecosystem services it provides is at the heart of sustainable development. The Strategic Plan for Biodiversity 2011-2020, adopted in 2010 at the tenth meeting of the Conference of the Parties to the Convention on Biological Diversity (CBD), represents a coordinated and sustained response by governments and the United Nations system to the ongoing loss of biodiversity. In this side event, the Secretariat of the Convention on Biological Diversity, along with its United Nations system partners will outline the mission and vision of the Strategy and show how biodiversity supports achievement of the three pillars of sustainable development. Representatives of the Interagency Task Force for the Strategic Plan for Biodiversity 2011-2020 will speak about the role of the Plan in coordinating actions among stakeholders.	Secretariat of the Convention on Biological Diversity (CBD)	
Feeding the World: Sustainable Agriculture & Innovation	16/06/2012	11:30:00	T-9 (Riocentro)	The challenges to feed the world?s population, which will reach 9 billion by 2050, are unprecedented?requiring more than a second green revolution. With climate change, global yields in 2050 could decrease by 20-30 percent if we cannot bring good agricultural practices, new technologies, farming methods, and supporting institutions to the world?s farmers. ?Sustainable intensification?--a range of approaches for boosting agricultural production while reducing negative environmental impacts on agriculture--will be critical. However, despite the 2008 food crisis and environmental changes, public investments in agricultural research and extension are low. In the context of the ongoing debate as to which potential farming methods and technologies offer the greatest promise for investment and scale up, this panel will examine the contribution of sustainable agriculture sustainable intensification to agricultural productivity and resilience in the near and long term and how this contribution can be estimated and tracked.	International Food Policy Research Institute (IFPRI)	

Re-greening for Resilient Landscapes	16/06/2012	11:30:00	T-5 (Riocentro)	Thematic focus: Land, Water, Biodiversity, Livestock and Livelihoods The drylands are the best chance we have to achieve multiple goals at a scale that has significant and durable impact. Globally, the drylands support 2.1 billion people, with the majority still dependent upon the success of extensive grazing systems and sustainable crop production intensification. Yet, drylands have been considered marginal ? subject to degradation, loss of biodiversity and ineffective water management ? while the people they support have been marginalized. Targeting drylands is key in the march towards sustainable development because of the strong connection between land degradation and desertification and other global issues, including climate change, droughts and floods, famine, poverty and social disruption)	World Vision International

From Rio to Cairo to Rio? and Beyond	16/06/2012	13:00:00	T-2 (Riocentro)	Population dynamics have significant influence on sustainable development. Chapter 5 of Agenda 21 affirms the synergistic relationship between demographic factors and sustainable development, as well as the key role of women?s empowerment and reproductive health, including family planning. The chapter also calls for formulation of integrated national policies for environment and development, taking into account demographic trends and factors. These linkages were emphasized in the International Conference on Population and Development (ICPD) Programme of Action, adopted in Cairo, Egypt in 1994. Virtually all development policies in Sub-Saharan Africa cite population growth as an inhibitor to efforts to alleviate poverty, ensure food security, preserve the environment, and improve the quality of human resources. However, little integration of population dynamics and environmentally sustainable development plans and programs has been achieved. Climate change has become the face of the international discourse on environmental sustainability, and it is increasingly seen as a major threat to sustainable development in Africa.	Population Action International

CUCaA - Construindo o universo através da arte	16/06/2012	13:00:00	Via Pública da Rocinha	Evento de grafite desenvolvido pelo Insituto Wark e GDR - Grafiteiros da Rocinha. O projeto busca conscientizar a comunidade sobre a arte urbana e promover workshops que transformem o grafite em fonte de renda para jovens, por meio da comercialização de objetos customizados. Será realizado workshop na Via Pública da Rocinha (embaixo da passarela da Rocinha), no qual os interessados poderão participar de uma pintura coletiva de uma lona e aprender a grafitar, bem como fabricar peças decorativas. Na ocasião, moradores da comunidade poderão trazer pertences a serem customizados e restaurados. Haverá construção de painéis grafitados, apresentação dos membros do Instituto Wark e do Grupo GDR (Grafiteiros da Rocinha) e interação entre artistas.	Insituto Wark e GDR - Grafiteiros da Rocinha	
The Human right to water and sanitation: The challenge of implementation	16/06/2012	13:30:00	P3-E (Riocentro)	The aim of the Workshop is to check and to evaluate the evolution to local and international level of the Access to the Drinkable Water as human right, from her Firstly Summit of the Earth up to the current importance.	CEDHA (Centro de Derechos Humanos y Ambiente)	
China's Progress on Sustainable Development & Expectations of Rio+20	16/06/2012	13:30:00	T-6 (Riocentro)	There will be a comprehensive introduction of China□fs efforts, progress and challenges in practicing sustainable development within the past decade. There will also be an introduction to the following strategies of China, a clarification of the expectations of the Chinese Government for this conference and its target and subject, and an introduction to the side conferences of Chinese government, and which will also present a video on Chinese national sustainable development	China	
Forests, Livelihoods, and Green Economy	16/06/2012	13:30:00	T-8 (Riocentro)	Taiwan is vulnerable in term of climate change. Three years ago, Taiwan suffered from the havoc of the typhoon Morakot and recovered with the joint efforts by the civil societies and the government. With the successful experience, we aim to shed more light on forests and livelihoods in terms of sustainable development and green economy by holding this □gForests, Livelihoods, and Green Economy□h side event to comply with the goal shown in Rio+20 Briefing#2 and further advance the efforts in sustainable development and forest management□I	Environmental Quality Protection Foundation	

Sustainable Development in the Face of Rapid Climate Change: High Alpi	16/06/2012	13:30:00	T-3 (Riocentro)	Climate change is occurring twice as fast in regions such as the Arctic, Himalayas, Andes, and other alpine areas than in the rest of the globe, placing enormous pressures on the peoples who live there. Many of the communities so impacted comprise indigenous and other communities already often marginalized economically and socially in their societies. How can these communities find a new path towards development in the face of such rapid change, in ways that both preserve traditional ways of live, lead to the meeting of Millennium Development Goals; yet do not contribute even more to the environmental changes already occurring with rapid ?cryospheric? climate change? What are the ?cryosphere-specific? sustainable development measures most helpful to these regions? A panel discussion with representatives and experts from some of the most climate-impacted places on earth.	International Cryosphere Climate Initiative (ICCI)	
Sustainable Public Procurement	16/06/2012	13:30:00	T-10 (Riocentro)	Sustainable Public Procurement is meant to allow preferencial treatment in bidding processes for socio-environmentally correct products with less environmental impact and lower risk to human health. It is related to the acquisition of goods, materials and services whose manufacture, use and disposal incorporate socio-environmentally sustainable standards. Thus, the policy objective is to spread the links between sustainability and government hiring, generating positive impact on the marketplace and promoting new production sectors - the so-called "green economy" (United Nations Environment Programme - UNEP). The objective of the seminar is to present the policy from the perspective of the formulator entity (Ministério do Planejamento), the legal entity (Advocacia-Geral da União) and the audit organ (Tribunal de Contas da União).	Brazil	
Pro-poor Payment for Ecosystems Services: global knowledge networking	16/06/2012	13:30:00	P3-A (Riocentro)	Payment for Ecosystem Services (PES) is increasingly recognized as a tool for sustainable management of natural resources. Although PES was initially intended to achieve conservation goals, the dependence of the majority of rural populations upon local ecosystems have brought about a consideration of PES being designed to be both pro-poor and community-based.This can be achieved by integrating pro-development objectives into thedesign of PES schemes .ICRAF and the consortium WWF/CARE International, for example, proposed an approach of ?pro-poor rewards for environmental services? and ?equitable payments for watershed services? ,with the objective to deliver sustainable natural resource management and improve livelihoods for the rural poor. The use of PES to address both environmental improvement and poverty reduction objectives represents debatable issue for a wider reception of the PES approach.	Regional Environmental Centre for Central Asia (CAREC)	
Women's Leadership in a Green Economy: Valuing Women's Contributions t	16/06/2012	13:30:00	(Riocentro)	Evidence from Indonesia, Cameroon and India presented in the panel demonstrates that empowering women as resource managers and entrepreneurs presents a powerful strategy that can be used to address both local and global environment concerns. But institutional gender blindness renders women?s contributions to climate change mitigation and adaptation invisible, and therefore not valued. National climate change policies and organizations overlook women?s value, in part because of biases that exclude women as leaders. Combined with their lower levels of education, time availability, formal property rights, and technical skills, this has resulted in an exclusion of women?s interests when climate change, REDD+, or renewable energy finance decisions are made. Means of providing value for women?s contributions to sustainable development and the green economy, discussed in the event, can address the risks of further marginalising women and jeopardising environmental sustainability initiatives posed by existing climate change finance mechanisms.	Women Organizing for Change in Agriculture and Natural Resource Management (WOCAN)	
Sustainable Transport Contribution to Rio+20 and its Implementation	16/06/2012	13:30:00	T-5 (Riocentro)	Transport comprises a significant economic sector in most countries and is of particular relevance to the green economy theme of Rio+20 because of its potential for wide-ranging environmental, economic and social development benefits. There is a growing realization that the current rapid unrestrained growth in private motorization while improving access is not sustainable. This side event organized on behalf of the SLoCaT Partnership will present the contribution of the sustainable transport community to the Rio+20 Conference and its implementation. This includes: (a) a Roadmap for Sustainable Transport in the coming years including a set of targets and indicators, (b) voluntary commitments by a group of multilateral development banks as well other stakeholders on sustainable transport, and (c) description of proposed institutional framework for sustainable transport in the post Rio+20 period.	Partnership on Sustainable Low Carbon Transport

Fomentando Cidades Sustentáveis – desafios e práticas	16/06/2012	15:00:00	Parque dos Atletas	A partir da metade do século XX o Brasil se tornou um país urbano, atualmente com 84% das pessoas vivendo nas cidade, sendo que em algumas regiões metropolitanas esse percentual está acima de 95%. No conceito de sustentabilidade, o crescimento das cidades deve vir acompanhado de infraestrutura, habitação, serviços e equipamentos que forneçamos insumos necessários para garanti a qualidade de vida da população. No entanto, nem sempre foi assim, as cidades cresceram de forma irregular e sem planejamento, com seus habitantes, muitas vezes, vivendo em condições precárias. Para reverter esse processo e reduzir o déficit habitacional são necessários investimentos na produção de habitação e em saneamento básico, transporte público e equipamentos, visando minimizar as diferenças sociais e buscar a inclusão dessa população. Desta forma, a CAIXA tem investido na infraestrutura das cidades brasileiras, além de financiar a produção de moradias, inclusive para as famílias de baixa renda, faixa mais afetada pelo déficit habitacional. Além dos investimentos em infraestrutura e habitação, como forma de induzir a sustentabilidade nas cidades, a CAIXA possui o programa Construções Sustentáveis. O programa agrega uma série de ações voltadas à sustentabilidade das edificações, tais como uso de madeira legal, eficiência energética nas habitações, uso de sistemas de aquecimento solar de água, arborização urbana e o Selo	CAIXA	Sergio Besserman; José Urbano Duarte
Agenda 21 na Amazônia Legal: o caso do município de Raposa-MA	16/06/2012	15:00:00	Parque dos Atletas	Agenda 21 na Amazônia, as iniciativas das agendas locais, o estudo de caso do município de Raposa. Promoting Responsible Corporate Conduct: The OECD Guidelines for MNEs	16/06/2012	15:30:00	T-3 (Riocentro)	Last year the international community has advanced in developing standards for responsible corporate conduct, mainly in the field of human rights respect. Examples of these are the OECD Guidelines for Multinational Enterprises who has reviewed and approved the new version of the Guide in May 2011; other is the UN Human Rights Council who approved the Policy Framework (2008) and its Guiding Principles (June 2011) for Human Rights and Transnational Corporations. These are standards approved at an intergovernmental level promoting concrete conduct standards linking the needed implementation of due diligence concept particularly in the field of human rights. The impact to sustainable development that MNEs have is of such important that in many developing countries are practically leading the investments agenda for the country as well. Responsible conduct is required for all 3 pillars of Sustainable Development and for improving a better and green economy pattern in the developing path.	CEDHA (Centro de Derechos Humanos y Ambiente)

Central American community agro-forestry: climate and food security	16/06/2012	15:30:00	P3-B (Riocentro)	Climate change, poverty, energy and water scarcity, natural disasters and food crisis, are issues affecting especially the most vulnerable in the world. Central America is no exception, and a way to face these matters has been through community agro-forestry. Using concrete cases and experiences, we will show how an arrangement of different stakeholders and public-private alliances, government policies committed to sustainable development, south-south cooperation experiences, transparency and accountability, along with community and producers? participation in productive schemes has been a successful combination in Central America. We will show how agro-forestry aides at reducing poverty, creating jobs, guaranteeing food security, using water efficiently and adapting to climate change. Agro-forestry is a clear example that it is possible to produce harmonically with the environment, in a social equitable and economically profitable way. Community agro-forestry is a practical and tangible example of what green economy and sustainable development are about.	Central American Indeginous and Peasant Coordinator of Communal Agroforestry, ACICAFOC	

Agro ecological farming can feed the world: in practice	16/06/2012	15:30:00	T-6 (Riocentro)	Franciscans International (FI), Dominicans for Justice and Peace (DfJP), Ecumenical Advocacy Alliance (EAA), Edmund Rice International (ERI), Good shepherd Sisters Association (GSSA) have extensive networks at the grassroots level and with farmers? organizations throughout the world. Their activities include promoting people-centered development and human rights, and advocating for peace and justice, for just and sustainable production and consumption of food, and for environmental protection. The proposed side event on ?Agro ecological farming can feed the world: Ecologically and socially sustainable agriculture in practice? will demonstrate how agro ecological farming respects the limits of the planet?s ecosystem, integrates traditional knowledge from local communities, reduces waste, and can serve as a means to advance rural communities towards food and technological sovereignty.	Faith based organisations, by Franciscans International	
Oceans for the future - How can we achieve marine reserve targets?	16/06/2012	15:30:00	P3-A (Riocentro)	With Rio +20 comes the opportunity to highlight and reinforce the commitments that nations across the globe have already made to our oceans. A healthy and resilient marine environment is crucial to achieving sustainable development and securing marine resources for present and future generations. Why then has progress towards marine protection been so slow, where are the major gaps and what can realistically be done to fill those gaps and meet international targets? These are all questions the Marine Reserves Coalition (MRC) will be addressing at Rio +20, in light of the vital role healthy oceans play in sustainable development and in the social and economic well-being of human populations across the globe. Bringing together a mixture of scientists, policy experts and decision-makers, the MRC side event will reinforce international targets for marine protection and outline the road to achieving those targets through the designation of marine reserves.	Zoological Society of London	
China: Mobilizing Voluntary Stakeholder Contributions for an Inclusive Green Economy	16/06/2012	15:30:00	T-11 (Riocentro)	The Chinese Association for International Understanding (CAFIU) is a non-profit organization aiming at enhancing mutual understanding and cooperation between China and other countries. For our side event, we will invite roughly seven key speakers from different sectors with presentations of carefully selected best business practices and policies. These speakers will also lead parallel group discussions with attendees at the event. By this we aim to promote intellectual exchanges between China and the international community in terms of transiting to a green economy and alleviating poverty. Confirmed presenters include the representatives from Chinese business sector as well as local authorities, such as Wang Shi, CEO of Wanke Architecture Company and Li Jun, chief of Guiyang City. We have also invited Martin Lees, former Secretary-General of Club of Rome and Xu Kuangdi, vice chairman of 10th Chinese People's Political Consultative Conference, to share their insights.	Chinese Association for International Understanding	
National Learning and Skills Strategies to Advance a Green Transition	16/06/2012	15:30:00	T-8 (Riocentro)	The transition to inclusive, green and climate resilient development creates unprecedented needs, challenges and opportunities for strengthening human resources and skills development. This critical human capacity development dimension of green development has received specific attention in several recent international flagship reports, including: ? the report of the Secretary-General?s High Level Panel on Global Sustainability ?Resilient People, Resilient Planet: A Future Worth Choosing? (2012); ? the 2012 UNEP foresight report ?21 Issues for the 21st Century? (2012); ? the ILO report ?Skills for Green Jobs: A Global View (2011)?; and the ? UN Environmental Management Group (EMG) report ?Working towards a Balanced and Inclusive Green Economy: A United Nations System-wide Perspective? (2012).	United Nations Institute for Training and Research (UNITAR)	
Culture and cultural diversity as the 4th pillar of sustainability	16/06/2012	15:30:00	P3-E (Riocentro)	Culture and Cultural Diversity play an important role in sustainable development. Culture fosters economic growth, helps individuals and communities to expand their life choices, is important to adapt to change and raising the resilience of social-ecological systems. As the Preamble of UNESCO Convention on the Protection and Promotion of the Diversity of Cultural Expressions states ?cultural diversity creates a rich and varied world, which increases the range of choices and nurtures human capacities and values, and therefore is a mainspring for sustainable development for communities, peoples and nations?. Article 13 of the above Convention establishes that ?Parties shall endeavour to integrate culture in their development policies at all levels for the creation of conditions conducive to sustainable development (...)? Despite the importance of culture and cultural diversity and the conventional dispositions, the recognition of their role in sustainable development is not well designed in the international community.	Rio de Janeiro State University (UERJ)	

Democratization of International Relations - Role of UN World Conference	16/06/2012	15:30:00	P3-F (Riocentro)	This Side Event will look at how UN World Conferences have played a key role in shaping the policy and programme priorities of the United Nations, as well as enhancing UN interaction with world civil society and public opinion. Environment and sustainable development issues have been of major significance in the UN world conference processes, drawing in ever more stakeholders. The Side Event will examine their impact on all stakeholders. It will review the follow-up mechanisms - including relevant UN Conventions - created for implementation of World Conference agreements, notably if and how they have secured broad NGO and public involvement in implementation structures. The Side Event will explore lessons for enhanced NGO participation in the follow-up mechanisms to UNCSD Word	Conference of NGOs

Diálogos de Sustentabilidade Global	16/06/2012		Riocentro - Barra da Tijuca	O Governo do Brasil está organizando quatro dias de eventos de diálogo no Riocentro, onde até 50.000 participantes da sociedade civil podem se conectar e compartilhar ideias paralelamente ao programa oficial da ONU. O objetivo é gerar propostas inovadoras de como a sustentabilidade pode ser aplicada a uma série de questões, incluindo segurança alimentar, erradicação da pobreza, crise econômica, energia sustentável para todos, água, oceanos, consumo e produção sustentáveis, inovação e cidades sustentáveis, desemprego, empregos verdes e migração.		
12ª Conferência Bienal da Sociedade Internacional de Economia Ecológica: ISEE 2012	16/06/2012		Hotel Winsor Guanabara	Desde 1990, a conferência trata de economia ecológica e política ambiental. E nesse ano, foi planejado para acontecer durante a Rio+20 e aproveitar o debate sobre economia verde. O nome será Economia Ecológica e a Rio+20 – Contribuições e desafios para uma economia verde. O ISEE é uma organização sem fins lucrativos dedicado à compreensão das relações entre economia, ecologia e sociedade, para o bem-estar das pessoas e da natureza.		
Aldeia Global: É tudo nosso!	16/06/2012			A proposta consiste em uma exposição multimídia (vídeos, fotografia e áudios) intitulada "Aldeia Global: É tudo nosso!", que transmitirá ao público conteúdo relativo aos pilares da Rio+20. O material audiovisual será produzindo pelos alunos e membros do Grupo Pensar, que vem apostando em uma transformação social dentro da comunidade. A exposição servirá também como espaço de reconhecimento e memória, uma vez que as imagens projetadas dialogam diretamente com o território e seus moradores. A intenção então é chamar a atentação para a importância de cada indivíduo na construção de um coletivo mais justo e respeitado. A exposição vai buscar mostrar que atitudes individuais aparentemente insignificantes de um único indivíduo (como jogar lixo em local inapropriado) podem resultar em uma cadeia de acontecimentos prejudiciais em grande escala. Certification as a tool for greening economies	16/06/2012	11:00:00	Arena da Barra	The sustainable use of natural resources is a fundamental precondition for a green economy. FSC was set up by environmental and social organisations together with forest owners (private and community) and companies to develop a transparent and credible scheme for sustainable forest management. FSC has triggered substantial demand for sustainably harvested wood products: already 5% of the world's total forests are managed according to FSC standards. Forest products play a key role in a green economy. For instance they provide construction material for zero-energy buildings and replace other resources for products and energy for environmental and scarcity reasons. It is essential to mobilise these products in complete harmony with globally agreed objectives to halt the deterioration of biodiversity, as well improving social justice and respect for people directly dependant on forests. Come and discuss the promotion of forest certification, in particular in tropical areas, and how governments and public authorities can help mainstream the use of certified forest products.	Forest Stewardship Council	

Certificação como uma ferramenta para as economias verdes	16/06/2012	11:00:00	Arena da Barra	O uso sustentável dos recursos naturais é uma pré-condição fundamental para uma economia verde. FSC foi criado por organizações ambientais e sociais em conjunto com empresas e proprietários florestais (privados e comunitários) para desenvolver um sistema transparente e confiável para a gestão florestal sustentável. FSC tem provocado uma demanda substancial de produtos de madeira produzidos de forma sustentável: Atualmente 5% do total de florestas do mundo já são geridos de acordo com os padrões do FSC. Os produtos florestais desempenham um papel fundamental em uma economia verde. Por exemplo, eles fornecem material de construção para edifícios de energia zero e substituem outros materiais para a geração de produtos e energia, por razões ambientais e de escassez de recursos. É essencial mobilizar esses produtos em completa harmonia com os objetivos globalmente acordados para conter a deterioração da biodiversidade, bem como melhorar a justiça social e o respeito pelas pessoas diretamente dependentes das florestas. Venha discutir a promoção da certificação florestal, em particular em áreas tropicais, e como os governos e as autoridades públicas podem ajudar a regular o uso de produtos florestais certificados.	Forest Stewardship Council	
PACTO DE RESGATE AMBIENTAL LOCAL ¨Ampliando perspectivas para uma cultura sustentável¨	16/06/2012	11:00:00	Arena da Barra	Este seminário é fruto do Movimento Evolutivo PACTO DE RESGATE AMBIENTAL LOCAL, uma estratégica e reconhecida iniciativa que há doze anos vem unindo governo, empresariado, ongs, entidades e comunidades no cuidado ambiental local, que nos conduz para um território mais sustentável.	Instituto Cultural e Ecológico Lagoa Viva	
LOCAL ENVIRONMENTAL COVENANT OF REDEMPTION ¨Broadening perspectives for a sustainable culture¨	16/06/2012	11:00:00	Arena da Barra	It is necessary that everyone understands that the impacts provided by new technologies raise a number of urgent changes and require more participative involvement of communities. We can not continue to damage the support systems of life on Earth, our home our only shelter, which has been showing us an unequal world and that many of our habits, ways of being and doing are unsustainable. By spreading knowledge in addressing relevant issues of today such as, cutting CO2 emissions, green economy, valuation of ecosystem services, climate change, water resources, reverse logistics, sustainable construction, leads us to believe that we are on a path that allows environmental successful turnaround. Seminars like this provide an opportunity for convergence of values and eco-innovations in the search for new indicators that can assess the real wealth for the welfare of living beings. Emphasising the interrelatedness of the themes with a view to seeking new players who will be substantiated by inserting these debates and practices .. This seminar is the result of the Movement Evolutionary PACT LOCAL ENVIRONMENTAL RESCUE, a strategic initiative and recognized that there are twelve years is uniting	Instituto Cultural e Ecológico Lagoa Viva	
Educação Científica Inovadora no contexto da Economia Verde	16/06/2012	11:00:00	Arena da Barra	O uso de abordagens diferenciadas para a educação científica e o seu potencial para preparar os jovens para a economia verde. Nesse contexto destaca-se o uso das tecnologias da informação, jogos e o desenvolvimento de competências empreendedoras. Na ocasião, o programa “QUED na Rádio” (Ipanema FM 94.9 – Porto Alegre - RS) será gravado.	MGN Consultoria LTDA	
Innovative Scientific Education in a Green Economy context	16/06/2012	11:00:00	Arena da Barra	The use of innovative approaches in scientific education and its potential to prepare young students for the green economy. In this context the use of information technology, games and entrepreneurial competences is highlighted.	MGN Consultoria LTDA	
PLANO DE RECUPERAÇÃO DE ÁREAS DEGRADADAS PELA MINERAÇÃO NO LITORAL NORTE DO ESTADO DE SÃO PAULO: PERSPECTIVAS DE ENQUADRAMENTO EM PROJETO DE MECANISMO DE DESENVOLVIMENTO LIMPO (MDL)	16/06/2012	13:00:00	Arena da Barra	As áreas degradadas pela mineração de saibro no Litoral Norte do Estado de São Paulo caracterizam-se por sítios onde ocorre uma grande perda de solo quando comparada com a perda de solo dos demais usos da terra. Considerando-se o potencial de armazenamento de carbono no solo acredita-se que uma recuperação das áreas degradadas que estanque essa perda de solo causará uma redução quantificável de emissão de carbono causada pela desagregação do solo por processos erosivos. Por outro lado, se a recuperação for feita por meio de revegetação da área, haverá concomitantemente um aumento considerável na remoção de carbono da atmosfera. Dessa forma a recuperação das áreas degradadas pode ser enquadrada na situação de redução do efeito estufa.	INSTITUTO CARAGUATÁ	
Projeto Nacional de Desenvolvimento com Valorização do Trabalho e Sustentabilidade Ambiental	16/06/2012	15:00:00	Arena da Barra	O tema elencado apresentará a visão dos trabalhadores classistas na construção do projeto nacional que foca a valorização do trabalho e a sustentabilidade ambiental como fundamental para o desenvolvimento	CTB - Central dos Trabalhadores e Trabalhadoras do Brasil	

Tornando sonhos realidade: Como construir um projeto extremamente bem sucedido. O caminho do Dragon Dreaming	16/06/2012	15:00:00	Arena da Barra	O objetivo da atividade é reunir representantes de organizações que desenvolvem projetos em sustentabilidade. Através de seu principal criador e facilitador, os participantes terão acesso ao Dragon Dreaming, uma abordagem baseada em sistemas vivos, baseando-se em ideias e inspirações da história, ciências, todas as culturas e tradições espirituais, visando a criação de organizações e projetos extraordinariamente bem sucedidos para a Grande Virada do mundo, saindo de uma cultura doente e sem limites de crescimento para uma cultura que sustente o desenvolvimento da vida na Terra. Community based climate resilient forests: Pathways to green economy,	17/06/2012	9:30:00	T-9 (Riocentro)	Nepal is leading the community based forest management and witnessing substantial post-conflict political, institutional, economic and social transformations. The forestry sector is also facing a number of unfolding challenges and opportunities, resulting from changes within and outside the sector. At this juncture of Rio+ 20, the forestry sector of Nepal will be organizing a side event as the UNCSD provides opportunity a forum for a debate on global opportunities and set priority action. The objectives: ? Articulate the linkages among community based forests, climate change, livelihood and the multiple facets of the green economy ? Discuss on how forests and green economy are mutually dependent; and focus on how community based forests play key roles Four speakers will provide presentation on the following three topics: (a) nexuses between green economy and Forest - livelihood and climate change; (b) sustainable forest management and biodiversity conservation; and (c) the way to and from Rio for the forestry stakeholder	Nepal	
Without Water There Is No Life - Educational Component	17/06/2012	9:30:00	T-4 (Riocentro)	Education is key to stimulating an appreciation for and consideration of the earth and its invaluable resources, including water. For many rural communities in developing countries, daily life and its challenges force a more immediate response to those challenges without concern for the environment. Our goal is to develop educational tools that promote and encourage sustainability, yet also empower rural communities economically, socially, and politically. We want to facilitate the ability to see a better future, by a foundation through means of education in order to develop strategies for furthering this goal through this process. Panelists from the organizing partners will share their experiences by promoting ¡§hands-on¡¨ action in planting seeds for a sustainable future of love and peace.	The International Health Awareness Network (IHAN)	
Ethical Implications of Sustainability: Educational and Religious Pers	17/06/2012	9:30:00	T-5 (Riocentro)	Discussions on sustainability are shifting from political, economic, and scientific discourses to social, cultural, and spiritual considerations. This shift is due to fundamental ethical questions that emerged at the intersection between religion and education, but are often disregarded in global discussions. This event will address this issue by exploring the following questions: ? What are the ethical implications of sustainability? ? How do religious and educational institutions address these challenges? ? What is the impact of religious and educational institutions on the global agenda for sustainability? ? How can religious and educational practices contribute to a ?green society?? By discussing how religion and educational groups promote ethical values and contribute to environmental action and sustainable practices, this event will shed light on a key strategic issue for Rio+20 UN Conference: the need to have innovative values and norms that translate the goals of sustainability to constituencies in global civil society.	Baptist World Alliance	
Rights of Nature - the Foundation for Sustainability	17/06/2012	9:30:00	T-3 (Riocentro)	Rights of Nature ? the Foundation for Sustainability An international panel of Rights of Nature experts will illustrate the vital role of a new legal framework recognizing rights of nature as the foundation for sustainable development. The panel will examine why a new framework for governance is necessary and is part of a bigger shift required in society today ─ a shift that will require that modern laws and policies comply with the laws of the Earth, and a way of living which maintains the health and integrity of the whole Earth Community. Panel: ? Nnimmo Bassey ? Environmental Rights Action / Friends of the Earth, Nigeria ? Cormac Cullinan ? EnAct International, South Africa ? Tom Goldtooth ? Indigenous Environmental Network, USA ? Natalia Greene ? Fundación Pachamama, Ecuador ? Linda Sheehan ? Earth Law Center, USA ? Pablo Solon ? Former Ambassador to the UN, Bolivia Moderator: Shannon Biggs, Global Exchange, USA	Global Exchange	

Sustainability Standards: Catalysing the Green Economy	17/06/2012	9:30:00	T-8 (Riocentro)	Standards, Certification and Labelling Schemes: Catalysing the Green Economy Evidence from the forestry, agricultural and mining sectors The objective of the event convened by ISEAL and SECO is to present and discuss how the use of sustainability standards in the forestry, agricultural and mining sectors has demonstrated that standards and certification are effective drivers of sustainable development and their further uptake should be encouraged and supported. The event will advocate for: ? The inclusion of credible standards, certification and labels in the tool- box of good practices capable of supporting the green economy and sustainable development; ? Government support for the scaling-up of credible sustainability standards. The event will be concluded with a short press conference in which a number of key government, business and civil society leaders will announce new and important commitments with respect to the scaling up of sustainability standards - these are specific commitments with respect to encouraging and supporting the further uptake of sustainability standards.	ISEAL Alliance

Scaling-Up Agro-Ecological Food Production	17/06/2012	11:00:00	UN2 (Barra Arena)	The Ecumenical Advocacy Alliance (EAA) is the most inclusive international advocacy network of churches and Christian organizations with members and constituents in the tens of millions. Under EAA?s Food for Life Campaign, and in collaboration with UN and civil society partners, we promote just and sustainable production and consumption of food, and the right to food for all people. We advocate for food production, trade and distribution systems that are just, participatory and democratic while at the same time environmentally, economically and socially sustainable. ?Scaling-Up Agro-Ecological Food Production? will profile sustainable, smallholder-based, agro-ecological methods of food production. EAA will showcase research and case studies demonstrating the positive impacts of such methods in terms of both yield and environmental sustainability. Our aim is to stimulate discussion on the economic and environmental practicality of feeding the world through scaled-up implementation of agro-ecological food production methods. Challenges for the Roma women in Europe	17/06/2012	11:30:00	P3-2 (Riocentro)	Women belonging to the Roma minority face multiple discrimination, particularly in the field of education, health, employment or participation in public and political life. There is a strong concern regarding the lack of efficient solutions addressing the situation of Roma women and children, especially in order to reduce the poverty level. Roma women are characterised by very early marriages, birth of the first child in juvenile age and following births with short intervals in-between. Premature births are risk factors for severe congenital disorders, high child mortality in the first year of life and high mother mortality.	Romani CRISS ? Roma Centre for Social Intervention and Studies	

TOWARDS GREEN ECONOMY: PERSPECTIVES, BENEFITS, CONCERNS - RUSSIAN P	17/06/2012	11:30:00	T-3 (Riocentro)	Russia plays an important role in maintaining stability of the planet. It is the largest country (12% of the total land area) and the world's largest undisturbed by economic activity area (60-65% of the country). Russia holds the largest share of the world forests (22%), 13% of oil, 34% of gas, 12% of coal, 27% of iron ore. These resources are a storehouse for the development of the global economy. However, large-scale of its extraction would inevitably have a negative impact on the planet ecological balance. In Russia there are unique ecosystems that preserve rare species of flora and fauna, which are the planetary domain. The Russian economy is the fourth largest in the world in terms of greenhouse gas emissions. Besides the role of Russia in the global economy and politics is growing. All these factors determine the important role Russia can play in the transition to sustainable development globally	Eco-Accord	
WWF: Sustainable And Affordable Access To Energy-From Field To Policy	17/06/2012	11:30:00	T-10 (Riocentro)	Access to economically viable and sustainable energy is fundamental for the economic, social and political development of a country. It brings improvements in healthcare, education, communication and several other areas of basic needs. Today it is estimated that 1.4 billion people live without access to reliable electricity and 2.7 billion without access to clean cooking facilities. This has several environmental and human health consequences. The WWF ¡¥Clean, Reliable and Affordable Energy Access¡¦ side event will address these problems showing success stories from the field, and demonstration projects that depict energy access models complemented by presentations from governments thus creating a link between field work and national policy. In showing the way from pilots to policy, stakeholders in different countries will come on as partners and add their perspectives of policy, governance, technology and entrepreneurship in the given context of energy access in the three selected countries India, Uganda and Madagascar.	World Wide Fund for Nature European Office	
Sustainability, Value Based Leadership and African Youths	17/06/2012	11:30:00	T-8 (Riocentro)	Leadership in Africa have globally been identified as one of the major crisis in Africa starting from selection, election processes And sustainability of the elected position And responsibilities. This derails major national, regional AND GLOBALL DEVELOPMENTS IN Africa. African Children Talent Discovery Foundation and World Mission Foundation an NGO in Special Consultative Status wit ECOSOC at the United Nations in taking steps to further their collaborative mission considers its significant need to bring the issues to Rio+20. The underlying purpose is to seek for diverse value based leadership skills that could be provided to youths of Africa in understanding the import of sustainable leadership for global, regional and national development of Africa.	World Mission Foundation	
Banking as if the future matters - Making the change from short term profit to long term prosperity	17/06/2012	11:30:00	P3-6 (Riocentro)	The Global Alliance for Banking on Values, the Green Economy Coalition and The Norwegian Forum for Environment and Development will co-host a debate to determine key policy changes that governments can make to help shift finance from a short term focus to long term sustainable value creation. Over the months up to Rio+20 an online consultation has taken place to identify enabling policies to promote a long term approach. The results will be launched at this event. Find out how banking and finance, in cooperation with governments and civil society, can create a profound shift towards a greener, more inclusive and fairer economy.	Norwegian Forum for Development and Environment	
Sustainable development of indigenous people of the North and the Arct	17/06/2012	11:30:00	P3-4 (Riocentro)	The Program of the roundtable meeting ?A Long-term Sustainable Development for Global Sustainable Development Based on Partnership of Civilizations and Prospects of Indigenous People of the North? within the UN Conference on Sustainable Development RIO+20 Prospects of sustainable development of indigenous people of the North and the Arctic civilization	Pitirim Sorokin and Nikolai Kondratieff International Institute	

Towards Universal Access to Sustainable Energy Service in West Africa	17/06/2012	11:30:00	T-5 (Riocentro)	To accelerate the achievement of the Millennium Development Goals (MDGs) the Economic Community for West African States (ECOWAS) adopted the ECOWAS/UEMOA Regional White Paper on Access to Energy Services for Populations in Rural and Peri-urban Areas in 2006. The white paper aims at providing access to improved domestic cooking fuels and sustainable electricity services for the majority of the population by 2015. After five years of implementation, the ECOWAS Regional Centre for Renewable Energy and Energy Efficiency (ECREEE) in cooperation with its partners are organizing a side event at the Rio+20. At the background of the newly adopted UN Goals on Universal Access to Energy Services by 2030 the workshop will take stock of the achievements and will highlight success stories in some of the countries. Moreover, the side event will discuss the possible contribution of renewable energy and energy efficiency solutions to accelerate the implementation the White Paper.	ECOWAS Regional Centre for RenewableEnergy and Energy Efficiency (ECREEE)	
Interfaith response to Sustainable Development:Ecological Civilization	17/06/2012	11:30:00	T-2 (Riocentro)	What does religion have to do with Rio+20? The Interfaith Consortium for Ecological Civilization works towards the transformation of consciousness needed to enable changes towards sustainability. Religions help people shape their worldviews and act on their values. Governments need the guidance of an awakened civil society to make necessary radical changes. Corporations need an awakened civil society to insist on internalizing costs and serving society. Inspired by the work of Thomas Berry and by resources from the world's religions, this session will explore the spiritual resources for transformation and current manifestations of such transformations. We will then consider what is needed to ramp up this change in service to the Earth. Areas of application include communities, corporate engagement, the Convention on Corporate Social Responsibility, and support of youth leadership. The change in consciousness and the new actions that flow from it offer a positive direction towards renewed flourishing on Earth.	Temple of Understanding	
The Other Half of Development: Patterns of Sustainable Consumption	17/06/2012	11:30:00	T-4 (Riocentro)	In discussing sustainable development, many focus on the production aspect of development. Much of the dialogue centers on improving the efficiency of current production methods, i.e. providing more food for more people given a limited amount of resources. While sustainable and efficient production is important, it is only half of the equation. The workshop will instead focus on patterns of sustainable consumption. The major stakeholders must be invested in inspiring the world?s population to reduce their desire for consumption as a crucial part of sustainable development. The thematic focus of this workshop is on in-depth discussion of sustainable individual consumption, including reduction of consumption habits, promotion of vegetarianism, and the benefits of recycling. The workshop will also cover efficient cooking methods and sustainable practices in food security and agriculture.	Buddhist Tzu Chi Foundation	
Constructive Cooperation	17/06/2012	11:30:00	T-9 (Riocentro)	Global issues like sustainable development are a down-top process that involves grassroots and how civil society will mobilize populations to support the work of the United Nations. By supporting this process, the Legion of Good Will (LGW), the only Brazilian NGO in general consultative status with ECOSOC, has substantially contributed towards the achievement of the sustainable development goals, especially in Latin America. The proposed side event intends to be a showcase of success stories gathered during the 9th Solidary Society Network Multi-stakeholder Forum, held last March by the LGW in partnership with the NGO Branch of the United Nations Department of Economic and Social Affairs and other UN agencies in Argentina, Bolivia, Brazil, Paraguay and Uruguay. The mechanisms to strengthen constructive cooperation among international organisms, NGOs, local authorities and academia are the focus of this dialogue towards concrete proposals to eradicate poverty in the context of a green economy.	Legion of Good Will	
An ethical framework for global governance	17/06/2012	11:30:00	T-6 (Riocentro)	For more than 30 years, the international community, through different international declarations (e.g the Rio Declaration, the Johannesburg Declaration, the Earth Charter), have been trying to find shared ethical principles that can help humanity to make decisions in our current situation. These principles will be foundational for the governance system for sustainability that will be discussed during the Rio+20 Summit. This side event will offer the opportunity for an open discussion about the importance of agreeing on common ethical principles for a global governance system for sustainability. A panel involved in conversations about an ethical framework for global governance will share a wide range of opinions on this topic. Participants in this side event will have the opportunity to interact with the panelists and among themselves.	Earth Charter International	

Subnational Governments. Building a Sustainable Development Strategy	17/06/2012	11:30:00	P3-A (Riocentro)	The Buenos Aires province is developing public policies on sustainable development based on the subnational level as a member of the Network of Regional Governements for Sustainable Development. The social, economic and environmental dimensions sublie the design of any measure applied, allowing the synergy between programs. The aim of the side event proposed is to contribute to the strengthening of a national strategy on sustainable development from the perspective of a local (subnational) government. In addition, to increase the social awareness, showing the potentiality of the coordinated actions from local and regional governments through the exchange of experiences and capabilities between institutions and decision makers. The outcomes and inputs relative to the Rio+20 goals are: To strength the mechanisms of cooperation between local and regional governments. To contribute to the inclusion of the local aspects on sustainable development in national and international strategies, from a interjurisdictional, interinstitutional and interdisciplinary approach.	Subnational Government of Buenos Aires	
Challenges for the Roma women in Europe	17/06/2012	11:30:00	P3-2 (Riocentro)	Women belonging to the Roma minority face multiple discrimination, particularly in the field of education, health, employment or participation in public and political life. There is a strong concern regarding the lack of efficient solutions addressing the situation of Roma women and children, especially in order to reduce the poverty level. Roma women are characterised by very early marriages, birth of the first child in juvenile age and following births with short intervals in-between. Premature births are risk factors for severe congenital disorders, high child mortality in the first year of life and high mother mortality.	Romani CRISS ? Roma Centre for Social Intervention and Studies	
TOWARDS GREEN ECONOMY: PERSPECTIVES, BENEFITS, CONCERNS - RUSSIAN P	17/06/2012	11:30:00	T-3 (Riocentro)	Russia plays an important role in maintaining stability of the planet. It is the largest country (12% of the total land area) and the world's largest undisturbed by economic activity area (60-65% of the country). Russia holds the largest share of the world forests (22%), 13% of oil, 34% of gas, 12% of coal, 27% of iron ore. These resources are a storehouse for the development of the global economy. However, large-scale of its extraction would inevitably have a negative impact on the planet ecological balance. In Russia there are unique ecosystems that preserve rare species of flora and fauna, which are the planetary domain. The Russian economy is the fourth largest in the world in terms of greenhouse gas emissions. Besides the role of Russia in the global economy and politics is growing. All these factors determine the important role Russia can play in the transition to sustainable development globally.	Eco-Accord	
WWF: Sustainable And Affordable Access To Energy-From Field To Policy	17/06/2012	11:30:00	T-10 (Riocentro)	Access to economically viable and sustainable energy is fundamental for the economic, social and political development of a country. It brings improvements in healthcare, education, communication and several other areas of basic needs. Today it is estimated that 1.4 billion people live without access to reliable electricity and 2.7 billion without access to clean cooking facilities. This has several environmental and human health consequences. The WWF ¡¥Clean, Reliable and Affordable Energy Access¡¦ side event will address these problems showing success stories from the field, and demonstration projects that depict energy access models complemented by presentations from governments thus creating a link between field work and national policy. In showing the way from pilots to policy, stakeholders in different countries will come on as partners and add their perspectives of policy, governance, technology and entrepreneurship in the given context of energy access in the three selected countries India, Uganda and Madagascar.	World Wide Fund for Nature European Office	
Sustainability, Value Based Leadership and African Youths	17/06/2012	11:30:00	T-8 (Riocentro)	Leadership in Africa have globally been identified as one of the major crisis in Africa starting from selection, election processes And sustainability of the elected position And responsibilities. This derails major national, regional AND GLOBALL DEVELOPMENTS IN Africa. African Children Talent Discovery Foundation and World Mission Foundation an NGO in Special Consultative Status wit ECOSOC at the United Nations in taking steps to further their collaborative mission considers its significant need to bring the issues to Rio+20. The underlying purpose is to seek for diverse value based leadership skills that could be provided to youths of Africa in understanding the import of sustainable leadership for global, regional and national development of Africa. Pré-estreia do documentário “Amazônia Desconhecida”	17/06/2012	14:00:00	Parque dos Atletas	A Amazônia é um dos lugares mais famosos do mundo e, curiosamente, um dos menos conhecidos. Em meio a tanta desinformação, o documentário se propõe uma difícil missão. Buscar as inúmeras verdades existentes, derrubando mitos e levando ao público um retrato mais fiel da maior floresta tropical do planeta. Quais são os vilões do desmatamento? Qual o caminho para o desenvolvimento sem agredir a natureza? Estas são algumas das questões cruciais envolvendo a Amazônia e que ainda esperam por respostas convincentes. Trata-se de um filme sobre a Amazonia, feito por brasileiros, mas com uma visão global do tema, e apoiado nas mais recentes descobertas e pesquisas cientificas. Um filme que abriga visões conflitantes, e que abre espaço para que muitas vozes possam ser ouvidas. Evento aberto ao público. Sustaining the Gains of Philippine Agenda 21	17/06/2012	13:00:00 AM	P3-2 (Riocentro)	The Philippines is one of the forerunners of sustainable development in Asia. Several months after the 1992 Rio Earth Summit, the Philippine Government initiated the formulation of the ?Philippine Agenda 21? (PA 21), which served as the country?s blueprint towards sustainable development. As the PA 21 marks its 15th year this 2012, the side-event aims to showcase the gains achieved and lessons learned by the Philippines on sustainable development thus far. Looking towards the future, the Philippines consider green economy as the new rallying point for the better integration of the three pillars of sustainable development. Likewise, it recognizes the need to encourage sustainable consumption and production patterns as a tool and mechanism to achieve sustainable development. The side-event shall also serve as a venue to share results of the partnership of UNEP and the Philippine Government on SCP and GE.	Philippines

Partenariat sur la Contribution des Organisations au DD	17/06/2012	13:30:00 AM	P3-B (Riocentro)	L?Organisation internationale de la Francophonie (OIF), a contribué de façon substantielle aux négociations et à l?adoption de la Norme ISO 26000 portant Lignes directrices du Développement durable publiée en novembre 2010. Pour le déploiement de cette norme, l?OIF a élaboré et adopté une stratégie propre en vue du développement d?un partenariat du type de 2 des Nations Unies. C?est ainsi que lors du Forum francophone préparatoire à Rio+20, un atelier s?est tenu le 7 février 2012 à Lyon, en France, qui a permis de faire un état des lieux détaillé des initiatives et des développements en cours au plan international en matière de responsabilité sociétale comme contribution des organisations au développement durable, illustrés par des exemples de déploiement dans des pays francophones. Ceci a abouti à l?adoption du Projet de Partenariat objet de l?évènement parallèle envisagé à Rio.	Institut de l'Énergie et de l'Environnement de la Francophonie	

China Going Green? A Civil Society Review of 20 years of Sustainable Development	17/06/2012	13:30:00 AM	T-9 (Riocentro)	The worsening pollution and intensifying ecological degradation in recent years has made it clear that China cannot continue to go about business as usual. Traditional development models are now under scrutiny. Chinese NGOs have joined together in critically reviewing the practices and challenges of sustainable development over the past two decades (1992-2011). Their collective effort has cumulated in a joint report, China Going Green? A Civil Society Review of 20 years of Sustainable Development. Covering a wide range of issues, from water pollution to climate change to green finance, the report will be launched at this side event. Lead authors from different NGOs will share their unique writing processes, which involved a multiplicity of stakeholders and their diverse views. This side event, as part of the ?China Going Green? Dialogues, is a rare opportunity to learn from seldom-heard independent voices within Chinese civil societies on the challenges and opportunities of the world?s fastest growing economy.	SEE Foundation	
Agricultural transition - into a viable food future	17/06/2012	13:30:00 AM	T-4 (Riocentro)	There is an urgent need to transform unsustainable agriculture and food systems. Industrial agriculture and other forms of unsustainable practices have caused dramatic problems. But resilient and sustainable modes of food production exist, and small scale food producers nourish more than 70% of the global population. How can we make the transition into agricultural production and food systems which can - drastically reduce poverty, - reduce climate change and cool the planet, - restore biodiversity, soil fertility and water resources, - improve livelihoods and provide employment for billions of people, - produce enough, good and nutritious food for 9 billion people or more? Examples of sustainable food systems and lessons learned from transition into such systems will be presented. Leader of farmers? organizations and international institutions will together with scientists and activists discuss how a transition into a viable food future can happen.	More and Better Network	
African Young Scientist Initiative on Climate Change and IKS	17/06/2012	13:30:00 AM	P3-4 (Riocentro)	The African Young Scientists Initiative on Climate Change and Indigenous Knowledge Systems (AYSICCIKS) seeks to participate in Rio+20 United Nations Conference on Sustainable Development, in Rio de Janeiro, Brazil, June 2012. The Initiative will organize a round table discussion and mini-exhibition to promote and showcase examples of African best practices on: the Role of African Young Scientists in Promoting Indigenous Knowledge Systems (IKS) for Sustainable Livelihoods within the context of climate change. The focus will be on the role of IKS in food security, natural resource management and health. The objectives are to share experiences with the international community on the outcome of AYSICCIKS?s participation and deliberations at COP 17 in Durban (2011); and to enable African young scientists to build international networks on IKS, Climate Change and sustainable development	South Africa	
The Role of Climate Induced Displacement in Socio-economic Development	17/06/2012	13:30:00 AM	T-8 (Riocentro)	Middle East is one of the most climate sensitive regions. According to latest IPCC assessment, the climate is predicted to become even hotter and drier in most of the MENA region. It is further estimated that an additional 80?100 million people will be exposed by 2025 to water stress that is likely to result in an even stronger pressure on groundwater resources. In addition,they are expected to fluctuate more widely, ultimately falling to a significantly lower long-term average. Global models predict sea levels rising from about 0.1 to 0.3 meters by the year 2050, and from about 0.1 to 0.9 meters by 2100. In the case of extreme scenarios (0.5), 12 millions are expected to be displaced in Egypt alone. It will be critical for the governments plan to answer and prioritize these new threats from more multi dimensional scenarios in order to keep social and political stability	Arab Network for Environment and Development (RAED)	
Climate Change and SD in Ethiopia : Role of Civil Society	17/06/2012	13:30:00 AM	T-10 (Riocentro)	Ethiopia is one of the countries which are severely affected by the impacts of climate change which is hindering the country?s efforts to eradicate poverty and develop sustainably. The country is currently undertaking several efforts to wade of the problems including the initiation of the Climate Resilient Green Economy (CRGE) strategy. Civil society in Ethiopia in recent past have been addressing the issue of climate change to a greater extent, thereby also supporting the initiatives of the government. Apart from individual organizations, civil society coalitions have been formed (eg ECSNCC, HoA-REN, PHE Consortia etc.) to address the issues pertaining to climate change. The side event will address the role and contribution of civil society in addressing climate change impacts. The panel will also bring out specific case studies and future opportunities for CSOs in Ethiopia.	Environmental Governance and Education, Horn of Africa - Regional Environment Centre/Network, Addis Ababa University	

From Production To Consumption - Towards A Sustainable Food System	17/06/2012	13:30:00 AM	T-2 (Riocentro)	Participants will enjoy the first parts of the documentary “No Fight No Victory”, presented by award-winning Director Jan van den Berg. One billion people in the world face hunger. In Brazil’s third city, Belo Horizonte, the right to food is now guaranteed by law. Its policy inspired many people in the world, but each country needs to find its own strategy. Together with journalist Sara Abreu Mata Machado, the film takes us around the world to see the hopeful developments eradicating hunger through the eyes of the people Sara meets. It becomes very clear: to arrive at a truly sustainable agriculture and food system, we need to transform the food value chains – from production to consumption.	Millennium Institute	
nnovative Collaborations Driving Inclusive Sustainable Growth	17/06/2012	13:30:00 AM	P3-A (Riocentro)	Full Title: Innovative collaborations enabling women to develop scalable green economy businesses to accelerate sustainable development (Learnings from Brazil, Guatemala, India, Kenya, New Zealand and Turkey) The purpose of this side event is to share learnings from creative collaborations among businesses, NGOs and governments that help women access clean water and renewable energy sources to improve their family?s health and livelihoods and empower them to be part of green supply chain.	BPW International	
Get mad and do something about it! Youth as initiators for change	17/06/2012	13:30:00 AM	T-6 (Riocentro)	The title of this panel ?Get mad and do something about it? is not meant to inspire militant direct action. Instead, this panel is meant to recognize the anger many young people feel when we look to our future but it will also show that youth are determined to create a positive future and seeks to inspire them to do something about it.	Peace Child International	
Indigenous and Local Communities and the Private Sector	17/06/2012	13:30:00 AM	T-5 (Riocentro)	The Rio +20 summit focuses on two topics: on the one hand a green economy in the context of sustainable development and poverty eradication and on the other hand the institutional framework for sustainable development. The side event aims to illustrate how biodiversity use can serve these two strategic objectives. In 2009, the Natural Resources Stewardship Circle of the aromatic, perfume and cosmetics industry (NRSC) committed to developing collaborative guidelines for ethical and sustainable sourcing of natural extracts from the traditional territories of indigenous peoples and local communities (ILCs) producers around the world. Currently, NRSC membership is made up of 20+ major international companies. In this event, the NRSC, in cooperation with the Secretariat of the Convention on Biological Diversity, Associacao Sociocultural Yawanawa, and Tribal Link Foundation will share experiences from the field and engage the audience in an open dialogue on the development of guidelines and the next steps forward.	Tribal Link Foundation	
Sustainable Development: Do we need a green industrial policy?	17/06/2012	13:30:00 AM	T-3 (Riocentro)	Industrial policy has made a forceful comeback. The global economic and financial crisis demanded swift action by governments to support and restructure productive activities, and industry in particular, in order to protect employment. At the same time global challenges such as climate change cannot be addressed without decisive policy changes in industry-related incentives and regulations. The conditions are ripe for placing industrial policy at the core of the policy agenda for green growth and sustainable development. Industry produces large amounts of emissions and pollution while being a major source of employment and wages. Rio + 20 thus become a unique forum for suggesting global and national industrial policies that are green, inclusive and economically dynamic. The side-event will bring together the business sector, governments, academia and representatives of civil society. It will aim at discussing the fundamental sustainability choices and proposing guiding principles and best practices for industrial policy.	United Nations Industrial Development Organization (UNIDO)	
Partenariat sur la Contribution des Organisations au DD	17/06/2012	13:30:00 AM	P3-B (Riocentro)	L?Organisation internationale de la Francophonie (OIF), a contribué de façon substantielle aux négociations et à l?adoption de la Norme ISO 26000 portant Lignes directrices du Développement durable publiée en novembre 2010. Examples of sustainable food systems and lessons learned from transition into such systems will be presented. Leader of farmers? organizations and international institutions will together with scientists and activists discuss how a transition into a viable food future can happen.	More and Better Network	
African Young Scientist Initiative on Climate Change and IKS	17/06/2012	13:30:00 AM	P3-4 (Riocentro)	The African Young Scientists Initiative on Climate Change and Indigenous Knowledge Systems (AYSICCIKS) seeks to participate in Rio+20 United Nations Conference on Sustainable Development, in Rio de Janeiro, Brazil, June 2012. The Initiative will organize a round table discussion and mini-exhibition to promote and showcase examples of African best practices on: the Role of African Young Scientists in Promoting Indigenous Knowledge Systems (IKS) for Sustainable Livelihoods within the context of climate change. The focus will be on the role of IKS in food security, natural resource management and health. The objectives are to share experiences with the international community on the outcome of AYSICCIKS?s participation and deliberations at COP 17 in Durban (2011); and to enable African young scientists to build international networks on IKS, Climate Change and sustainable development	South Africa	
The Role of Climate Induced Displacement in Socio-economic Development	17/06/2012	13:30:00 AM	T-8 (Riocentro)	Middle East is one of the most climate sensitive regions. According to latest IPCC assessment, the climate is predicted to become even hotter and drier in most of the MENA region. It is further estimated that an additional 80?100 million people will be exposed by 2025 to water stress that is likely to result in an even stronger pressure on groundwater resources. In addition,they are expected to fluctuate more widely, ultimately falling to a significantly lower long-term average. Global models predict sea levels rising from about 0.1 to 0.3 meters by the year 2050, and from about 0.1 to 0.9 meters by 2100. In the case of extreme scenarios (0.5), 12 millions are expected to be displaced in Egypt alone. It will be critical for the governments plan to answer and prioritize these new threats from more multi dimensional scenarios in order to keep social and political stability	Arab Network for Environment and Development (RAED)	
Climate Change and SD in Ethiopia : Role of Civil Society	17/06/2012	13:30:00 AM	T-10 (Riocentro)	Ethiopia is one of the countries which are severely affected by the impacts of climate change which is hindering the country?s efforts to eradicate poverty and develop sustainably. The country is currently undertaking several efforts to wade of the problems including the initiation of the Climate Resilient Green Economy (CRGE) strategy. Civil society in Ethiopia in recent past have been addressing the issue of climate change to a greater extent, thereby also supporting the initiatives of the government. Apart from individual organizations, civil society coalitions have been formed (eg ECSNCC, HoA-REN, PHE Consortia etc.) to address the issues pertaining to climate change. The side event will address the role and contribution of civil society in addressing climate change impacts. The panel will also bring out specific case studies and future opportunities for CSOs in Ethiopia.	Environmental Governance and Education, Horn of Africa - Regional Environment Centre/Network, Addis Ababa University	

From Production To Consumption - Towards A Sustainable Food System	17/06/2012	13:30:00 AM	T-2 (Riocentro)	Participants will enjoy the first parts of the documentary “No Fight No Victory”, presented by award-winning Director Jan van den Berg. One billion people in the world face hunger. In Brazil’s third city, Belo Horizonte, the right to food is now guaranteed by law. Its policy inspired many people in the world, but each country needs to find its own strategy. Together with journalist Sara Abreu Mata Machado, the film takes us around the world to see the hopeful developments eradicating hunger through the eyes of the people Sara meets. It becomes very clear: to arrive at a truly sustainable agriculture and food system, we need to transform the food value chains – from production to consumption.	Millennium Institute	
nnovative Collaborations Driving Inclusive Sustainable Growth	17/06/2012	13:30:00 AM	P3-A (Riocentro)	Full Title: Innovative collaborations enabling women to develop scalable green economy businesses to accelerate sustainable development (Learnings from Brazil, Guatemala, India, Kenya, New Zealand and Turkey) The purpose of this side event is to share learnings from creative collaborations among businesses, NGOs and governments that help women access clean water and renewable energy sources to improve their family?s health and livelihoods and empower them to be part of green supply chain.	BPW International	
Get mad and do something about it! Youth as initiators for change	17/06/2012	13:30:00 AM	T-6 (Riocentro)	The title of this panel ?Get mad and do something about it? is not meant to inspire militant direct action. Instead, this panel is meant to recognize the anger many young people feel when we look to our future but it will also show that youth are determined to create a positive future and seeks to inspire them to do something about it.	Peace Child International	
Indigenous and Local Communities and the Private Sector	17/06/2012	13:30:00 AM	T-5 (Riocentro)	The Rio +20 summit focuses on two topics: on the one hand a green economy in the context of sustainable development and poverty eradication and on the other hand the institutional framework for sustainable development. The side event aims to illustrate how biodiversity use can serve these two strategic objectives. In 2009, the Natural Resources Stewardship Circle of the aromatic, perfume and cosmetics industry (NRSC) committed to developing collaborative guidelines for ethical and sustainable sourcing of natural extracts from the traditional territories of indigenous peoples and local communities (ILCs) producers around the world. Currently, NRSC membership is made up of 20+ major international companies. In this event, the NRSC, in cooperation with the Secretariat of the Convention on Biological Diversity, Associacao Sociocultural Yawanawa, and Tribal Link Foundation will share experiences from the field and engage the audience in an open dialogue on the development of guidelines and the next steps forward.	Tribal Link Foundation	
Sustainable Development: Do we need a green industrial policy?	17/06/2012	13:30:00 AM	T-3 (Riocentro)	Industrial policy has made a forceful comeback. The global economic and financial crisis demanded swift action by governments to support and restructure productive activities, and industry in particular, in order to protect employment. At the same time global challenges such as climate change cannot be addressed without decisive policy changes in industry-related incentives and regulations. The conditions are ripe for placing industrial policy at the core of the policy agenda for green growth and sustainable development. Industry produces large amounts of emissions and pollution while being a major source of employment and wages. Rio + 20 thus become a unique forum for suggesting global and national industrial policies that are green, inclusive and economically dynamic. The side-event will bring together the business sector, governments, academia and representatives of civil society. It will aim at discussing the fundamental sustainability choices and proposing guiding principles and best practices for industrial policy.	United Nations Industrial Development Organization (UNIDO)	
Partenariat sur la Contribution des Organisations au DD	17/06/2012	13:30:00 AM	P3-B (Riocentro)	L?Organisation internationale de la Francophonie (OIF), a contribué de façon substantielle aux négociations et à l?adoption de la Norme ISO 26000 portant Lignes directrices du Développement durable publiée en novembre 2010. Pour le déploiement de cette norme, l?OIF a élaboré et adopté une stratégie propre en vue du développement d?un partenariat du type de 2 des Nations Unies. C?est ainsi que lors du Forum francophone préparatoire à Rio+20, un atelier s?est tenu le 7 février 2012 à Lyon, en France, qui a permis de faire un état des lieux détaillé des initiatives et des développements en cours au plan international en matière de responsabilité sociétale comme contribution des organisations au développement durable, illustrés par des exemples de déploiement dans des pays francophones. Ceci a abouti à l?adoption du Projet de Partenariat objet de l?évènement parallèle envisagé à Rio.	Institut de l'Énergie et de l'Environnement de la Francophonie	

China Going Green? A Civil Society Review of 20 years of Sustainable Development	17/06/2012	13:30:00 AM	T-9 (Riocentro)	The worsening pollution and intensifying ecological degradation in recent years has made it clear that China cannot continue to go about business as usual. Traditional development models are now under scrutiny. Chinese NGOs have joined together in critically reviewing the practices and challenges of sustainable development over the past two decades (1992-2011). Their collective effort has cumulated in a joint report, China Going Green? A Civil Society Review of 20 years of Sustainable Development. Covering a wide range of issues, from water pollution to climate change to green finance, the report will be launched at this side event. Lead authors from different NGOs will share their unique writing processes, which involved a multiplicity of stakeholders and their diverse views. This side event, as part of the ?China Going Green? Dialogues, is a rare opportunity to learn from seldom-heard independent voices within Chinese civil societies on the challenges and opportunities of the world?s fastest growing economy.	SEE Foundation	
Agricultural transition - into a viable food future	17/06/2012	13:30:00 AM	T-4 (Riocentro)	There is an urgent need to transform unsustainable agriculture and food systems. Industrial agriculture and other forms of unsustainable practices have caused dramatic problems. But resilient and sustainable modes of food production exist, and small scale food producers nourish more than 70% of the global population. How can we make the transition into agricultural production and food systems which can - drastically reduce poverty, - reduce climate change and cool the planet, - restore biodiversity, soil fertility and water resources, - improve livelihoods and provide employment for billions of people, - produce enough, good and nutritious food for 9 billion people or more? Examples of sustainable food systems and lessons learned from transition into such systems will be presented. Leader of farmers? organizations and international institutions will together with scientists and activists discuss how a transition into a viable food future can happen.	More and Better Network	
African Young Scientist Initiative on Climate Change and IKS	17/06/2012	13:30:00 AM	P3-4 (Riocentro)	The African Young Scientists Initiative on Climate Change and Indigenous Knowledge Systems (AYSICCIKS) seeks to participate in Rio+20 United Nations Conference on Sustainable Development, in Rio de Janeiro, Brazil, June 2012. The Initiative will organize a round table discussion and mini-exhibition to promote and showcase examples of African best practices on: the Role of African Young Scientists in Promoting Indigenous Knowledge Systems (IKS) for Sustainable Livelihoods within the context of climate change. It will aim at discussing the fundamental sustainability choices and proposing guiding principles and best practices for industrial policy.	United Nations Industrial Development Organization (UNIDO)	
Launch of report "Sustainable development for the 21st Century"	17/06/2012	15:30:00 AM	P3-E (Riocentro)	The side event will present the SD21 project?s synthesis report for policy makers. The report draws upon a series of studies carried out under the project, in addition to recent major assessments. The SD21 studies approach sustainable development from various perspectives: (a) expert assessment of the progress made since 1992, including a review of Agenda 21 and the Rio principles; (b) critical analysis of global scenario exercises since 1992; (c) future vision of sustainable development, as suggested by ecological economics, compared to the ?green economy? and ?business-as-usual? views; (d) sectoral perspectives on challenges and potential ways forward. The project also includes a scenario component which analyzes sustainable development options based on the most recent scenarios prepared by key institutions for Rio+20.	Division for Sustainable Development (UNDESA)	

China Going Green? Youth Environmental Actions Rising to the Challenges	17/06/2012	15:30:00 AM	T-8 (Riocentro)	China?s spectacular economic growth in the last two decades has led to unprecedented environmental problems. Against this background, many youth environmental groups have sprung up across China, reflecting the aspirations of a green future by the next generation. In recent years, passionate Chinese youth are rising to the challenge and flocking to join the battle of creating a sustainable future. This side event, as part of the ?China Going Green? Dialogues, will review the history, successes and challenges of Chinese youth environmental activism. Speakers will articulate a youth perspective on China?s development and future.	Shanshui Conservation Center	
Achievements of Central Africa for the implementation of Agenda 21	17/06/2012	15:30:00 AM	Auditorium 2 (Barra Arena)	In order to contribute to the implementation of Agenda 21, Central African countries had taken relevant measures and institutional frameworks to promote sustainable development in Central Africa. The Summit of Rio+20 is an excellent opportunity for these countries to share their achievements and lessons learnt with the rest of the world. It is in this framework that, the Central African Forests Commission (COMIFAC) which is an Intergovernmental Organization established in 2000 by the Heads of State of Central African Countries (ten countries members: Burundi, Cameroon, Central Africa Republic, Chad, Congo, Democratic Republic of Congo, Equatorial Guinea, Rwanda and Sao Tome & Principes) and the Economic Community of Central African States (ECCAS) want to organize this side-event. This meeting will contribute to the achievement of the objectives of this Summit by the fact that, topics which will address have a linkage with the thematic of Rio+20.	Central African Forests Commission (COMIFAC)	
Oceans In Google Earth as an Environmental Educational Tool- the Dominican Perspective	17/06/2012	15:30:00 AM	T-9 (Riocentro)	Global Foundation for Democracy and Development (GFDD) actively collaborates with Ocean in Google Earth as the institution?s local partner in the Dominican Republic to provide and create content for ?Explore the Ocean?, a GFDD educational initiative, and one that will be highlighted at a special side panel to be held at the Rio + 20 Conference. Ocean in Google Earth collects local stories and locally-based knowledge from people who care about the ocean environment worldwide. These stories are related to six key areas: ecosystems, marine life, ocean and atmosphere, science and exploration, marine protected areas and human connections. GFDD and Ocean in Google Earth have teamed up to create a geo-referenced layer on Google Earth named Mission Blue. Mission Blue is built using a multimedia format including video footage, pictures, local music and the presentation of short stories in Spanish highlighting scientific studies, creating awareness of marine and coastal ecosystems and highlighting best practices as well as documenting the challenges & opportunities that lie ahead for the oceans.	Global Foundation for Democracy and Development	
Seminaire d'echange et d'information sur le Lac Tchad	17/06/2012	15:30:00 AM	P3-6 (Riocentro)	c'est un séminaire d?échange et d'information sur le Lac Tchad	Chad	
Tax justice: key to sustainable development?	17/06/2012	15:30:00 AM	T-6 (Riocentro)	A lack of resources hampers poor countries? ability to develop sustainably. Indeed insufficient financial resources are a major reason for the gaps in implementing the agreed sustainable development commitments and action programmes since the 1992 Rio Summit on Environment and Development. Tax revenues can provide governments with the sustainable and predictable resources they need. However the ability of governments to collect tax revenues is systematically undermined by a lack of capacity in tax authorities, poor tax systems and financial secrecy. This side event will explore how the obstacles to mobilising tax revenues could be overcome in the interests of sustainable development globally, particularly in developing countries.	Christian Aid	
Dialogue of Chinese, European and South American Civil Society Rio+20	17/06/2012	15:30:00 AM	T-11 (Riocentro)	There are many converging processes contributing to the preparation of the conference, the commitment of civil society is one of those. For over a year, civil society organizations in China, Europe and South America have been preparing for this world event and are expected to make contributions to Rio+20 from their perspectives. We are well aware, perhaps more than ever, that the interdependencies at a global level are irreversible, and world governance and the institutional framework for sustainable development cannot work without regional and global consensus and joint actions. In this sense, Association 4D and CEF are willing to organize during Rio+20 Conference a side event ?Jointly Heading for the Future We Want, calling on a Tripartite Dialogue of Chinese, European and South American Civil Societies in Rio+20?.	Collectif RIO+20	

Population, Rights and Sustainability: Voices from the Global South	17/06/2012	15:30:00 AM	P3-F (Riocentro)	This workshop will focus on the perspectives of Voices from the South on how addressing population dynamics at national and community levels in ways that respect and protect human rights can make a significant contribution to sustainable development. Focused on the intersection between the ?social? and ?environmental? dimensions of sustainable development, this workshop will bring together global and local perspectives on how population dynamics, including growth, urbanization, migration etc affect sustainable development priorities, including the green economy, climate change, environmental degradation, poverty alleviation and gender equality. Presentations will focus on how the provision of voluntary family planning services that respect and protect rights can be combined with environmental approaches to meet a range of sustainable development needs defined at community level that have global potential and impact.	Population and Climate Change Alliance (PCCA)	
Women Empowering Women: From Stockholm to Rio, following footprints & continuing the legacy of women's leadership in advancing sustainable development, gender equality, and human rights from local, national, to global	17/06/2012	15:30:00 AM	T-5 (Riocentro)	The side event aims to trace, compile and highlight the role and contribution of exceptional women leaders , in the local, national and global scene to empower women to gain equality with men, enjoy human rights, and move towards a sustainable present and future for all, within the timeframe of the first United Nations Conference on the Human Environment(UNCHE) in Stockholm, Sweden in 1972 to the coming United Nations Conference on the Environment , Rio+20 in June 2012.	Philippines Women University (PWU)	
We Canada: A Journey for Canadian Leadership at Rio+20	17/06/2012	15:30:00 AM	UN2 (Barra Arena)	The Canadian Earth Summit Coalition has been the focal point for Canadian civil society in the lead-up to Rio+20. The side event is an opportunity for the Coalition to present highlights of its We Canada initiative ? an ambitious public engagement and policy development strategy. During the event, we will: release a comprehensive report detailing priorities of over 7,000 Canadians from public dialogues; detail the successes and lessons learned from an extensive cross-Canada tour; preview a short ?Rio+20 cut? of a documentary of the We Canada journey, including interviews with young Canadians; and, discuss the process of developing and proposing policy initiatives. We Canada Champion and sustainability advocate Severn Cullis-Suzuki will provide a keynote address, and Coalition partners will weigh in on the importance of civil society leadership. In addition to highlighting policy possibilities, the event will be an opportunity to share best practices for cross-country public engagement and coalition-building.	We Canada Initiative	
Creating a More Effective System of Environmental and Sustainable Development Governance	17/06/2012	15:30:00 AM	T-10 (Riocentro)	This session will focus on the need to strengthen and democratize the institutional framework for an emerging global system of sustainable development governance and an international rule of law. We will address the need to uplevel UNEP into an implementing and regulating agency and to transform the UN Commission on Sustainable Development (CSD) into a Council with binding and enforceable coordinating powers.	Association of World Citizens	
Zero Waste is Happening! Successes & struggles for real sustainability	17/06/2012	15:30:00 AM	T-3 (Riocentro)	In cities around the world, grassroots recycling workers, visionary local leaders, and innovative practitioners are showing that zero waste is an achievable goal whose day has come. In contrast with the primitive idea of burning our garbage, recycling and composting create livelihoods, save money, and protect the environment and public health. These efforts go hand-in-hand with clean production, producer responsibility, and waste minimization programs for dangerous and hard-to-recycle materials. Together, these practical, bottom-up strategies also provide some of the best decentralized urban solutions for reducing climate pollution and conserving energy and natural resources. This event will feature leading-edge practitioners from Brazil, India, the United States, and several other countries where workers and environmentalists have come together to support truly sustainable approaches to waste and development. They will present their achievements along the road to zero waste, countervailing forces, and will describe lessons they have learned to share with other communities.	Global Alliance for Incinerator Alternatives (GAIA)	
Valuing Ecosystem Services	17/06/2012	15:30:00 AM	T-4 (Riocentro)	In January 2011, The Nature Conservancy and The Dow Chemical Company announced a breakthrough collaboration?one that will help Dow and the business community recognize, value and incorporate nature into global business goals, decisions and strategies.	The Nature Conservancy	
Sustainable Construction	17/06/2012	15:30:00 AM	P3-A (Riocentro)	The event will be about the contribution of the construction industry to sustainable development	Brazil	

Institutional and Strategic Frameworks for Sustainable Development in Africa: Integrating the three Pillars of Sustainable Development	17/06/2012	15:30:00 AM	P3-B (Riocentro)	Effective and well-coordinated institutions and strategies are essential in achieving a balanced integration of economic, social and environmental interests, central to accelerating progress towards sustainable development. As such, it is pertinent that Africa is adequately prepared to articulate its vision for a reformed global institutional framework that could ensure effective linkages and synergies, while at the same time supporting institutions at the regional, sub-regional, national and local levels to effectively implement sustainable development commitments. This side event will provide Africa and its partners a platform to deliberate on institutional frameworks at the regional, sub-regional, national and local levels that are responsive to the requirements of sustainable development, as well as on the model of global level institutional architecture that could support such institutions and their strategies. It will also serve as a launching platform for further consultations on the functioning and implementation of institutions and strategies in Africa after Rio+20.	Economic Commission for Africa (ECA)	
Launch of report "Sustainable development for the 21st Century"	17/06/2012	15:30:00 AM	P3-E (Riocentro)	The side event will present the SD21 project?s synthesis report for policy makers. The report draws upon a series of studies carried out under the project, in addition to recent major assessments. The SD21 studies approach sustainable development from various perspectives: (a) expert assessment of the progress made since 1992, including a review of Agenda 21 and the Rio principles; (b) critical analysis of global scenario exercises since 1992; (c) future vision of sustainable development, as suggested by ecological economics, compared to the ?green economy? and ?business-as-usual? views; (d) sectoral perspectives on challenges and potential ways forward. For over a year, civil society organizations in China, Europe and South America have been preparing for this world event and are expected to make contributions to Rio+20 from their perspectives. We are well aware, perhaps more than ever, that the interdependencies at a global level are irreversible, and world governance and the institutional framework for sustainable development cannot work without regional and global consensus and joint actions. In this sense, Association 4D and CEF are willing to organize during Rio+20 Conference a side event ?Jointly Heading for the Future We Want, calling on a Tripartite Dialogue of Chinese, European and South American Civil Societies in Rio+20?.	Collectif RIO+20	
Population, Rights and Sustainability: Voices from the Global South	17/06/2012	15:30:00 AM	P3-F (Riocentro)	This workshop will focus on the perspectives of Voices from the South on how addressing population dynamics at national and community levels in ways that respect and protect human rights can make a significant contribution to sustainable development. Focused on the intersection between the ?social? and ?environmental? dimensions of sustainable development, this workshop will bring together global and local perspectives on how population dynamics, including growth, urbanization, migration etc affect sustainable development priorities, including the green economy, climate change, environmental degradation, poverty alleviation and gender equality. Presentations will focus on how the provision of voluntary family planning services that respect and protect rights can be combined with environmental approaches to meet a range of sustainable development needs defined at community level that have global potential and impact.	Population and Climate Change Alliance (PCCA)	
Women Empowering Women: From Stockholm to Rio, following footprints & continuing the legacy of women's leadership in advancing sustainable development, gender equality, and human rights from local, national, to global	17/06/2012	15:30:00 AM	T-5 (Riocentro)	The side event aims to trace, compile and highlight the role and contribution of exceptional women leaders , in the local, national and global scene to empower women to gain equality with men, enjoy human rights, and move towards a sustainable present and future for all, within the timeframe of the first United Nations Conference on the Human Environment(UNCHE) in Stockholm, Sweden in 1972 to the coming United Nations Conference on the Environment , Rio+20 in June 2012.	Philippines Women University (PWU)	
We Canada: A Journey for Canadian Leadership at Rio+20	17/06/2012	15:30:00 AM	UN2 (Barra Arena)	The Canadian Earth Summit Coalition has been the focal point for Canadian civil society in the lead-up to Rio+20. The side event is an opportunity for the Coalition to present highlights of its We Canada initiative ? an ambitious public engagement and policy development strategy. During the event, we will: release a comprehensive report detailing priorities of over 7,000 Canadians from public dialogues; detail the successes and lessons learned from an extensive cross-Canada tour; preview a short ?Rio+20 cut? of a documentary of the We Canada journey, including interviews with young Canadians; and, discuss the process of developing and proposing policy initiatives. We Canada Champion and sustainability advocate Severn Cullis-Suzuki will provide a keynote address, and Coalition partners will weigh in on the importance of civil society leadership. In addition to highlighting policy possibilities, the event will be an opportunity to share best practices for cross-country public engagement and coalition-building.	We Canada Initiative	
Creating a More Effective System of Environmental and Sustainable Development Governance	17/06/2012	15:30:00 AM	T-10 (Riocentro)	This session will focus on the need to strengthen and democratize the institutional framework for an emerging global system of sustainable development governance and an international rule of law. We will address the need to uplevel UNEP into an implementing and regulating agency and to transform the UN Commission on Sustainable Development (CSD) into a Council with binding and enforceable coordinating powers.	Association of World Citizens	

Zero Waste is Happening! Successes & struggles for real sustainability	17/06/2012	15:30:00 AM	T-3 (Riocentro)	In cities around the world, grassroots recycling workers, visionary local leaders, and innovative practitioners are showing that zero waste is an achievable goal whose day has come. In contrast with the primitive idea of burning our garbage, recycling and composting create livelihoods, save money, and protect the environment and public health. These efforts go hand-in-hand with clean production, producer responsibility, and waste minimization programs for dangerous and hard-to-recycle materials. Together, these practical, bottom-up strategies also provide some of the best decentralized urban solutions for reducing climate pollution and conserving energy and natural resources. This event will feature leading-edge practitioners from Brazil, India, the United States, and several other countries where workers and environmentalists have come together to support truly sustainable approaches to waste and development. They will present their achievements along the road to zero waste, countervailing forces, and will describe lessons they have learned to share with other communities.	Global Alliance for Incinerator Alternatives (GAIA)	
Valuing Ecosystem Services	17/06/2012	15:30:00 AM	T-4 (Riocentro)	In January 2011, The Nature Conservancy and The Dow Chemical Company announced a breakthrough collaboration?one that will help Dow and the business community recognize, value and incorporate nature into global business goals, decisions and strategies.	The Nature Conservancy	
Sustainable Construction	17/06/2012	15:30:00 AM	P3-A (Riocentro)	The event will be about the contribution of the construction industry to sustainable development	Brazil	
Institutional and Strategic Frameworks for Sustainable Development in Africa: Integrating the three Pillars of Sustainable Development	17/06/2012	15:30:00 AM	P3-B (Riocentro)	Effective and well-coordinated institutions and strategies are essential in achieving a balanced integration of economic, social and environmental interests, central to accelerating progress towards sustainable development. As such, it is pertinent that Africa is adequately prepared to articulate its vision for a reformed global institutional framework that could ensure effective linkages and synergies, while at the same time supporting institutions at the regional, sub-regional, national and local levels to effectively implement sustainable development commitments. This side event will provide Africa and its partners a platform to deliberate on institutional frameworks at the regional, sub-regional, national and local levels that are responsive to the requirements of sustainable development, as well as on the model of global level institutional architecture that could support such institutions and their strategies. It will also serve as a launching platform for further consultations on the functioning and implementation of institutions and strategies in Africa after Rio+20.	Economic Commission for Africa (ECA)	
Launch of report "Sustainable development for the 21st Century"	17/06/2012	15:30:00 AM	P3-E (Riocentro)	The side event will present the SD21 project?s synthesis report for policy makers. The report draws upon a series of studies carried out under the project, in addition to recent major assessments. The SD21 studies approach sustainable development from various perspectives: (a) expert assessment of the progress made since 1992, including a review of Agenda 21 and the Rio principles; (b) critical analysis of global scenario exercises since 1992; (c) future vision of sustainable development, as suggested by ecological economics, compared to the ?green economy? and ?business-as-usual? views; (d) sectoral perspectives on challenges and potential ways forward. The project also includes a scenario component which analyzes sustainable development options based on the most recent scenarios prepared by key institutions for Rio+20.	Division for Sustainable Development (UNDESA)	
China Going Green? Youth Environmental Actions Rising to the Challenges	17/06/2012	15:30:00 AM	T-8 (Riocentro)	China?s spectacular economic growth in the last two decades has led to unprecedented environmental problems. Against this background, many youth environmental groups have sprung up across China, reflecting the aspirations of a green future by the next generation. In recent years, passionate Chinese youth are rising to the challenge and flocking to join the battle of creating a sustainable future. This side event, as part of the ?China Going Green? Dialogues, will review the history, successes and challenges of Chinese youth environmental activism. Speakers will articulate a youth perspective on China?s development and future.	Shanshui Conservation Center	
Achievements of Central Africa for the implementation of Agenda 21	17/06/2012	15:30:00 AM	Auditorium 2 (Barra Arena)	In order to contribute to the implementation of Agenda 21, Central African countries had taken relevant measures and institutional frameworks to promote sustainable development in Central Africa. The Summit of Rio+20 is an excellent opportunity for these countries to share their achievements and lessons learnt with the rest of the world. It is in this framework that, the Central African Forests Commission (COMIFAC) which is an Intergovernmental Organization established in 2000 by the Heads of State of Central African Countries (ten countries members: Burundi, Cameroon, Central Africa Republic, Chad, Congo, Democratic Republic of Congo, Equatorial Guinea, Rwanda and Sao Tome & Principes) and the Economic Community of Central African States (ECCAS) want to organize this side-event. This meeting will contribute to the achievement of the objectives of this Summit by the fact that, topics which will address have a linkage with the thematic of Rio+20.	Central African Forests Commission (COMIFAC)	

Oceans In Google Earth as an Environmental Educational Tool- the Dominican Perspective	17/06/2012	15:30:00 AM	T-9 (Riocentro)	Global Foundation for Democracy and Development (GFDD) actively collaborates with Ocean in Google Earth as the institution?s local partner in the Dominican Republic to provide and create content for ?Explore the Ocean?, a GFDD educational initiative, and one that will be highlighted at a special side panel to be held at the Rio + 20 Conference. Ocean in Google Earth collects local stories and locally-based knowledge from people who care about the ocean environment worldwide. These stories are related to six key areas: ecosystems, marine life, ocean and atmosphere, science and exploration, marine protected areas and human connections. GFDD and Ocean in Google Earth have teamed up to create a geo-referenced layer on Google Earth named Mission Blue. Mission Blue is built using a multimedia format including video footage, pictures, local music and the presentation of short stories in Spanish highlighting scientific studies, creating awareness of marine and coastal ecosystems and highlighting best practices as well as documenting the challenges & opportunities that lie ahead for the oceans.	Global Foundation for Democracy and Development	
Seminaire d'echange et d'information sur le Lac Tchad	17/06/2012	15:30:00 AM	P3-6 (Riocentro)	c'est un séminaire d?échange et d'information sur le Lac Tchad	Chad	
Tax justice: key to sustainable development?	17/06/2012	15:30:00 AM	T-6 (Riocentro)	A lack of resources hampers poor countries? ability to develop sustainably. Indeed insufficient financial resources are a major reason for the gaps in implementing the agreed sustainable development commitments and action programmes since the 1992 Rio Summit on Environment and Development. Tax revenues can provide governments with the sustainable and predictable resources they need. However the ability of governments to collect tax revenues is systematically undermined by a lack of capacity in tax authorities, poor tax systems and financial secrecy. This side event will explore how the obstacles to mobilising tax revenues could be overcome in the interests of sustainable development globally, particularly in developing countries.	Christian Aid	
Dialogue of Chinese, European and South American Civil Society Rio+20	17/06/2012	15:30:00 AM	T-11 (Riocentro)	There are many converging processes contributing to the preparation of the conference, the commitment of civil society is one of those. For over a year, civil society organizations in China, Europe and South America have been preparing for this world event and are expected to make contributions to Rio+20 from their perspectives. We are well aware, perhaps more than ever, that the interdependencies at a global level are irreversible, and world governance and the institutional framework for sustainable development cannot work without regional and global consensus and joint actions. Bringing Climate Finance to Grassroots Women - What does it take?	17/06/2012	17:30:00 AM	UN2 (Barra Arena)	Women in many countries are disproportionally affected by climate change impacts with many women in developing countries hit the worst. They have different experiences, knowledge and capabilities from men which are instrumental for effective action on improving climate resilience, safeguarding forest stocks and reducing mitigation. In many cases, grassroots women in developing countries have taken action with community-based action, providing leadership, initiative and innovation. However, existing public financing instruments for climate change action very insufficiently are taking gender-differentiated impacts and contributions into account in allocating funding for projects and programs in developing countries to deal with climate change. Even where dedicated climate financing and climate-related development financing instrument display some gender-awareness, fund structures such as allocation frameworks or financial instruments used very rarely ensure that grassroots women, those at the forefront of the fight against climate change, are direct beneficiaries of dedicated public funding.	Heinrich Boell Foundation	
FINANCING SUSTAINABLE DEVELOPMENT IN AFRICA	17/06/2012	17:30:00 AM	T-4 (Riocentro)	Over recent decades, debate has been raging on the effectiveness of aid to achieve economic or development targets, with increasing focus on improving effectiveness of use, in particular in view of the current multiple crises. The potential result is a vicious cycle, i.e. the apparent lack of legitimacy that results from ineffective use of available resources may serve to reinforce the existing tendencies towards shrinking financing. This side event will serve as a platform for dialogue between African member States and their partners on: how resources can be mobilized for sustainable development ? both domestically and internationally ? with a particular emphasis on innovative sources of finance and leveraging resources from the private sector; and how national institutions can be assisted to effectively utilize these resources. The expectation is that active debate will lead to increased understanding of the options available for African countries, with regards to fostering the implementation of sustainable development commitments.	African Development Bank	
Another work is possible: a trade union contribution to Sustainable Development	17/06/2012	17:30:00 AM	T-2 (Riocentro)	A sustainable future requires major transformation in our current economic model. In a context of rising inequalities, unemployment, precarious work and irreversible environmental degradation, the labour movement is mobilised to promote an alternative model, where people and the planet are at the centre, and where a Just Transition is designed to accompany us all in the process of achieving it. Hear inspiring examples and share ideas about what trade unions and workers are doing to create more sustainable communities and how workers contribute to sustainable development.	International Trade Union Confederation (ITUC) on behalf of the Workers and Trade Union Major Group	
ICTs, the foundation of our sustainable future	17/06/2012	17:30:00 AM	P3-6 (Riocentro)	Information and communication technologies (ICTs) play a critical role to promote the integration of the three pillars of sustainable development. ICTs are the most inclusive infrastructure on the planet, with 90% of the world population connected to mobile services and over one third connected to the Internet. ICTs are a truly unique platform for progress that creates wealth, optimize the use of natural resources, enables a low carbon economy and give equitable access to basic public services, such as health care and education. ICTs play a pivotal role in monitoring, predicting and detecting natural disasters. Using these technologies to mitigate disasters contributes to saving human life, protecting infrastructure, and supporting economic activity leading to sustainable development. The side event ?ICTs, the foundation of our sustainable future? will look at specific ICT applications and services that have the capacity to contribute to the transition towards a green economy and to poverty alleviation.	International Telecommunication Union (ITU)	
Harnessing globalization for the green economy	17/06/2012	17:30:00 AM	P3-E (Riocentro)	Efforts to advance the green economy face tremendous challenges. They have to receive the sustained support from citizen and hence work within national economic systems to meet specific constraints and needs. They also have to be coordinated at global level to make the whole greater than the sum of its parts and increase the net benefits to ?turn green? for any country. Budding initiatives for greening the economy demonstrate that every green economy will be unique. They also suggest that their public policy content and the specific policy and measures used can turn conflicting in the current context of lingering crisis in some OECD countries and exacerbated power relations induced by fast convergence across developing and developed economies. How best harness globalization for the green economy is the issue at stake we intend to address in this side-event.	Institut du Developpement Durable et des Relations Internationales (IDDRI)	

South-South Cooperation and Lessons Learned from Payment for Environme	17/06/2012	17:30:00 AM	P3-B (Riocentro)	Since 2008, FAS is responsible for implementing the largest Payment for Environmental Services (PES) program in the world, the Bolsa Floresta Program, in the State of Amazonas, Brazil. Within this context, FAS organized several initiatives on South-South cooperation with Mozambique (2009-2011), Panamá (2010), Indonesia (2010) and Cameroon, Central Africa Republic, Democratic Republic of Congo, Gabon, Madagascar and Republic of Congo (2010-2011), with support from different institutions such as Idesam, World Bank, CIFOR, IIED, and many others. This event thus will present and discuss different initiatives on PES, Reducing GHG Emissions from Deforestation and Forest Degradation (REDD) and innovative institutional frameworks in Brazil and other forested countries, aiming at extracting lessons learned and identifying opportunities and bottlenecks, analysis and experience exchange, considering South-South cooperation initiatives	Fundação Amazonas Sustentável	
Green Economy: an outlook from Central America and the Caribbean	17/06/2012	17:30:00 AM	T-10 (Riocentro)	The event aims to explore the concept of Green Economy from a Central American perspective and contribute to the debate on what the implications of Green Economy could be for the Central American and Caribbean region, given its extreme environmental, social, political and economic vulnerability. This will be done through three short presentations and a short film giving concrete examples from Central America. Topics to be explored include: ? Green Economy: is it based on assumptions or can such transition really be effective to produce the profound changes required to save life on the planet? ? If not, is Green Economy just a cosmetic change to maintain status quo? ? What type of governance would be necessary to avoid the latter? ? How could the democratic ownership of the Green Economy be increased? ? What is needed to avoid the indebtness of the states to nature and to its populations?	World Council of Churches and the Lutheran World Federation	
Partenariat contribution des organisations au DD: Apport d'ISO 26000	17/06/2012	17:30:00 AM	P3-A (Riocentro)	L?Organisation internationale de la Francophonie (OIF), a contribué de façon substantielle aux négociations et à l?adoption de la Norme ISO 26000 portant Lignes directrices du Développement durable publiée en novembre 2010. Pour le déploiement de cette norme, l?OIF a élaboré et adopté une stratégie propre en vue du développement d?un partenariat du type de 2 des Nations Unies. C?est ainsi que lors du Forum francophone préparatoire à Rio+20, un atelier s?est tenu le 7 février 2012 à Lyon, en France, qui a permis de faire un état des lieux détaillé des initiatives et des développements en cours au plan international en matière de responsabilité sociétale comme contribution des organisations au développement durable, illustrés par des exemples de déploiement dans des pays francophones. Ceci a abouti à l?adoption du Projet de Partenariat objet de l?évènement parallèle envisagé à Rio.	Organisation internationale de la Francophonie (OIF)	
10 years of Essential Services Charter: review, case studies, outlook	17/06/2012	17:30:00 AM	T-3 (Riocentro)	Johannesburg, 2002, IGD, with the support of UNITAR, has presented the Charter of essential services, which is the first step of a worldwide movement for the recognition of a right of access for all to basic services. The matter of access to basic services (water, sanitation, waste management, energy, transport, telecommunications, education, health, safety) is closely related to issues of sustainable development and poverty reduction. Indeed, these services are a prerequisite for a decent life and a healthy habitat, they condition the urban and economic development and they must be organized by preserving natural resources. If water and sanitation had been highlighted into the Millennium Development Goals and through the recognition of a right to water, strong efforts must be done for other services in a perspective of continuous improvement. Rio+20 is an opportunity to review both normative and operational point of view and to suggest some ways for the future in advancing the improvement of access to all services.	Institut de la Gestion Deleguee	
Imagine All The People: Advancing a Planetary Movement	17/06/2012	17:30:00 AM	T-9 (Riocentro)	The planetary challenge is urgent and systemic. The world confronts twenty-first century perils hobbled by twentieth century mindsets and institutions, a dangerous gap that bodes ill. A just and sustainable civilization is still possible. We can forge a path to a different future: a world of lives enriched and nature resilient. A fragmented movement is incapable of systemic transformation. Civil society efforts are vital, but lack an overarching vision and strategy matched to the complexity of the historic task. A critical social actor is missing from the global stage. The transition awaits the awakening of a vast cultural and political movement engaged on all fronts in a supranational project of global citizenship. The global citizens movement will be adaptive and polycentric. The living movement will evolve as a dispersed ecology of associations, spawning centers of influence in every nation and community.	Centre for Environment and Development	

World Youth in Action	17/06/2012	17:30:00 AM	T-8 (Riocentro)	?World Youth in Action? is an opportunity to gather the efforts currently being done by and for the youth that will impact the future of young people around the world and its relationships with other segments of society. The event will be facilitated by a group of international youth (ages 18 ? 29) currently traveling on the Up with People program. These young people are advocating for the betterment of the world, not by just talking, but by doing. They travel, they perform, and they impact. The event will work as a forum for sharing ideas and experiences about best sustainable practices around the world that will contribute to the future we want. There will also be selected musical performances as a way to encourage the audience to engage in the topics being presented, while also providing a more enjoyable environment and a break from other discussions at Rio+20.	Up with People

Within this context, FAS organized several initiatives on South-South cooperation with Mozambique (2009-2011), Panamá (2010), Indonesia (2010) and Cameroon, Central Africa Republic, Democratic Republic of Congo, Gabon, Madagascar and Republic of Congo (2010-2011), with support from different institutions such as Idesam, World Bank, CIFOR, IIED, and many others. This event thus will present and discuss different initiatives on PES, Reducing GHG Emissions from Deforestation and Forest Degradation (REDD) and innovative institutional frameworks in Brazil and other forested countries, aiming at extracting lessons learned and identifying opportunities and bottlenecks, analysis and experience exchange, considering South-South cooperation initiatives	Fundação Amazonas Sustentável	
Green Economy: an outlook from Central America and the Caribbean	17/06/2012	17:30:00 AM	T-10 (Riocentro)	The event aims to explore the concept of Green Economy from a Central American perspective and contribute to the debate on what the implications of Green Economy could be for the Central American and Caribbean region, given its extreme environmental, social, political and economic vulnerability. This will be done through three short presentations and a short film giving concrete examples from Central America. Topics to be explored include: ? Green Economy: is it based on assumptions or can such transition really be effective to produce the profound changes required to save life on the planet? ? If not, is Green Economy just a cosmetic change to maintain status quo? ? What type of governance would be necessary to avoid the latter? ? How could the democratic ownership of the Green Economy be increased? ? What is needed to avoid the indebtness of the states to nature and to its populations?	World Council of Churches and the Lutheran World Federation	
Partenariat contribution des organisations au DD: Apport d'ISO 26000	17/06/2012	17:30:00 AM	P3-A (Riocentro)	L?Organisation internationale de la Francophonie (OIF), a contribué de façon substantielle aux négociations et à l?adoption de la Norme ISO 26000 portant Lignes directrices du Développement durable publiée en novembre 2010. Pour le déploiement de cette norme, l?OIF a élaboré et adopté une stratégie propre en vue du développement d?un partenariat du type de 2 des Nations Unies. C?est ainsi que lors du Forum francophone préparatoire à Rio+20, un atelier s?est tenu le 7 février 2012 à Lyon, en France, qui a permis de faire un état des lieux détaillé des initiatives et des développements en cours au plan international en matière de responsabilité sociétale comme contribution des organisations au développement durable, illustrés par des exemples de déploiement dans des pays francophones. Ceci a abouti à l?adoption du Projet de Partenariat objet de l?évènement parallèle envisagé à Rio.	Organisation internationale de la Francophonie (OIF)	
10 years of Essential Services Charter: review, case studies, outlook	17/06/2012	17:30:00 AM	T-3 (Riocentro)	Johannesburg, 2002, IGD, with the support of UNITAR, has presented the Charter of essential services, which is the first step of a worldwide movement for the recognition of a right of access for all to basic services. The matter of access to basic services (water, sanitation, waste management, energy, transport, telecommunications, education, health, safety) is closely related to issues of sustainable development and poverty reduction. Indeed, these services are a prerequisite for a decent life and a healthy habitat, they condition the urban and economic development and they must be organized by preserving natural resources. If water and sanitation had been highlighted into the Millennium Development Goals and through the recognition of a right to water, strong efforts must be done for other services in a perspective of continuous improvement. Rio+20 is an opportunity to review both normative and operational point of view and to suggest some ways for the future in advancing the improvement of access to all services.	Institut de la Gestion Deleguee	

Imagine All The People: Advancing a Planetary Movement	17/06/2012	17:30:00 AM	T-9 (Riocentro)	The planetary challenge is urgent and systemic. The world confronts twenty-first century perils hobbled by twentieth century mindsets and institutions, a dangerous gap that bodes ill. A just and sustainable civilization is still possible. We can forge a path to a different future: a world of lives enriched and nature resilient. A fragmented movement is incapable of systemic transformation. Civil society efforts are vital, but lack an overarching vision and strategy matched to the complexity of the historic task. A critical social actor is missing from the global stage. The transition awaits the awakening of a vast cultural and political movement engaged on all fronts in a supranational project of global citizenship. The global citizens movement will be adaptive and polycentric. The living movement will evolve as a dispersed ecology of associations, spawning centers of influence in every nation and community.	Centre for Environment and Development	
World Youth in Action	17/06/2012	17:30:00 AM	T-8 (Riocentro)	?World Youth in Action? is an opportunity to gather the efforts currently being done by and for the youth that will impact the future of young people around the world and its relationships with other segments of society. The event will be facilitated by a group of international youth (ages 18 ? 29) currently traveling on the Up with People program. These young people are advocating for the betterment of the world, not by just talking, but by doing. They travel, they perform, and they impact. The event will work as a forum for sharing ideas and experiences about best sustainable practices around the world that will contribute to the future we want. There will also be selected musical performances as a way to encourage the audience to engage in the topics being presented, while also providing a more enjoyable environment and a break from other discussions at Rio+20.	Up with People	
Bringing Climate Finance to Grassroots Women - What does it take?	17/06/2012	17:30:00 AM	UN2 (Barra Arena)	Women in many countries are disproportionally affected by climate change impacts with many women in developing countries hit the worst. They have different experiences, knowledge and capabilities from men which are instrumental for effective action on improving climate resilience, safeguarding forest stocks and reducing mitigation. In many cases, grassroots women in developing countries have taken action with community-based action, providing leadership, initiative and innovation. However, existing public financing instruments for climate change action very insufficiently are taking gender-differentiated impacts and contributions into account in allocating funding for projects and programs in developing countries to deal with climate change. Even where dedicated climate financing and climate-related development financing instrument display some gender-awareness, fund structures such as allocation frameworks or financial instruments used very rarely ensure that grassroots women, those at the forefront of the fight against climate change, are direct beneficiaries of dedicated public funding.	Heinrich Boell Foundation	
FINANCING SUSTAINABLE DEVELOPMENT IN AFRICA	17/06/2012	17:30:00 AM	T-4 (Riocentro)	Over recent decades, debate has been raging on the effectiveness of aid to achieve economic or development targets, with increasing focus on improving effectiveness of use, in particular in view of the current multiple crises. The potential result is a vicious cycle, i.e. the apparent lack of legitimacy that results from ineffective use of available resources may serve to reinforce the existing tendencies towards shrinking financing. This side event will serve as a platform for dialogue between African member States and their partners on: how resources can be mobilized for sustainable development ? both domestically and internationally ? with a particular emphasis on innovative sources of finance and leveraging resources from the private sector; and how national institutions can be assisted to effectively utilize these resources. The expectation is that active debate will lead to increased understanding of the options available for African countries, with regards to fostering the implementation of sustainable development commitments.	African Development Bank	
Another work is possible: a trade union contribution to Sustainable Development	17/06/2012	17:30:00 AM	T-2 (Riocentro)	A sustainable future requires major transformation in our current economic model. In a context of rising inequalities, unemployment, precarious work and irreversible environmental degradation, the labour movement is mobilised to promote an alternative model, where people and the planet are at the centre, and where a Just Transition is designed to accompany us all in the process of achieving it. Hear inspiring examples and share ideas about what trade unions and workers are doing to create more sustainable communities and how workers contribute to sustainable development.	International Trade Union Confederation (ITUC) on behalf of the Workers and Trade Union Major Group	

ICTs, the foundation of our sustainable future	17/06/2012	17:30:00 AM	P3-6 (Riocentro)	Information and communication technologies (ICTs) play a critical role to promote the integration of the three pillars of sustainable development. ICTs are the most inclusive infrastructure on the planet, with 90% of the world population connected to mobile services and over one third connected to the Internet. ICTs are a truly unique platform for progress that creates wealth, optimize the use of natural resources, enables a low carbon economy and give equitable access to basic public services, such as health care and education. ICTs play a pivotal role in monitoring, predicting and detecting natural disasters. Using these technologies to mitigate disasters contributes to saving human life, protecting infrastructure, and supporting economic activity leading to sustainable development. The side event ?ICTs, the foundation of our sustainable future? will look at specific ICT applications and services that have the capacity to contribute to the transition towards a green economy and to poverty alleviation.	International Telecommunication Union (ITU)	
Harnessing globalization for the green economy	17/06/2012	17:30:00 AM	P3-E (Riocentro)	Efforts to advance the green economy face tremendous challenges. They have to receive the sustained support from citizen and hence work within national economic systems to meet specific constraints and needs. They also have to be coordinated at global level to make the whole greater than the sum of its parts and increase the net benefits to ?turn green? for any country. Budding initiatives for greening the economy demonstrate that every green economy will be unique. They also suggest that their public policy content and the specific policy and measures used can turn conflicting in the current context of lingering crisis in some OECD countries and exacerbated power relations induced by fast convergence across developing and developed economies. How best harness globalization for the green economy is the issue at stake we intend to address in this side-event.	Institut du Developpement Durable et des Relations Internationales (IDDRI)	
South-South Cooperation and Lessons Learned from Payment for Environme	17/06/2012	17:30:00 AM	P3-B (Riocentro)	Since 2008, FAS is responsible for implementing the largest Payment for Environmental Services (PES) program in the world, the Bolsa Floresta Program, in the State of Amazonas, Brazil. Within this context, FAS organized several initiatives on South-South cooperation with Mozambique (2009-2011), Panamá (2010), Indonesia (2010) and Cameroon, Central Africa Republic, Democratic Republic of Congo, Gabon, Madagascar and Republic of Congo (2010-2011), with support from different institutions such as Idesam, World Bank, CIFOR, IIED, and many others. Demonstration of Save One Megawatt Power a Day	17/06/2012	19:30:00 AM	T-9 (Riocentro)	Shweta Marandi (http://www.unep.org/tunza/children/inner.asp?ct=actions&ac=bulletin_board&bd=hero_profile&hr=shweta) started a campaign for the frugal use of electricity.Today she has the support of over 10,000 students to save 100 Watt/hour of electricity a day. And the campaign is spreading. UNEP made Shweta Hero of the month for her successful campaign. She or her companions would present a demonstration of the campaign as a side event	Tarumitra	
Certified Green - The Role and Impacts of Certification in the Green Economy	17/06/2012	19:30:00 AM	T-8 (Riocentro)	Every year, consumers spend billions of dollars on products with environmental and social certifications. What impact do these labels have? The Committee on Sustainability Assessment (COSA) will unveil the results of six years of research on sustainability initiatives. The presentation will be followed by an expert panel discussion on how innovative policy makers, foundations and private companies are using certification and other approaches to create a green economy. The panel discussion will be held in English only.	Equiterre	
Empowering Rural Women	17/06/2012	19:30:00 AM	P3-1 (Riocentro)	Why do rural women lag behind on the Millennium Development Goals? How can these challenges be addressed? Discuss the concrete actions that are working in the field and help identify the gaps that are needed to secure a better future for rural women	World Farmers Organisation	

Quebec's Plan Nord: Towards a New Global Model for Sustainable Develop	17/06/2012	19:30:00 AM	T-10 (Riocentro)	Plan Nord is a sustainable development initiative covering the 1.2 million square kilometer northern boreal region of Quebec ? a nearly pristine area twice the size of France. The area is home to a significant portion of the Canadian Boreal, the largest intact forest ecosystem on Earth, and the world?s largest storehouse of carbon. Through the Plan Nord, Quebec has brought together businesses, scientists, conservationists, aboriginal leaders and local communities to find the best ways to balance economic development with conservation, including protecting 50% of the north from all industrial activity, through an innovative ecological planning process. The commitments of the Plan Nord to integrate economic development with conservation biology and sustainable development on a landscape scale, in a manner that respects the culture and rights of aboriginal people, have the potential to form the basis for a new global model for sustainable development.	Pew Environment Group	
GREEN ECONOMY	17/06/2012	19:30:00 AM	P3-2 (Riocentro)	The debate on the Green Economy leads to an objective discussion of relevant aspects of present development pathways. The thinking on this concept aims to look at its relevance as an instrument to the transition of socio-technical systems and the transformation of consumption and production patterns. This should provide, at the same time, environment protection and ecosystem services valuation, inequalities reduction and social inclusion, together with the redesign and stimulation of the international economy in a context of structural crisis.	Centro de Gestao e Estudos Estrategicos ? Brazil (CGEE)	
Achieving a sustainable future in Rio: what can do a "Blue Economy"?	17/06/2012	19:30:00 AM	T-3 (Riocentro)	The event is an open discussion on the role the Commonwealth Environment Task Force Meeting plays in the UNEP?s Governing Council and to push for a ??Blue Economy and Ocean Governance?? as possible outcome for Rio+20. Speakers and participants will explore together the role young people from the intergovernmental organization plays to ensure the survival of their nations and especially the small islands states which face sea-level raise in case of melting glaciers and ice caps. The discussion will also showcase best practices from youth of these nations working together to make the Green Economy a reality in order to support the idea of a possible ??Blue Economy?? for the Commonwealth nations. The event will then serve as an avenue for the official launching of a practical toolkit developed by the Commonwealth Youth Climate and Sustainable Development Network which was created by the Commonwealth Secretariat and involves several youth NGOs. The Urban Summit	18/06/2012	9:00:00	Forte de Copacabana.	This event is organised by UCLG and UN-Habitat with the support of Cities Alliance and UNACLA under the auspices of the City of Rio. It will bring together over 250 Local and Regional Governments representatives to discuss their contributions to the Conference. This event is structured around dedicated roundtables with the objective of developing or strengthening collaborative ways to implement the recommendations made in view of Rio+20 and its aftermath.	ONU UN-Habitat, UCLG and the City of Rio.	
I'm a City Changer Campaign / Evolua Com Mobilidade	18/06/2012	9:00:00	Forte de Copacabana.	Launch of the awareness campaign I'm a City Changer in Rio de Janeiro. I'm a City Changer is the UN-Habitat Campaign to raise awareness on positive actions that have demonstrated impacts on people's lives in urban areas and improve the livability of cities. I'm a City Changer shall serve as a conduit to sensitize on fundamental issues and campaigning on our urban future, our cities, each and everyone's city. In the City of Rio, the campaign will be launched on the June 18th under the theme of Sustainable Transport "Evolua com mobilidade". Press is invited.	ONU UN-Habitat	
XXXII Semana da Química na Rio+20	18/06/2012	9:00:00	IFRJ	Entre os dias 18 e 21 de junho de 2012 será realizada a Semana da Química na Rio +20. Esta será uma edição especial de nossa tradicional semana que ocorre há 32 anos e constará da programação oficial da Conferência das Nações Unidas sobre Desenvolvimento Sustentável-Rio+20. Nosso evento contará com conferencistas e palestrantes de renome nacional e internacional. A grande atração do evento é a apresentação dos Projetos Discentes. Neles, os alunos são os protagonistas: definindo seu objeto de estudo, seu orientador e desenvolvendo metodologias específicas para a investigação que pretendem realizar. O conhecimento gerado com os projetos é apresentado em salas ou laboratórios especialmente preparados para receber o público visitante. Nesta edição, o projeto vencedor será premiado com o envio de 01 professor e 02 alunos para acompanhar a VIII reunião do "Persistent Organic Pollutants Review Committee" (POPRC-8) da Convenção de Estocolmo sobre Poluentes Orgânicos Persistentes, que acontecerá na cidade de Genebra na Suíça. Teremos ainda durante o evento a VI Jornada de Iniciação Científica e Tecnológica do IFRJ	Instituto Federal de Educação, Ciência e Tecnologia do Rio de Janeiro (IFRJ)

Governance for Sustainable Development: Key Messages from the Americas	18/06/2012	9:30:00	T-6 (Riocentro)	The OAS through its Department of Sustainable Development (DSD) supports member states in designing and implementing policies, strategies, programs, and projects to integrate environmental sustainability with poverty alleviation and economic development, as well as translating sustainable development goals into concrete actions. The Department also supports countries in making fundamental decisions which engage all stakeholders, and encourage accountability for sustainable development principles and institutions. Consistent with the roles that it played in previous global conferences on environment and development, the Department has been engaging and collaborating with stakeholders from throughout the Americas to play a pivotal role in the preparations and outcomes of Rio+20. At the side event, the OAS-DSD will present the results of this collaborative process, which has included the organization of a Dialogue Series on a variety of sustainable development themes, including governance, public participation, energy, climate change, integrated water resources management, biodiversity, and risk management, among others.	Organization of American States	

Innovative field actions as leverage for change	18/06/2012	9:30:00	T-5 (Riocentro)	Field practitioners involved in local initiatives play an important role in the transition towards sustainable and inclusive development. Technical, social, managerial, and financial innovations are designed and implemented all around the world by local actors. Due to the lack of a means of systematically documenting these initiatives, comparable to peer-reviewed publications in the scientific community, these innovative field actions are not sufficiently reported and shared and, very often, get lost. FACTS Initiative and its partners propose a method and tools for documenting innovative initiatives undertaken by field practitioners (NGOs, governmental organizations, etc.). Together, they propose to promote it at Rio+20. This will also be an opportunity to launch collaborations with partners from all the countries involved in what could be a great project, whose aim is to establish an available ?Global Database of practices for sustainable and inclusive developments".	Institut Veolia Environnement	
ISO International Standards and Green Economy	18/06/2012	9:30:00	T-10 (Riocentro)	Objective of the side event : to promote wide dialogue about the importance of the ISO international standards as a contribution to the green economy in the sustainable development context. This side event will provide the attendance with examples on how an international, consensus-based, multi-stakeholder standards-setting system can achieve global agreement on the pragmatic implementation of green economy issues at the organizational level. As a concrete example, ISO has developed an international standard that provides guidance on Social Responsibility ? ISO 26000 in 2010. It involved more than 450 participating experts, from 99 countries, and 42 organizations in liaison. These experts came from six specifically identified stakeholder categories of: government, industry, labour, consumers, NGO`s and academia. Its main topics are organizational governance, human rights, labour practices, the environment, fair operating practices, consumer issues, and community involvement and development.	International Organization for Standardization (ISO)	
Message from Asian NGO Network on ESD (ANNE): Role of NGOs in Empowering the Local Community for Sustainable Development	18/06/2012	9:30:00	T-4 (Riocentro)	Asia will be the key global driving force economically in the 21st Century and its way of development will give significant impacts globally. The solution against unsustainable patterns at the grass root level is essential and should be an integral part of sustainable development both in Asia and the world. This side event aims to highlight Education for Sustainable Development (ESD), particularly, (i) the significance of achieving sustainable development in the local communities, (ii) importance of local community empowerment in achieving local sustainability, and (iii) key role of NGO)s in local community empowerment and the new knowledge creation for local sustainability. We will present Asia¡¦s ESD good practices and experiences by NGOs, leading to an Asia NGO Network on ESD to be established by 2014, the final year of UN Decade of Education for Sustainable Development.	Japan Council on the UN Decade of Education for Sustainable Development (ESD-J)	
Communitarian forest management to assure Sustainable Development	18/06/2012	9:30:00	T-9 (Riocentro)	Communitarian forest management (CFM) is a common practice in several countries of Latin America. Sustainable communitarian forest management helps to mitigate the effects of environmental degradation and climate change and promotes rural development by the creation of more employment opportunities in the forest sector, which strengthens the local economies and eradicates rural poverty. Thus, the communitarian forest management provides multiple ecologic, economic and social benefits, and can inspire other nations to learn from the experiences in Mexico and Central America to adopt similar strategies to promote sustainable development. Our side event will show what is crucial for successful and sustainable communitarian forest management, how it fosters local governance and how it improves local development. At the same time, challenges and needs will be presented to foster communitarian forest management that benefits nature and society in the local and global context.	Consejo Civil Mexicano para la Silvicultura Sostenible (CCMSS)	
Aligned Awareness and Action for the Future We Want	18/06/2012	9:30:00	T-8 (Riocentro)	Rio+20 is an opportunity to redress the breakdown of virtually every system in our interconnected world. There is a collective understanding among major groups and governments, that the need for action is critical. Yet, creating systems and frameworks that enable long-term sustainable living, directly addressing poverty and wellbeing, do not happen only through policies. There are many avenues through which change occurs, yet the foundation of all of them is our awareness; our awareness directly determines our actions and behaviors. In the past, our limited awareness has created actions of exploitation leading to over-consumption, widespread famine and ecological demise. Creating a new awareness that assigns deep value to the self, our global family, and the natural world can facilitate true change. Our panel of experts will speak on different topics considering awareness, so we may understand how to voluntarily, wisely and transparently commit, to realize the future we want.	Brahma Kumaris World Spiritual University	

Fair Ideas: Sharing solutions for a sustainable planet	18/06/2012	9:30:00	P3-A (Riocentro)	The world has changed dramatically since 1992. Economic power has shifted, corporate influence has grown and political will has faded. There is a real need to take stock of what we have learnt and to examine how this can be most usefully applied to new contexts. IIED and PUC-Rio will bring the results from a 2-day conference just before the Summit, and the diverse set of partners involved in organising this event (see www.fairideas.org for more information). We will highlight major opportunities to learn from existing practice and to shift to new patterns of behaviour. These will focus on two main UNCSD issues: ways to ensure SD Goals are grounded in specific experience and work at national and local levels; and ways in which a 'green economy' approach makes sense for low income countries and people.	International Institute for Environment and Development (IIED)	
Food, sustainability and global democracy: challenges and perspectives	18/06/2012	9:30:00	T-3 (Riocentro)	According to the last report by FAO, more than 900 million people in the world suffer from chronicle hunger. As a result of the rise in prices of basic commodities, these numbers are expected to dramatically increase. Furthermore, even if the first MDG would be achieved, 600 million people would still suffer from hunger. Linked to the financial, economical, energy and environmental crisis, speculation in the commodity markets ?particularly in the food one- is becoming a common trend; something that needs to be solved urgently. This situation of world structural hunger underlines the urgent need to rethink the policies, values and governance about food related issues.	World Forum of Civil Society Forum - UBUNTU	
Mountain knowledge solutions for sustainable green economy and improved water, food, energy, and environment nexus	18/06/2012	9:30:00	T-2 (Riocentro)	Sustainability at every level, from an individual household to the global community, depends on secure supplies of, and equitable access to, water, food, energy and biodiversity. Mountains play a vital role in this nexus, particularly in the provision of water and biodiversity services. Mountain ecosystems are much more significant today than they were in 1992 due to the emerging climate and global changes and challenges. The Rio+20 outcome document needs to recognize this new reality and take concrete actions since Mountains offer solutions both to kick-start a sustainable and equitable Green Economy and demonstrate inclusive development models that have reduced poverty and promoted social and gender equity in both upstream and downstream contexts. This side event will highlight and share local, national and regional knowledge-based solutions that are integrative, inclusive and supportive to the water, food and energy nexus and have promoted green growth strategies and reduced poverty.	International Centre for Integrated Mountain Development (ICIMOD)	
Building a Global Registry: Global GHG reporting and standards	18/06/2012	9:30:00	P3-B (Riocentro)	The Global Registry Alliance (GRA) is a consortium of programs worldwide actively supporting efforts to measure and manage greenhouse gas emissions. GRA?s mission is to improve human and institutional capacity to address climate change through the use of credible, transparent standards for carbon measurement and management. Three GHG Programs ? TCR, ECR and GVces ? are working with over 500 organizations to measure, report, verify and reduce greenhouse gas emissions. Reporting organizations include corporations, government agencies, universities and more, representing more than 30 sectors worldwide. Each program builds on the framework of the GHG Protocol, and uses similar tools such as online reporting software, a detailed reporting protocol, verification protocols, and trainings to collect data from companies, local governments, universities and more. Using these tools, reporters measure their carbon footprint in a transparent, accurate and standardized way, and then track their emissions over time as they manage their GHG performance.	Innovation Center for Energy and Transportation (iCET)	

Achieving Sustainable Development through Solidarity Economy	18/06/2012	9:30:00	P3-3 (Riocentro)	Caritas Internationalis - a worldwide confederation of 164 supportive Catholic organizations - promotes human integral development, taking into account the various aspects of human well-being: economic, social, political, cultural, ecological and spiritual, with a view to achieving a fair and caring society. This approach is supported through the promotion and fulfilment of human rights, including the right to development, with a preferential option for the poor and the excluded. Following the call of Pope Benedict for ?an inner attitude of responsibility, able to inspire a different lifestyle, with the necessary modest behavior and consumption, in order: to promote the good of future generations in sustainable terms; the safeguard of the goods of creation; the distribution of resources and?the concrete commitment to the development of entire peoples and nations" (World Food Day 2011), Caritas intends to promote a more just way to achieve sustainable development through an economic model based on solidarity. Caritas Internationalis - a worldwide confederation of 164 supportive Catholic organizations - promotes human integral development, taking into account the various aspects of human well-being: economic, social, political, cultural, ecological and spiritual, with a view to achieving a fair and caring society. This approach is supported through the promotion and fulfilment of human rights, including the right to development, with a preferential option for the poor and the	Caritas Internationalis	
The Spirituality and Ethics of Water	18/06/2012	9:30:00	P3-4 (Riocentro)	The key principle underlying the Golden Rule is the unity and interconnectedness of all things. It is one of the cornerstones for dialogue and co operation in promoting more peaceful, just and sustainable global community. The growing interfaith and ecumenical movement, especially on the grass root is hope giving when responding today´s ethical crisis. URI is a global grassroots interfaith network that cultivates peace and justice by engaging people to bridge religious and cultural differences and work together for the good of their communities. Faiths Without Borders has the project Holy Drop! that speaks for the need for spiritual literacy and ethics of water. The EWN is a network of churches and Christian organizations promoting people's access to water around the world.	United Religions Iniative (URI)	
Open Dialogue on The Future We Choose	18/06/2012	9:30:00	P3-A (Riocentro)	Based on key messages developed at the previous Nobel Laureates Symposia and the GSP report, the organising partners take the opportunity to present a declaration consisting of a science-based message on global sustainability to decision-makers, civil society and the media. This declaration highlights the importance of a science-based approach to sustainable development and the need for policy and decision-makers to acknowledge science if the world chooses a more sustainable path.	Brazil	
Governance for Sustainable Development: Key Messages from the Americas	18/06/2012	9:30:00	T-6 (Riocentro)	The OAS through its Department of Sustainable Development (DSD) supports member states in designing and implementing policies, strategies, programs, and projects to integrate environmental sustainability with poverty alleviation and economic development, as well as translating sustainable development goals into concrete actions. Linked to the financial, economical, energy and environmental crisis, speculation in the commodity markets ?particularly in the food one- is becoming a common trend; something that needs to be solved urgently. This situation of world structural hunger underlines the urgent need to rethink the policies, values and governance about food related issues.	World Forum of Civil Society Forum - UBUNTU	
Mountain knowledge solutions for sustainable green economy and improved water, food, energy, and environment nexus	18/06/2012	9:30:00	T-2 (Riocentro)	Sustainability at every level, from an individual household to the global community, depends on secure supplies of, and equitable access to, water, food, energy and biodiversity. Mountains play a vital role in this nexus, particularly in the provision of water and biodiversity services. Mountain ecosystems are much more significant today than they were in 1992 due to the emerging climate and global changes and challenges. The Rio+20 outcome document needs to recognize this new reality and take concrete actions since Mountains offer solutions both to kick-start a sustainable and equitable Green Economy and demonstrate inclusive development models that have reduced poverty and promoted social and gender equity in both upstream and downstream contexts. This side event will highlight and share local, national and regional knowledge-based solutions that are integrative, inclusive and supportive to the water, food and energy nexus and have promoted green growth strategies and reduced poverty.	International Centre for Integrated Mountain Development (ICIMOD)	
Building a Global Registry: Global GHG reporting and standards	18/06/2012	9:30:00	P3-B (Riocentro)	The Global Registry Alliance (GRA) is a consortium of programs worldwide actively supporting efforts to measure and manage greenhouse gas emissions. GRA?s mission is to improve human and institutional capacity to address climate change through the use of credible, transparent standards for carbon measurement and management. Three GHG Programs ? TCR, ECR and GVces ? are working with over 500 organizations to measure, report, verify and reduce greenhouse gas emissions. Reporting organizations include corporations, government agencies, universities and more, representing more than 30 sectors worldwide. Each program builds on the framework of the GHG Protocol, and uses similar tools such as online reporting software, a detailed reporting protocol, verification protocols, and trainings to collect data from companies, local governments, universities and more. Using these tools, reporters measure their carbon footprint in a transparent, accurate and standardized way, and then track their emissions over time as they manage their GHG performance.	Innovation Center for Energy and Transportation (iCET)	
Achieving Sustainable Development through Solidarity Economy	18/06/2012	9:30:00	P3-3 (Riocentro)	Caritas Internationalis - a worldwide confederation of 164 supportive Catholic organizations - promotes human integral development, taking into account the various aspects of human well-being: economic, social, political, cultural, ecological and spiritual, with a view to achieving a fair and caring society. This approach is supported through the promotion and fulfilment of human rights, including the right to development, with a preferential option for the poor and the excluded. Following the call of Pope Benedict for ?an inner attitude of responsibility, able to inspire a different lifestyle, with the necessary modest behavior and consumption, in order: to promote the good of future generations in sustainable terms; the safeguard of the goods of creation; the distribution of resources and?the concrete commitment to the development of entire peoples and nations" (World Food Day 2011), Caritas intends to promote a more just way to achieve sustainable development through an economic model based on solidarity. Caritas Internationalis - a worldwide confederation of 164 supportive Catholic organizations - promotes human integral development, taking into account the various aspects of human well-being: economic, social, political, cultural, ecological and spiritual, with a view to achieving a fair and caring society. The Spirituality and Ethics of Water	18/06/2012	9:30:00	P3-4 (Riocentro)	The key principle underlying the Golden Rule is the unity and interconnectedness of all things. It is one of the cornerstones for dialogue and co operation in promoting more peaceful, just and sustainable global community. The growing interfaith and ecumenical movement, especially on the grass root is hope giving when responding today´s ethical crisis. URI is a global grassroots interfaith network that cultivates peace and justice by engaging people to bridge religious and cultural differences and work together for the good of their communities. Faiths Without Borders has the project Holy Drop! that speaks for the need for spiritual literacy and ethics of water. The EWN is a network of churches and Christian organizations promoting people's access to water around the world.	United Religions Iniative (URI)	

Open Dialogue on The Future We Choose	18/06/2012	9:30:00	P3-A (Riocentro)	Based on key messages developed at the previous Nobel Laureates Symposia and the GSP report, the organising partners take the opportunity to present a declaration consisting of a science-based message on global sustainability to decision-makers, civil society and the media. This declaration highlights the importance of a science-based approach to sustainable development and the need for policy and decision-makers to acknowledge science if the world chooses a more sustainable path.	Brazil	
Governance for Sustainable Development: Key Messages from the Americas	18/06/2012	9:30:00	T-6 (Riocentro)	The OAS through its Department of Sustainable Development (DSD) supports member states in designing and implementing policies, strategies, programs, and projects to integrate environmental sustainability with poverty alleviation and economic development, as well as translating sustainable development goals into concrete actions. The Department also supports countries in making fundamental decisions which engage all stakeholders, and encourage accountability for sustainable development principles and institutions. Consistent with the roles that it played in previous global conferences on environment and development, the Department has been engaging and collaborating with stakeholders from throughout the Americas to play a pivotal role in the preparations and outcomes of Rio+20. At the side event, the OAS-DSD will present the results of this collaborative process, which has included the organization of a Dialogue Series on a variety of sustainable development themes, including governance, public participation, energy, climate change, integrated water resources management, biodiversity, and risk management, among others.	Organization of American States	
Innovative field actions as leverage for change	18/06/2012	9:30:00	T-5 (Riocentro)	Field practitioners involved in local initiatives play an important role in the transition towards sustainable and inclusive development. Technical, social, managerial, and financial innovations are designed and implemented all around the world by local actors. Due to the lack of a means of systematically documenting these initiatives, comparable to peer-reviewed publications in the scientific community, these innovative field actions are not sufficiently reported and shared and, very often, get lost. FACTS Initiative and its partners propose a method and tools for documenting innovative initiatives undertaken by field practitioners (NGOs, governmental organizations, etc.). Together, they propose to promote it at Rio+20. This will also be an opportunity to launch collaborations with partners from all the countries involved in what could be a great project, whose aim is to establish an available ?Global Database of practices for sustainable and inclusive developments".	Institut Veolia Environnement	
ISO International Standards and Green Economy	18/06/2012	9:30:00	T-10 (Riocentro)	Objective of the side event : to promote wide dialogue about the importance of the ISO international standards as a contribution to the green economy in the sustainable development context. This side event will provide the attendance with examples on how an international, consensus-based, multi-stakeholder standards-setting system can achieve global agreement on the pragmatic implementation of green economy issues at the organizational level. As a concrete example, ISO has developed an international standard that provides guidance on Social Responsibility ? ISO 26000 in 2010. It involved more than 450 participating experts, from 99 countries, and 42 organizations in liaison. These experts came from six specifically identified stakeholder categories of: government, industry, labour, consumers, NGO`s and academia. Its main topics are organizational governance, human rights, labour practices, the environment, fair operating practices, consumer issues, and community involvement and development.	International Organization for Standardization (ISO)	
Message from Asian NGO Network on ESD (ANNE): Role of NGOs in Empowering the Local Community for Sustainable Development	18/06/2012	9:30:00	T-4 (Riocentro)	Asia will be the key global driving force economically in the 21st Century and its way of development will give significant impacts globally. The solution against unsustainable patterns at the grass root level is essential and should be an integral part of sustainable development both in Asia and the world. This side event aims to highlight Education for Sustainable Development (ESD), particularly, (i) the significance of achieving sustainable development in the local communities, (ii) importance of local community empowerment in achieving local sustainability, and (iii) key role of NGO)s in local community empowerment and the new knowledge creation for local sustainability. We will present Asia¡¦s ESD good practices and experiences by NGOs, leading to an Asia NGO Network on ESD to be established by 2014, the final year of UN Decade of Education for Sustainable Development.	Japan Council on the UN Decade of Education for Sustainable Development (ESD-J)	

Communitarian forest management to assure Sustainable Development	18/06/2012	9:30:00	T-9 (Riocentro)	Communitarian forest management (CFM) is a common practice in several countries of Latin America. Sustainable communitarian forest management helps to mitigate the effects of environmental degradation and climate change and promotes rural development by the creation of more employment opportunities in the forest sector, which strengthens the local economies and eradicates rural poverty. Thus, the communitarian forest management provides multiple ecologic, economic and social benefits, and can inspire other nations to learn from the experiences in Mexico and Central America to adopt similar strategies to promote sustainable development. Our side event will show what is crucial for successful and sustainable communitarian forest management, how it fosters local governance and how it improves local development. At the same time, challenges and needs will be presented to foster communitarian forest management that benefits nature and society in the local and global context.	Consejo Civil Mexicano para la Silvicultura Sostenible (CCMSS)	
Aligned Awareness and Action for the Future We Want	18/06/2012	9:30:00	T-8 (Riocentro)	Rio+20 is an opportunity to redress the breakdown of virtually every system in our interconnected world. There is a collective understanding among major groups and governments, that the need for action is critical. Yet, creating systems and frameworks that enable long-term sustainable living, directly addressing poverty and wellbeing, do not happen only through policies. There are many avenues through which change occurs, yet the foundation of all of them is our awareness; our awareness directly determines our actions and behaviors. In the past, our limited awareness has created actions of exploitation leading to over-consumption, widespread famine and ecological demise. Creating a new awareness that assigns deep value to the self, our global family, and the natural world can facilitate true change. Our panel of experts will speak on different topics considering awareness, so we may understand how to voluntarily, wisely and transparently commit, to realize the future we want.	Brahma Kumaris World Spiritual University	
Fair Ideas: Sharing solutions for a sustainable planet	18/06/2012	9:30:00	P3-A (Riocentro)	The world has changed dramatically since 1992. Economic power has shifted, corporate influence has grown and political will has faded. There is a real need to take stock of what we have learnt and to examine how this can be most usefully applied to new contexts. IIED and PUC-Rio will bring the results from a 2-day conference just before the Summit, and the diverse set of partners involved in organising this event (see www.fairideas.org for more information). We will highlight major opportunities to learn from existing practice and to shift to new patterns of behaviour. These will focus on two main UNCSD issues: ways to ensure SD Goals are grounded in specific experience and work at national and local levels; and ways in which a 'green economy' approach makes sense for low income countries and people.	International Institute for Environment and Development (IIED)	
Food, sustainability and global democracy: challenges and perspectives	18/06/2012	9:30:00	T-3 (Riocentro)	According to the last report by FAO, more than 900 million people in the world suffer from chronicle hunger. As a result of the rise in prices of basic commodities, these numbers are expected to dramatically increase. Furthermore, even if the first MDG would be achieved, 600 million people would still suffer from hunger. Linked to the financial, economical, energy and environmental crisis, speculation in the commodity markets ?particularly in the food one- is becoming a common trend; something that needs to be solved urgently. This situation of world structural hunger underlines the urgent need to rethink the policies, values and governance about food related issues.	World Forum of Civil Society Forum - UBUNTU

Global Bioenergy Partnership Seminar	18/06/2012	11:00:00	T-5 (Riocentro)	The Global Bioenergy Partnership promotes the transition away from the unsustainable, traditional ways of deriving energy from biomass and towards the sustainable production and use of modern bioenergy. The traditional use of biomass, such as burning fuelwood for cooking and heating, drives environmental degradation and damages human health and welfare. Sustainable, modern bioenergy offers a means to improve energy access and to reduce negative effects on human health and the environment. Access to clean and affordable energy is a prerequisite to sustainable development. Energy produced sustainably from biomass can play a major role in achieving the goal of ?Sustainable Energy for All?. GBEP supports the transition to sustainable, modern bioenergy by fostering the sharing of best practices, encouraging the spread of relevant technologies, creating peer-to-peer learning networks, and triggering new investment. An intended benefit of these activities is to help sustainably intensify agriculture in regions where productivity is low. Driven by the goal of promoting a vibrant, sustainable bioenergy sector, the Global Bioenergy Partnership developed 24 indicators of sustainable bioenergy production and use. Evaluating these indicators will provide environmental, social and economic data, to policy-makers and other stakeholders so that they can: 1) inform the development of national bioenergy policies and programmes; 2) encourage monitoring and evaluation of the environmental, social and economic impacts of modern bioenergy production and use; and	Global Bioenergy Partnership

RIO 2012: Sustainable Development Out of the Age of Innocence	18/06/2012	11:00:00	T-10 (Riocentro)	This event will examine why transforming the various declarations, conventions and Protocols into practical policies remains unfinished business, and on how to move forward in an adverse context marked by the financial crisis and concerns about the consequences of economic globalization. The underlying premise is that neither scientific alerts nor ethical claims alone are convincing enough to induce collective action. We must outgrow the ?age of innocence? and recognize that the financial crisis and its trail of unemployment, worsening poverty and international tensions put decision-makers under harsh pressures when real choices must be made. The first roundtable will derive lessons from past experience on how scientific knowledge is received and incorporated in societies responses, and on how solidarity with future generations can be operationalized. The second roundtable will be devoted to the articulation of top-down search for reforms and bottom-up initiatives by local authorities to promote sustainable development. RIO 2012: Sustainable Development Out of the Age of Innocence	18/06/2012	11:00:00	T-10 (Riocentro)	This event will examine why transforming the various declarations, conventions and Protocols into practical policies remains unfinished business, and on how to move forward in an adverse context marked by the financial crisis and concerns about the consequences of economic globalization. The underlying premise is that neither scientific alerts nor ethical claims alone are convincing enough to induce collective action. We must outgrow the ?age of innocence? and recognize that the financial crisis and its trail of unemployment, worsening poverty and international tensions put decision-makers under harsh pressures when real choices must be made. The first roundtable will derive lessons from past experience on how scientific knowledge is received and incorporated in societies responses, and on how solidarity with future generations can be operationalized. The second roundtable will be devoted to the articulation of top-down search for reforms and bottom-up initiatives by local authorities to promote sustainable development.	Centre International de Recherche sur l'Environnement et le Développement (CIRED)	
Boosting renewable energy in Brazil	18/06/2012	11:00:00	T-2 (Riocentro)	The Green Economy (EV) is a key focus of the Rio +20, a term originally understood by the UNEP as "that which results in improvement of human welfare and social equality while reducing significant environmental risks and ecological scarcity. "As the energy security is one of the themes established by the Brazilian government to be discussed at Rio +20, it raise the question of how to ensure energy for all, consistently while ensuring compliance with the principles of a green economy? Exploring all potential to use renewable energy is one path to be followed. This side event intends to contribute on this debate showing what have being done in Brazil to promote distributed generation from renewable energy sources in projects connected to the grid. Rio+20 Global Town Hall	18/06/2012	11:30:00	Parque dos Atletas	The Rio+20 Global Town Hall is the main setting at Rio+20 to discuss ICLEI's sustainable urban future! Mayors and local government officials from around the world will address how they can best contribute to "greening" the urban economy, to protecting the global common goods and to improving global and local governance systems. Main speakers: Ban Ki Moon, Secretary General of the United Nations* Hillary Clinton, Secretary of State of the United States* Mpho Parks Tau, Mayor of Johannesburg, South Africa Sheikh Tamim bin Hamad bin Khalifa Al-Thani, Crown Prince of Qatar* Mercedes Bresso, President of EU Committee of Regions Ilmar Reepalu, Mayor of Malmö, Sweden, Chair of the ENVE Commission of the EU Committee of the Regions Peter Altmaier, Minister for Environment, Nature Conservation and Nuclear Safety, Germany* Asim Güzelbey, Mayor of Gaziantep, Turkey Villy Søvndal, Minister for Foreign Affairs, Denmark* David Cadman, ICLEI President Maurice Strong, Secretary General of the 1992 Rio Earth Summit* Dilma Roussed, President of Brazil* Jacob Zuma, President of South Africa* Christiana Figueres, Executive Secretary of UNFCCC Jean-Marc Ayrault, Prime Minister of France* *To be confirmed	ICLEI-Local Governments for Sustainability	Ban Ki Moon; Hillary Clinton; Mpho Parks Tau; Sheikh Tamim bin Hamad bin Khalifa Al-Than; Ilmar Reepalu; Peter Altmaier; Asim Güzelbey; David Cadman; Dilma Rousseff; Jacob Zuma; Christiana Figueres; Jean-Marc Ayrault
Review of China's Sustainable Development 1992 - 2011: A perspective from Chinese civil society	18/06/2012	11:30:00	T-6 (Riocentro)	Twenty years ago, not a single NGO representative from China participated in the 1992 Rio Summit. In fact, there were no environmental NGO in China at that time. However, in recent years, the environmental NGO community has developed rapidly in China to become one of the most vibrant and vocal civil society sectors in promoting sustainable development. It has also played important roles in enabling and facilitating public participation in sustainability issues, as well as catalyzing cross-sector cooperation among youth, corporations, foundations, research institutes and media. This side event, as part of the ?China Going Green? Dialogues and based on the findings of the collaborative report by Chinese NGOs reviewing sustainable development over the past 20 years, will address the current state of public participation in sustainable development, the roles and challenges of NGOs, and the future of green citizenship in China	China Association for NGO Cooperation	

The Impact of New Technologies and ICTs on Sustainable Development	18/06/2012	11:30:00	T-9 (Riocentro)	The intersection of Information and Communication Technology (ICT), with the challenges of environmental, social and economic sustainability forms a critical nexus for the future of sustainable development and poverty eradication. Technology has long played a crucial part in economic and social development, and its evolution has continually raised the thresholds of possibility. In order to unleash the full potential of technology as an enabler for sustainable economic and social development throughout the developing world, a global strategy leveraging the power of technology is needed. The importance of sustainability has been recognized in development policy since the United Nations first Summit on that theme in the early 1990s and today it is being revived with the RIO+20 Summit that aims at securing renewed political commitment. A sustainable development approach must be holistic and analyze its three pillars: economic, social and environmental trends, and the interactions between them. The link between ICT and sustainable development recognizes the existence of both significant opportunities and threats.On the one hand, there is optimism that the ?new economy? will bring ?dematerialization?, a reduction in movement of goods, and a general decoupling of economic growth and resource use, on the other hand, there is fear that current unsustainable trends will	Global Alliance for ICT and Development GAID/OICT	
RIO Panel on Humanity & Environment = Our World's Resources	18/06/2012	11:30:00	P3-E (Riocentro)	This will be a panel discussion on the framework and foundation for a World Constitution for our environment, so humanity can live in better balance with our world?s resources.	Global Campaign for Climate Action (GCCA)	
Entrepreneurship Forum on Green Business Opportunities	18/06/2012	11:30:00	P3-F (Riocentro)	The forum aims to introduce the practice of Chinese enterprises? adoption of energy-saving and environmental-friendly technologies in the process of sustainable development so that the world may know better the unremitting efforts Chinese enterprises are making in environmental protection, ecological building and resources recycling, etc. to explore an appropriate economic development path suited to Chinese national conditions The Chinese entrepreneurs wish to build a bridge with entrepreneurs of other countries and a platform for more communication through the forum. Entrepreneurs of other countries are welcome to the forum and participate in the discussion, which we hope will enhance understanding, offer new ways for mutual-beneficial cooperation and make contributions to the sustainable development of the world.	United Nations Association of China	
The Sustainable and Just City	18/06/2012	11:30:00	T-4 (Riocentro)	Now that over half of the world?s population lives in cities, sustainable urbanization is an important new opportunity for the UN?s efforts to advance sustainable development and poverty reduction. This side event will offer a vision for sustainable and just cities and showcase what leaders and practitioners have learned in the implementation of promising initiatives. Speakers will discuss the crucial leadership of mayors and who are scaling up successful strategies in partnership with the world?s heads of state, environmental ministers, civil society organizations, and business leaders. The Ford Foundation will discuss the role of philanthropic institutions in generating greater resources and attention to the challenges of accommodating the 2 billion additional residents that are expected to reside in the world's cities by 2050. Attendees will be invited to share their ideas about to strengthen collaboration between practitioners, leaders, and key stakeholders to achieve a vision of sustainable and just cities.	Ford Foundation	
Implications of the triple disaster in Japan in a post-Rio+20 world	18/06/2012	11:30:00	P3-B (Riocentro)	Addressing one of the seven critical issues identified by UNDESA for Rio+20, the purpose of this side event is to reflect on the triple disasters in Japan in 2011 and draw lessons for governance and policy from the international to the local level for developing resilience to hazards in the context of sustainable development in a post-Rio+20 world. Considering that the discussion will focus on contemporary and forward-looking issues, the outcomes should directly inform the ongoing process for developing Sustainable Development Goals, as disaster risk reduction and resilience has been proposed as one potential goal.	Institute for Global Environmental Strategies	

Advancing Sustainability through Communication and Collaboration	18/06/2012	11:30:00	P3-6 (Riocentro)	This session will provide training in communication and strategic collaboration for policy makers, practitioners, and scientists working to advance sustainability. Leaders who know how to locate, talk to, and build relationships with experts can obtain current information on science and technology and feedback on policy alternatives to help design and implement effective policies. Scientists who talk with leaders and practitioners can design research relevant to societal problems and provide better links between science and policy. Communications training will help scientists to present research in a concise and accessible manner. Practitioners who know how to use both policy and science can shape more effective programs. Encouraging policy makers, practitioners, and scientists to communicate with each other and to build strategic collaborative relationships will create powerful networks working toward sustainable solutions to societal problems, and will lead to more sustainable public policies and programs at all levels of governance.	University of Colorado	
Securing Food, Water and Energy in the World's Most Valued Ecoregions	18/06/2012	11:30:00	T-3 (Riocentro)	This event will profile some of the world?s most innovative ?natural capital partnerships? implementing integrated approaches toward the transition to green growth and green economies today. It will promote a south-south knowledge exchange and commitments from Mexico, the Coastal Eastern Africa region and Asia?s Greater Mekong Subregion. Natural ecosystems provide economically valuable services vital to human welfare such as food, water, energy, and carbon sequestration. In many of the world?s ecoregions, declines in natural capital continue, causing negative impacts that contribute to increase poverty levels. Solutions are emerging, however. Across Africa, Asia-Pacific and Latin America, models for inclusive green growth are evolving through a range of integrated strategies and regional cooperation initiatives. This event will provide a forum for governments on the cutting edge of green economy innovations to profile integrated and collaborative approaches that enhance freshwater, forest, agricultural, and marine resources ? the vital building blocks of a sustainable future.	Worldwide Fund for Nature	
Promote Adaptation by Reducing Vulnerability and Increasing Resilience	18/06/2012	11:30:00	T-6 (Riocentro)	The main purpose of this workshop is to present the need to invest in public policies and in practices from smallholder farmers on adaptation in order to build resilience to face climate changes. The workshop will launch an international database of experiences and practices on adaptation from different smallholder farmers around the world, which aims to share experiences so that others can replicate or adapt these practices into their contexts. There will be also a community leader to explain how the practice empowered the community to face the climate change maintaining or improving their production and lives.	ActionAid International	
Beyond Rio+20: A Global Youth Movement for Sustainable Development	18/06/2012	11:30:00	P3-F (Riocentro)	We are at a turning point in which it is not only necessary to tackle global challenges, but also to address the disconnect between generations in order to produce new and greener ideas, attitudes, habits and a sense of responsibility and accountability linked to our daily actions. Today?s youth can and shall lead this shift by collaborating with previous generations. Current leaders and youth representatives have come together to make young people?s voice, interests, needs, actions, and visions a key part of Rio+20. Such cooperation efforts must continue after the UN summit. The event will therefore discuss future scenarios both in terms of priorities for the movement (SDGs, education?) and form (through the Major Groups or an independent alliance?). Feedback will be sought from other stakeholders, whose partnership will be fundamental in making a long-term youth movement flourish for a sustainable future.	European Students' Forum (AEGEE)	

Sustainability Revisited: Population, Reproductive Health & the Planet	18/06/2012	11:30:00	T-10 (Riocentro)	Mary Robinson and the Aspen Institute?s Global Leaders Council for Reproductive Health (GLC) will convene a high-level moderated dialogue to raise the profile of human development, gender and reproductive health within the Rio+20 UN Conference on Sustainable Development. Members of the GLC and other high-level leaders will speak to the role of human development and reproductive health in the new and emerging global discussion of sustainable development. Featured speakers will include: Gro Harlem Brundtland, Former Prime Minister of Norway; Musimbi Kanyoro, President and Chief Executive Officer of the Global Fund for Women; Tewodros Melesse, Director General of the International Planned Parenthood Federation; Mary Robinson, Former President of Ireland and President of the Mary Robinson Foundation ? Climate Justice; Tim Wirth, President of the United Nations Foundation. □	Aspen Institute	
Dublin Rio Principles, where do we stand, what lessons learned	18/06/2012	11:30:00	P3-6 (Riocentro)	In line with Dublin/Rio conferences (1992) mandates, AMCOW has provided leadership and commitment in gender mainstreaming by elaborating the AMCOW Gender Policy and Strategy in the water sector. Many governments, civil society and development agencies have also adopted gender sensitive policies and programmes suggesting that there exists considerable knowledge and lessons learnt. GWP is currently elaborating a GWP gender Strategy for the GWP Network. AMCOW, GWP; UNDP; Cap-Net; SaciWATERs, the Center for Public Health and Climate Change at the Public Health Institute and GWA plan to convene a gender implementation event at the Rio+20 conference. The event will review progress made and facilitate information exchange on strategies, actions, approaches, partnerships/networks lessons learnt and gender mainstreaming needs. This event seeks to share knowledge so as to support Africa?s implementation of the AMCOW gender strategy and to develop an Africa network that will support AMCOW and bring these issues forward beyond RIO+20. The event will therefore discuss future scenarios both in terms of priorities for the movement (SDGs, education?) and form (through the Major Groups or an independent alliance?). Feedback will be sought from other stakeholders, whose partnership will be fundamental in making a long-term youth movement flourish for a sustainable future.	European Students' Forum (AEGEE)	

Sustainability Revisited: Population, Reproductive Health & the Planet	18/06/2012	11:30:00	T-10 (Riocentro)	Mary Robinson and the Aspen Institute?s Global Leaders Council for Reproductive Health (GLC) will convene a high-level moderated dialogue to raise the profile of human development, gender and reproductive health within the Rio+20 UN Conference on Sustainable Development. Members of the GLC and other high-level leaders will speak to the role of human development and reproductive health in the new and emerging global discussion of sustainable development. Featured speakers will include: Gro Harlem Brundtland, Former Prime Minister of Norway; Musimbi Kanyoro, President and Chief Executive Officer of the Global Fund for Women; Tewodros Melesse, Director General of the International Planned Parenthood Federation; Mary Robinson, Former President of Ireland and President of the Mary Robinson Foundation ? Climate Justice; Tim Wirth, President of the United Nations Foundation. □	Aspen Institute	
Dublin Rio Principles, where do we stand, what lessons learned	18/06/2012	11:30:00	P3-6 (Riocentro)	In line with Dublin/Rio conferences (1992) mandates, AMCOW has provided leadership and commitment in gender mainstreaming by elaborating the AMCOW Gender Policy and Strategy in the water sector. Many governments, civil society and development agencies have also adopted gender sensitive policies and programmes suggesting that there exists considerable knowledge and lessons learnt. GWP is currently elaborating a GWP gender Strategy for the GWP Network. AMCOW, GWP; UNDP; Cap-Net; SaciWATERs, the Center for Public Health and Climate Change at the Public Health Institute and GWA plan to convene a gender implementation event at the Rio+20 conference. The event will review progress made and facilitate information exchange on strategies, actions, approaches, partnerships/networks lessons learnt and gender mainstreaming needs. This event seeks to share knowledge so as to support Africa?s implementation of the AMCOW gender strategy and to develop an Africa network that will support AMCOW and bring these issues forward beyond RIO+20.	Global Water Partnership (GWP)

Healthy Women, Healthy Planet: Women's Empowerment, Reproductive Health	18/06/2012	13:15:00	Arena da Barra	Room UN2	Population Action International	
Healthy Women, Healthy Planet: Women's Empowerment, Reproductive Healt	18/06/2012	13:15:00	T-2 (Riocentro)	Women are instrumental in determining a family?s ability to survive and effectively cope with the impacts of climate change. Access to reproductive health and family planning is an important part of strengthening women?s capacity as leaders in sustainable development, yet in too many places around the world women?s access to these services is limited. Reducing unintended pregnancies and giving families the tools to determine family size can improve socio-economic status of women, reduce strain on the environment, and improve conservation of resources ? all of which make significant contributions to sustainable development and resilience in the face of a changing climate.	Population Action International	
Incorporating Biodiversity into Business - cases in Brazil	18/06/2012	13:15:00	T-8 (Riocentro)	Funbio works with companies in Brazil that are implementing projects that go beyond philanthropy or social environmental corporate responsibility. These companies are considering biodiversity conservation and climate change impacts as key elements of their strategies, designing long term plans for the development of the territories where they are located or influential. These projects include the design of sustainable development plans for the territories, but also the creation and implementation of financial mechanisms to support these plans, as well as participative governance models to get local communities, government authorities and other partners involved. Three companies will present their experiences in a systematized way, allowing the audience to evaluate the convergences and specific aspects of the three cases.	Brazilian Biodiversity Fund (institution Funbio)

Promoting a Green Economy in Africa, LDCs, SIDS and LLDCS/Challenges/O	18/06/2012	13:30:00	P3-E (Riocentro)	Promotion of the green economy is one major means by which the current economy in Africa can make the transition to sustainable economic development. As has been widely acknowledged, although Africa has contributed least to global climate change, it has suffered disproportionately from its adverse effects. The challenges of adaptation and mitigation are therefore particularly urgent for Africa. The continent has 60 percent of the world?s arable land; 20 percent of its forest reserves; 20 percent of the global land mass; 40 percent of the world?s biodiversity and more than half of the world?s clean energy potential. A new paradigm is needed to ensure that countries maximize the potential benefits that the green economy could provide. A green economy with the vast untapped natural resources represent a paradigm shift in promoting clean and renewable energy, creation of employment and conservation of the continent?s natural resources.	Office of the Special Adviser on Africa (OSAA)	
Disarmament for Development	18/06/2012	13:30:00	T-4 (Riocentro)	As the economic crisis continues to give rise to government spending cuts in many countries, increased attention is being paid to military budgets. The global military expenditure in 2010 has reached a historic high of $1630 billion. This is 5 times more than what we would need to achieve the Millennium Development Goals. This side event will show the effects of armed conflicts and weapons on development and explain an innovative way to finance programmes for sustainable development: by reducing military spending.	International Peace Bureau	

LP Gas: An exceptional energy for improving health and development	18/06/2012	13:30:00	P3-A (Riocentro)	This side event will highlight an independent study regarding the impact of energy-related pollution on human health. It will demonstrate that Liquefied Petroleum Gas (LP Gas or LPG) can help to reduce negative health impacts particularly those stemming from cooking with traditional fuels and biomass while providing access to clean, modern energy that is necessary for sustainable development. LP Gas is a clean-burning, low carbon and efficient fuel and a vital source of energy for hundreds of millions of people throughout the world. It is modern and safe and can be used anywhere. It is also available immediately, without large investments in R&D, technology, time or infrastructure. It is portable and can be transported, stored and used virtually anywhere without large investments in infrastructure making it ideal for solving development issues and improving the life and health of millions of people who currently lack access to modern forms of energy.	World LP Gas Association (WLPGA)	
The Economics of Low Carbon Cities	18/06/2012	13:30:00	T-9 (Riocentro)	Cities currently spend around 10% of their GDP on their annual energy bill. How can this be reduced whilst also enhancing competitiveness and creating employment? What are the most cost and carbon effective options? What is the business case for major investments and how much would they cut the carbon emissions of cities?	Centre for Low Carbon Futures	
Renewable Energy Use in Rural Isolated Communities	18/06/2012	13:30:00	T-3 (Riocentro)	The side event will provide an important opportunity to show-case and discuss projects and programmes being implemented to promote the use of renewable energy in rural isolated communities in Bolivia and in other developing countries of the world. The Minister of Hydrocarbons and Energy and the Vice Ministry of Electricity and Alternative Energies are tentatively expected to participate.	Bolivia (Plurinational State of)	
Fertile Soil for our Future: nourish our people - nurture our planet	18/06/2012	13:30:00	P3-E (Riocentro)	Soils are the basis for life on earth. They ensure food, water, fibre, bioenergy production for present and future generations and play a crucial role in adaptation and mitigation strategies for climate change. However, soils have been taken for granted for too long. Over the last decades they have been degraded by mismanagement, jeopardizing this essential finite natural resource and its ecosystem services. Nowadays, land degradation directly affects 1.5 billion people. They include 74% of the poor in the world, therefore soil conservation has a very direct link to poverty eradication. At this event the relevance of soils will be presented in a vivid and intuitive way. First-hand insights from Ethiopia will be provided that show to delegates and the media that fertile soils are the basis for an economically, ecologically and socially sustainable development.	Biovision ? Foundation for ecological Development	
Sustainable Agriculture and Food; First for Sustainable Development	18/06/2012	13:30:00	T-9 (Riocentro)	Last decades have seen agriculture being transformed into an industrial activity, which has created hegemony of corporate interests and benefitted big business, starving countries and communities and creating unrest. The panel discussion will talk sustainable agriculture and right to food should be the first charge on sustainable development.	Public Advocacy Initiatives for Rights and Values in India (PAIRVI)	
Space Observations in support to the Rio Conventions	18/06/2012	13:30:00	T-8 (Riocentro)	Implementing the MAEs Conventions requires the collection, analysis and understanding of a huge amount of environmental information. This information is essential for a better understanding of the scientific background around the environmental issues, but also to serve decision-making and to enable sustainable development plans to be put in place. Earth Observation satellites provide ways to improve the implementation of the MEAs, such as continuous observations of essential environmental variables, the building of long-term archives of historical satellite data, and the provision of synoptic and comparable environmental information without infringing on national sovereignties. The Side Event will be organised along some keynote speeches and round table discussions on how Space Observations improve the assessment and the monitoring of essential ?climate change?, ?biodiversity? and ? land degradation? variables. Such an event would allow to increase awareness and share views on the importance of satellite observations for the implementation of the Rio Conventions.	European Space Agency	
Energy for all; Equity as fundamental goal	18/06/2012	13:30:00	P3-B (Riocentro)	The political economy of energy aided by international finance, trade and aid has been the principal reasons for unsustainable development. The panel will discuss how equity in energy is of paramount importance for the cherished goal of energy for all and for sustainable development. The panel will argue that equity in access to energy at international and sub national levels through fundamental changes in the patterns of production and consumption should be the first goal for sustainable development.	Ambedkar Education Society-All India Foundation of Human Rights and Social Justice	

Panel sobre la Experiencia de Recuperacion y Conservacion de la Cobertura Boscosa en Centro América y Republica Dominicana: Caso de la Republica Dominicana	18/06/2012	13:30:00	P3-F (Riocentro)	El Panel sobre la Experiencia de Recuperación y Conservación de la Cobertura Boscosa en Centro América y Republica Dominicana: Caso de la Republica Dominicana. Será un espacio para presentar los resultados y lecciones aprendidas de la ejecución de las políticas de los países participantes, con atención en la experiencia de la Republica Dominicana, orientada a la recuperación y conservación de la cobertura forestal utilizando varios instrumentos incluyendo el Pago por Servicios Ambientales. Consiste en un panel de expertos de alto nivel y de tomadores de decisiones de las instancias institucionales nacionales y regionales vinculadas o responsable de la gestión ambiental, tomando como base la presentación de un estudio de cobertura forestal de la Republica Dominicana y las políticas asociadas.	Ministerio de Medio Ambiente y Recursos Naturales - National Environmental Office	
Mainstreaming BioDiversity for a Sustainable Future	18/06/2012	13:30:00	T-2 (Riocentro)	The purpose of this side event is to explore the importance of mainstreaming BioDiversity to raise public understanding of BioDiversity. This session will highlight and introduce 1000 Days for the Planet, a global educational and awareness raising project launched in the context of the United Nations Decade on Biodiversity. At its heart is a three-year worldwide sailing expedition on the oceanographic vessel Sedna IV and a programme that combines science, education and public entertainment/documentary. The project will reach out to the general public through a multidimensional platform of exhibitions, educational activities, film and television productions, and online videoconferencing with the ship?s scientists. Examples of mainstreaming BioDiversity at the local level will also be presented through the Ontario Project ?The Halton Peel BioDiversity Network?, and Canadian Youth efforts to mainstream BioDiversity.	Canadian Environmental Network

Iluminação Sustentável	18/06/2012	14:00:00	Aterro do Flamengo	Sustentabilidade significa, entre muitos outros fatores, a redução na mão de obra e nos custos com manutenção dos sistemas de iluminação. Significa também a diminuição no consumo de energia elétrica ao alimentar as fontes de luz e a redução dos custos com ar condicionado (em consequência de menores níveis de calor gerados com as novas fontes de luz LED).	Palestrante: Peter Gasper	SEBRAE
Uso sustentável da água na produção têxtil – um case para cooperação	18/06/2012	14:00:00	Parque dos Atletas	O problema crescente da escassez global de água criou um novo sentido de urgência entre muitas empresas com produção em áreas com escassez de água. Nos últimos anos temos visto um aumento do interesse por parte do setor privado em desenvolver estratégias de gestão de água e calcular a escassez de água como um risco crescente para os investimentos e as atividades empresariais. Um número crescente de empresas reconhece que é importante ser proativo e desenvolver padrões de uso da água para evitar futuras perdas econômicas devido a diminuição e a poluição dos recursos hídricos e juntamente com uma legislação mais dura. Evento aberto ao público. Palestrantes: Karin Lexen (Swedish Water House) e Lisa Svensson (Swedish Parttnership for Global Responsibility).	Embaixada da Suécia	Karin Lexen e Lisa Svensson
Registro de Documentos em ação: Sustentabilidade na Moradia	18/06/2012	14:00:00	Parque dos Atletas	A primeira palestrante, Dr.ª Sônia Maria Andrade dos Santos do 6o Ofício de Registro de Títulos e Documentos sempre acreditou que o cidadão seguro é um cidadão feliz. Para colocar em prática sua filosofia de vida, nasce em 2006 o projeto Registro de Documentos em Ação, de sua autoria, em parceria com Defensoria Pública do Estado do Rio de Janeiro, que garante sem ônus ao cidadão o registro da declaração de posse para moradores de comunidades carentes, partindo do princípio de que sustentabilidade começa com documento. A palestra apontará para a importância do comprometimento com o social e convocar o espectador para ser parte da solução do problema. Evento aberto ao público. Palestrantes: Sonia Maria Andrade do Santos – Oficiala - 6o Ofício de Registro de Títulos e Documentos, Francisco Horta Filho - Defensor Público, Defensoria Pública Geral do Estado do Rio de Janeiro. □	Defensoria Pública do Estado do Rio de Janeiro	Sonia Maria Andrade do Santos, Francisco Horta Filho
Seminário SEBRAE+20	18/06/2012	14:00:00	Parque dos Atletas	O Seminário Sebrae+20 apresentará e debaterá as ações que o Sistema Sebrae e seus parceiros realizam para consolidarem a sustentabilidade como um valor dentre os empreendedores de pequeno porte, atribuindo-lhes mais capacidade competitiva ao mesmo tempo em que concorrem para uma sociedade mais justa e para o uso mais racional e eficiente dos recursos naturais. Reconhecendo ser este um imenso desafio e que apresenta múltiplas dinâmicas que estão alterando a realidade social, ambiental e econômica, numa velocidade nunca antes conhecida, o Sebrae convida três experientes instituições internacionais no tema para compartilharem suas iniciativas e debaterem os caminhos para a sustentabilidade dos pequenos negócios neste novo cenário global. São convidados a Agência Alemã de Cooperação – GIZ, a Organização Internacional do Trabalho – OIT e a Rede Internacional para as Pequenas e Médias Empresas – INSME. Evento aberto ao público. Palestrantes: Roberto Simões – Presidente do Conselho Deliberativo do Sebrae Nacional; Luiz Barreto – Diretor Presidente do Sebrae Nacional; Carlos Alberto dos Santos – Diretor Técnico do Sebrae Nacional; Carsten Schmitz-Hoffmann – GIZ (Agênica Alemã de Cooperação); Peter Poschen – OIT (Organização Internacional do Trabalho). Cidades Sustentáveis	18/06/2012	15:00:00	Parque dos Atletas	Os centros urbanos do mundo são responsáveis por quase 80% das emissões de CO2, porém só cobrem 2% da terra. A transformação tecnológica em curso aborda alguns dos maiores desafios a serem enfrentados nas cidades em rápida expansão. A Ericsson está trabalhando com várias cidades a nível global para aumentar a consciência e ajudar a realizar uma infinidade de benefícios que a TIC oferece para tratar de objetivos socioeconômicos e ambientais específicos. O Porto de Estocolmo é um exemplo. O projeto conduzido pela cidade de Estocolmo pretende ser uma cidade sustentável inigualável com um distrito de clima positivo até 2030, utilizando uma infra-estrutura eficiente para conectar 10.000 casas e 30.000 espaços de trabalho. Essas metas climáticas exigem inovação tecnológica e colaboração entre disciplinas de planejamento e desenvolvimento urbano. Evento aberto ao público.Palestrantes: Elaine Weidman-Grunewald (Ericsson) e Tomas Gustafsson (Environment and Sustainability Strategist for Large City Development Projects at City of Stockholm). Poverty Reduction and Sustainable Development: Chinese NGOs in Action	18/06/2012	15:30:00	T-11 (Riocentro)	This side event aims to show the efforts and achievements Chinese NGOs have made in the past 10 years, as well as challenges ahead in eradicating poverty and promoting sustainable development. participants will discuss how local NGOs can do better to help developing countries reach the UN Millennium Development Goals on time In accordance with the theme of the conference: A Green Economy in the Context of Sustainable Development and Poverty Eradication, our side event will focus on China?s path on poverty alleviation and sustainable development in recent 10 years. By assessing the progress to date, the remaining gaps in the implementation of the outcomes of former conferences, and discussing new and emerging challenges, this side event can make great contributions to the outcome of UNCSD/Rio+20. The side event has three thematic focuses:Chinese NGOs? efforts in poverty eradication; Relationship between poverty eradication and sustainable development; Working together to realize the UN Millennium Development Goals(MDGs).	China NGO Network for International Exchanges (CNIE)	
Analysing REDD+: challenges and choices	18/06/2012	15:30:00	T-4 (Riocentro)	Climate change is a key global challenge and national, sub-national, and local actors are responding in the political, social, and economic spheres. Forests are a key part of the international mitigation agenda. Transformational change is required to realize the forest sector's mitigation potential through avoided deforestation and forest degradation (REDD+). Dense webs of economic interests, political realities, and local needs come to the forefront as countries become "ready for REDD+" and start to develop national REDD+ strategies and policies. For the past four years, CIFOR and partners have been conducting a Global Comparative Study on REDD+ on policy development and the early stages of implementation. In this side event we will present the results of this work that are pertinent to the objectives of the CSD and the development of a green economy.	Center for International Forestry Research (CIFOR)	
Empowering Youth Leadership for a Sustainable Future	18/06/2012	15:30:00	T-10 (Riocentro)	A critical factor in the future of sustainability lies in the hands of the next generation of environmental stewards. The combination of the wisdom of the elders with the limitless creativity, enthusiasm and compassion of our youth will help us create solutions to the challenges facing our planet. It is our responsibility to educate and empower our young people to be leaders of sustainability. It is also our role to encourage their infinite resources of imagination and innovation. Social media and cultural arts are effective platforms that both give youth a voice on such global issues, and interconnect them. At this event, we will present several Rio+20 youth projects that are effectively mobilizing youth via music, spoken word and social media, as well as provide information on how our lifestyles can be improved to function with an awareness of sustainability.	Academy for Future Science	
Gender, Water and Preparing for Climate Change: Implications for Food, Health and Human Rights	18/06/2012	15:30:00	P3-A (Riocentro)	This panel aims to bring together information stemming from analyses of grass roots field experience and global processes in order to better understand the effects of climate change on women?s livelihoods, and the potential policy and programmatic approaches that may be taken to deal with them. Framed in a human rights perspective, major issues will include the impact of recent changes on the right to food, water, seeds and land.	International Women's Anthropology Conference (IWAC)	
Legal Preparedness for the Green Economy	18/06/2012	15:30:00	T-6 (Riocentro)	This IDLO Legal Roundtable Dialogue on Legal Preparedness for the Green Economy, organized in partnership with other inter-governmental organizations and leading developing countries, will highlight the importance of an enabling legal environment , tailored legal instruments and rights-based approaches to access the benefits of the global green economy. With distinguished legal experts, a dynamic discussion will examine how regulatory reforms are assisting countries to overcome barriers and establish new incentives for sustainable development and poverty eradication. Developing country jurists will share experiences with tailored legal reforms, institutions and compliance. Cutting-edge legal knowledge will be disseminated through the global launch of a new Compendium of Legal Best Practices on the Green Economy and an E-learning Course on Legal Preparedness for the Green Economy in several languages. This Legal Roundtable showcases the latest innovations in green economy laws, focusing on facilitating South-South knowledge sharing and defining practical green economy strategies.	International Law on Sustainable Development Partnership (IDLO)	

Role of EESD in Transition to a Green Economy - from Tbilisi to Rio+20	18/06/2012	15:30:00	P3-6 (Riocentro)	To address the challenges to sustainability and development the global community has undertaken a number of very important steps towards engaging education in its efforts for a healthier ecological, economic and social environment, the time span emerging from Tbilisi Declaration of 1977 and covering Decade for Education for Sustainable Development 2005-2014. Rio + 20 and its outcomes should further enhance and refine global efforts in this regards. Education should continue to be employed to provide common awareness towards current and emerging challenges to sustainable development and ways for their mitigation and solution as well as knowledge, values and skills for green economies and societies. The side event will be a multi-stakeholder forum involving international organizations, government and major group representatives as well as NGOs and private sector that will be held between 13th -18th June and discuss current and future perspective of education for sustainable development and greener societies.	Georgia	
Peasants Reclaiming our Future with Food Sovereignty and Agroecology	18/06/2012	15:30:00	T-2 (Riocentro)	In the discussions leading up to Rio+20, there has been little debate on what is a sustainable development path which can address our contemporary issues as defined under Agenda 21.	LA VIA CAMPESINA - International Peasant Movement	
The DESERTEC Concept - Energy Security, Sustainability and Development	18/06/2012	15:30:00	P3-B (Riocentro)	Mankind is facing enormous challenges: as the planet?s population rises and the industrialization of developing countries accelerates, global energy demand continues to climb. At the same time, an increase in carbon emissions brings the threat of runaway climate change and a drastic reduction in the earth?s capacity to support human life even closer. The DESERTEC Concept offers a solution to these challenges by integrating all renewable energies, generating sustainable power from those sites where at their most abundant. Realized sustainably it may provide climate protection, global energy security and further options for human development. To reach a broader audience the DESERTEC concept should be offered, presented and discussed with the global community of stakeholders of each part of society. The dialogue about which contribution the concept may provide to the aforementioned challenges and which opportunities it offers for the different regions of the world should be led.	DESERTEC Foundation	
Inadequate Planning: Challenges on the Andean Amazon	18/06/2012	15:30:00	T-11 (Riocentro)	SPDA and ICAA in their efforts to contribute to the discussion on the future of the Andean Amazon, have produced three reports on the Ecuadorian, Peru and Colombia Amazon, which provide information never before collected on investments of productive sectors (mining, energy, infrastructure, etc.) and their cumulative impacts on natural resources, conservation and development of the Amazonian populations. This information is useful for civil society and states and contributes on the decision making process. It also generate ?political capital? based on quality information, synergies with the media, politicians and civil society organizations. Therefore, we propose a dialogue event as part of Rio +20, to generate this global political capital, which should not only occur in areas of the Amazon, but also in areas where strategic decisions are being taking and affect the development of our countries.	Peruvian Society for Environmental Law - (Sociedad Peruana de Derecho Ambiental - SPDA)	
Food and the City	18/06/2012	15:30:00	P3-E (Riocentro)	Shortly after the world urban population surpassed the world rural population and the food price crisis of 2007-8, the UN Commission on Sustainable Development (CSD17) called for ?strong rural-urban linkages and partnerships between countryside and communities, to enhance livelihoods and food security?. Food Security and Cities are both priority theme areas of the green economy in the context of sustainable development and poverty eradication.	World Society for the Protection of Animals (WSPA)	
Consumer Voices at Rio+20	18/06/2012	15:30:00	T-5 (Riocentro)	The purpose of this event is to present the Consumers? Platform for Rio+20 created and signed by a number of consumer organizations around the world. The goal is to use the platform as a reference to share perspectives on a new model of consumption based on sustainability as well as proposing new forms to orient and educate consumers on sustainable development. We will also be presenting a case study of a campaign for mandatory green labeling for cars, debating the most effective ways to implement that enforce consumer?s right to know where their products are ?green? or not.	Idec - Brazilian Institute for Consumer Defense	

Spurring Private Sector Investment in Energy Efficient Buildings	18/06/2012	15:30:00	P3-A (Riocentro)	A green economy is one that will boost private sector markets and drive economic activity while minimizing impacts on natural resources and scarce energy supplies. Improving the efficiency of the building sector offers a least-cost greenhouse gas abatement opportunity with high returns on investment; powerful socioeconomic co-benefits; and potential for urban renewal and sustainability. Yet, developing policy pathways that will unlock the benefits of efficient buildings at scale remains a challenge for governments all over the world. This event will mark the release of a new study by the Johnson Controls Institute for Building Efficiency that will assist decision-makers and development institutions prioritize policy instruments. Based on polling a wide sample of the building industry, the results indicate that some policies are more effective than others in attracting private sector investment and contributing to a long-term market for energy efficient products and services.	U.S. Green Building Council	
Phasing-out fossil fuel subsides: what is at stake and why now?	18/06/2012	15:30:00	P3-F (Riocentro)	More than $500 billion is provided per year in fossil fuel subsidies. Fossil fuel subsidies drain public resources, drive global warming, and make it harder for clean energy to compete. In fact, fossil fuel subsidies are 500% larger than the subsidies provided for clean energy. While a total of 53 countries have made specific commitments to phase-out their fossil fuel subsidies, little progress has been made in following through by enacting changes to the laws and policies in the key countries. A panel of experts on fossil fuel subsidies will outline how much money is provided for these subsidies, where key countries stand in terms of phasing-out their subsidies, and what is needed to turn this promise into reality.	Natural Resources Defense Council (NRDC)	
Indigenous peoples: food security, climate changes and sustainability	18/06/2012	15:30:00	T-4 (Riocentro)	Climate changes affecting our planet require an insight into the development and sustainability. The proposal has the support of researchers at the University, and also with the indigenous leaders of the Intertribal Committee, through a round table debate issues related to Climate Change, Food Security and Insecurity and the Carbon Market, enabling and opening the dialogue between research University, the knowledge of the Indians and the Society.	State University of Campinas	
Expanding Energy Access to Achieve Sustainable Energy For All	18/06/2012	15:30:00	T-6 (Riocentro)	Access to sustainable energy is a necessary precondition to achieving many social goals: eradicating poverty, increasing food production, providing clean water, improving public health, enhancing education, creating economic opportunity, empowering women, and combating climate change. In short, development is not possible without energy, and sustainable development is not possible without sustainable energy. This panel will showcase how a collaborative worldwide effort, under the auspices of Sustainable Energy for All, can accelerate progress in achieving universal energy access by 2030.	United Nations Foundation (UNF)	
THE RAINFOREST STANDARD: Integrating Social, Environmental, and Econom	18/06/2012	15:30:00	T-5 (Riocentro)	THE RAINFOREST STANDARD (RFS) Founding Members will host a side event in Rio + 20 meeting to present the RFS. The RFS integrates protocols for carbon accounting, socio-cultural-economic impact, and biodiversity outcomes in the belief that reducing carbon emissions from removals of biomass in forestland will not be effective or permanent without benefits flowing to all local stakeholders, and should produce an economic benefit that results in the protection of biodiversity and healthy ecosystems. Food and the City	18/06/2012	15:30:00	P3-E (Riocentro)	Shortly after the world urban population surpassed the world rural population and the food price crisis of 2007-8, the UN Commission on Sustainable Development (CSD17) called for ?strong rural-urban linkages and partnerships between countryside and communities, to enhance livelihoods and food security?. Food Security and Cities are both priority theme areas of the green economy in the context of sustainable development and poverty eradication.	World Society for the Protection of Animals (WSPA)	
Consumer Voices at Rio+20	18/06/2012	15:30:00	T-5 (Riocentro)	The purpose of this event is to present the Consumers? Platform for Rio+20 created and signed by a number of consumer organizations around the world. The goal is to use the platform as a reference to share perspectives on a new model of consumption based on sustainability as well as proposing new forms to orient and educate consumers on sustainable development. We will also be presenting a case study of a campaign for mandatory green labeling for cars, debating the most effective ways to implement that enforce consumer?s right to know where their products are ?green? or not.	Idec - Brazilian Institute for Consumer Defense	
Spurring Private Sector Investment in Energy Efficient Buildings	18/06/2012	15:30:00	P3-A (Riocentro)	A green economy is one that will boost private sector markets and drive economic activity while minimizing impacts on natural resources and scarce energy supplies. Improving the efficiency of the building sector offers a least-cost greenhouse gas abatement opportunity with high returns on investment; powerful socioeconomic co-benefits; and potential for urban renewal and sustainability. Yet, developing policy pathways that will unlock the benefits of efficient buildings at scale remains a challenge for governments all over the world. This event will mark the release of a new study by the Johnson Controls Institute for Building Efficiency that will assist decision-makers and development institutions prioritize policy instruments. Based on polling a wide sample of the building industry, the results indicate that some policies are more effective than others in attracting private sector investment and contributing to a long-term market for energy efficient products and services.	U.S. Green Building Council	
Phasing-out fossil fuel subsides: what is at stake and why now?	18/06/2012	15:30:00	P3-F (Riocentro)	More than $500 billion is provided per year in fossil fuel subsidies. Fossil fuel subsidies drain public resources, drive global warming, and make it harder for clean energy to compete. In fact, fossil fuel subsidies are 500% larger than the subsidies provided for clean energy. While a total of 53 countries have made specific commitments to phase-out their fossil fuel subsidies, little progress has been made in following through by enacting changes to the laws and policies in the key countries. A panel of experts on fossil fuel subsidies will outline how much money is provided for these subsidies, where key countries stand in terms of phasing-out their subsidies, and what is needed to turn this promise into reality.	Natural Resources Defense Council (NRDC)	

Indigenous peoples: food security, climate changes and sustainability	18/06/2012	15:30:00	T-4 (Riocentro)	Climate changes affecting our planet require an insight into the development and sustainability. The proposal has the support of researchers at the University, and also with the indigenous leaders of the Intertribal Committee, through a round table debate issues related to Climate Change, Food Security and Insecurity and the Carbon Market, enabling and opening the dialogue between research University, the knowledge of the Indians and the Society.	State University of Campinas	
Expanding Energy Access to Achieve Sustainable Energy For All	18/06/2012	15:30:00	T-6 (Riocentro)	Access to sustainable energy is a necessary precondition to achieving many social goals: eradicating poverty, increasing food production, providing clean water, improving public health, enhancing education, creating economic opportunity, empowering women, and combating climate change. In short, development is not possible without energy, and sustainable development is not possible without sustainable energy. This panel will showcase how a collaborative worldwide effort, under the auspices of Sustainable Energy for All, can accelerate progress in achieving universal energy access by 2030.	United Nations Foundation (UNF)	
THE RAINFOREST STANDARD: Integrating Social, Environmental, and Econom	18/06/2012	15:30:00	T-5 (Riocentro)	THE RAINFOREST STANDARD (RFS) Founding Members will host a side event in Rio + 20 meeting to present the RFS. The RFS integrates protocols for carbon accounting, socio-cultural-economic impact, and biodiversity outcomes in the belief that reducing carbon emissions from removals of biomass in forestland will not be effective or permanent without benefits flowing to all local stakeholders, and should produce an economic benefit that results in the protection of biodiversity and healthy ecosystems. In this way, the RFS is the first fully integrated forest carbon emissions reduction standard that was built specifically for REDD and built by institutions in the countries in which it is to be deployed.	Red de Fondos Ambientales de Latinoamérica y el Caribe (Redlac)	
Poverty Reduction and Sustainable Development: Chinese NGOs in Action	18/06/2012	15:30:00	T-11 (Riocentro)	This side event aims to show the efforts and achievements Chinese NGOs have made in the past 10 years, as well as challenges ahead in eradicating poverty and promoting sustainable development. participants will discuss how local NGOs can do better to help developing countries reach the UN Millennium Development Goals on time In accordance with the theme of the conference: A Green Economy in the Context of Sustainable Development and Poverty Eradication, our side event will focus on China?s path on poverty alleviation and sustainable development in recent 10 years. By assessing the progress to date, the remaining gaps in the implementation of the outcomes of former conferences, and discussing new and emerging challenges, this side event can make great contributions to the outcome of UNCSD/Rio+20. The side event has three thematic focuses:Chinese NGOs? efforts in poverty eradication; Relationship between poverty eradication and sustainable development; Working together to realize the UN Millennium Development Goals(MDGs).	China NGO Network for International Exchanges (CNIE)	
Analysing REDD+: challenges and choices	18/06/2012	15:30:00	T-4 (Riocentro)	Climate change is a key global challenge and national, sub-national, and local actors are responding in the political, social, and economic spheres. Forests are a key part of the international mitigation agenda. Transformational change is required to realize the forest sector's mitigation potential through avoided deforestation and forest degradation (REDD+). Dense webs of economic interests, political realities, and local needs come to the forefront as countries become "ready for REDD+" and start to develop national REDD+ strategies and policies. For the past four years, CIFOR and partners have been conducting a Global Comparative Study on REDD+ on policy development and the early stages of implementation. In this side event we will present the results of this work that are pertinent to the objectives of the CSD and the development of a green economy.	Center for International Forestry Research (CIFOR)	
Empowering Youth Leadership for a Sustainable Future	18/06/2012	15:30:00	T-10 (Riocentro)	A critical factor in the future of sustainability lies in the hands of the next generation of environmental stewards. The combination of the wisdom of the elders with the limitless creativity, enthusiasm and compassion of our youth will help us create solutions to the challenges facing our planet. It is our responsibility to educate and empower our young people to be leaders of sustainability. It is also our role to encourage their infinite resources of imagination and innovation. Social media and cultural arts are effective platforms that both give youth a voice on such global issues, and interconnect them. At this event, we will present several Rio+20 youth projects that are effectively mobilizing youth via music, spoken word and social media, as well as provide information on how our lifestyles can be improved to function with an awareness of sustainability.	Academy for Future Science	

Gender, Water and Preparing for Climate Change: Implications for Food, Health and Human Rights	18/06/2012	15:30:00	P3-A (Riocentro)	This panel aims to bring together information stemming from analyses of grass roots field experience and global processes in order to better understand the effects of climate change on women?s livelihoods, and the potential policy and programmatic approaches that may be taken to deal with them. Framed in a human rights perspective, major issues will include the impact of recent changes on the right to food, water, seeds and land.	International Women's Anthropology Conference (IWAC)	
Legal Preparedness for the Green Economy	18/06/2012	15:30:00	T-6 (Riocentro)	This IDLO Legal Roundtable Dialogue on Legal Preparedness for the Green Economy, organized in partnership with other inter-governmental organizations and leading developing countries, will highlight the importance of an enabling legal environment , tailored legal instruments and rights-based approaches to access the benefits of the global green economy. With distinguished legal experts, a dynamic discussion will examine how regulatory reforms are assisting countries to overcome barriers and establish new incentives for sustainable development and poverty eradication. Developing country jurists will share experiences with tailored legal reforms, institutions and compliance. Cutting-edge legal knowledge will be disseminated through the global launch of a new Compendium of Legal Best Practices on the Green Economy and an E-learning Course on Legal Preparedness for the Green Economy in several languages. This Legal Roundtable showcases the latest innovations in green economy laws, focusing on facilitating South-South knowledge sharing and defining practical green economy strategies.	International Law on Sustainable Development Partnership (IDLO)	
Role of EESD in Transition to a Green Economy - from Tbilisi to Rio+20	18/06/2012	15:30:00	P3-6 (Riocentro)	To address the challenges to sustainability and development the global community has undertaken a number of very important steps towards engaging education in its efforts for a healthier ecological, economic and social environment, the time span emerging from Tbilisi Declaration of 1977 and covering Decade for Education for Sustainable Development 2005-2014. Rio + 20 and its outcomes should further enhance and refine global efforts in this regards. Education should continue to be employed to provide common awareness towards current and emerging challenges to sustainable development and ways for their mitigation and solution as well as knowledge, values and skills for green economies and societies. The side event will be a multi-stakeholder forum involving international organizations, government and major group representatives as well as NGOs and private sector that will be held between 13th -18th June and discuss current and future perspective of education for sustainable development and greener societies.	Georgia	
Peasants Reclaiming our Future with Food Sovereignty and Agroecology	18/06/2012	15:30:00	T-2 (Riocentro)	In the discussions leading up to Rio+20, there has been little debate on what is a sustainable development path which can address our contemporary issues as defined under Agenda 21.	LA VIA CAMPESINA - International Peasant Movement	
The DESERTEC Concept - Energy Security, Sustainability and Development	18/06/2012	15:30:00	P3-B (Riocentro)	Mankind is facing enormous challenges: as the planet?s population rises and the industrialization of developing countries accelerates, global energy demand continues to climb. At the same time, an increase in carbon emissions brings the threat of runaway climate change and a drastic reduction in the earth?s capacity to support human life even closer. The DESERTEC Concept offers a solution to these challenges by integrating all renewable energies, generating sustainable power from those sites where at their most abundant. Realized sustainably it may provide climate protection, global energy security and further options for human development. To reach a broader audience the DESERTEC concept should be offered, presented and discussed with the global community of stakeholders of each part of society. The dialogue about which contribution the concept may provide to the aforementioned challenges and which opportunities it offers for the different regions of the world should be led.	DESERTEC Foundation	
Inadequate Planning: Challenges on the Andean Amazon	18/06/2012	15:30:00	T-11 (Riocentro)	SPDA and ICAA in their efforts to contribute to the discussion on the future of the Andean Amazon, have produced three reports on the Ecuadorian, Peru and Colombia Amazon, which provide information never before collected on investments of productive sectors (mining, energy, infrastructure, etc.) and their cumulative impacts on natural resources, conservation and development of the Amazonian populations. This information is useful for civil society and states and contributes on the decision making process. It also generate ?political capital? based on quality information, synergies with the media, politicians and civil society organizations. Therefore, we propose a dialogue event as part of Rio +20, to generate this global political capital, which should not only occur in areas of the Amazon, but also in areas where strategic decisions are being taking and affect the development of our countries.	Peruvian Society for Environmental Law - (Sociedad Peruana de Derecho Ambiental - SPDA)	

Food and the City	18/06/2012	15:30:00	P3-E (Riocentro)	Shortly after the world urban population surpassed the world rural population and the food price crisis of 2007-8, the UN Commission on Sustainable Development (CSD17) called for ?strong rural-urban linkages and partnerships between countryside and communities, to enhance livelihoods and food security?. Praticando a sustentabilidade através de um programa sueco para o desenvolvimento urbano	18/06/2012	16:00:00	Parque dos Atletas	A maneira como planejamos e desenvolvemos as nossas cidades têm grandes implicações para as questões energéticas e climáticas. Durante essa sessão a ênfase será colocada na troca de experiências sobre como governos locais podem promover a sustentabilidade do ponto de vista de energia através de planejamento e processos associados. Em 2003, a Agência Sueca de Energia iniciou o Programa Município Sustentável. Desde então, o programa expandiu e se desenvolveu com o objetivo de alavancar o trabalho dos governos locais suecos em direção a uma sociedade sustentável. Nas diversas redes criadas, os municípios discutem e desenvolvem com base em questões comuns e recebem o apoio do governo por parte de especialistas em áreas relevantes. Evento aberto ao público. Palestrantes: Maria Steinbach Lindgren (Swedish Energy Agency), Albin Carlén (Swedish Energy Agency), Tom Andersson Second Deputy Mayor, City of Boras) e Johanna Thorén (Environmental Analyst, City of Boras).	Embaixada da Suécia.	Maria Steinbach Lindgren , Albin Carlén, Tom Andersson e Johanna Thorén

World Agricultural Heritage Systems: towards a sustainable development	18/06/2012	17:30:00	T-3 (Riocentro)	Ten years after its initiation by FAO in 2002, during the World Summit on Sustainable Development, the GIAHS Partnership Initiative represents a sophisticated framework for the recognition, dynamic conservation and adaptive management of remarkable systems of agriculture with their associated livelihoods, ecosystems and landscapes. Defined as ?unique, remarkable traditional agricultural practices and evolving systems that demonstrate multiple goods and services to humanity and the environment?. GIAHS Initiative seek to support the present-day resilience of these traditional systems and thus provide a sustainable legacy for the benefit of future generations. The initiative has assembled an impressive list of pilot site/system designations and is actively pursuing their sustainable development. It has an innovative and integrated approach looking on the well being of small farmers. Prestigious global acknowledgment is emerging, and is reflected in the participation of Japan?s Vice Minister and India?s Prime Minister in the ceremonial designation of local GIAHS in 2012.	People's Commission on Environment and Development (PCEDI)	

RECOGNIZING AFRICA'S ECOLOGICAL FOOTPRINT AND HARNESSING NATURAL CAPIT	18/06/2012	17:30:00	P3-6 (Riocentro)	Fundamentally we all depend on nature, the ecological infrastructure of the planet that provides the flow of goods and services upon which our livelihoods and economies are built. Yet Africa¡¦s ecosystems are declining faster than ever before through the combined impact of global and local pressures. Loss of ecosystem services is compromising future food security, health and well-being and the effects are being borne disproportionately by the poor. The Ecological Footprint of all African countries increased by 240 per cent between 1961 and 2008 as a result of growing populations as well as increased per capita consumption in a minority of countries. Transitioning to a green economy would ensure that our natural capital is maintained so it can continue to provide the ecosystem services we all depend on.	Senegal	
The Business of Innovating: Bringing Low-Carbon Solutions to Market	18/06/2012	17:30:00	T-9 (Riocentro)	This 90-minute panel discussion would highlight the actions taken by the business community to promote a sustainable, low-carbon energy future through development of new low-carbon technologies, at the same time as they promote economic growth and development opportunities. The discussion would profile the effective methods used by leading companies to capture low-carbon innovation opportunities, and how those strategies take into account differences in regional markets.	Center for Climate and Energy Solutions	
Sustainable Energy, Food, Water & Oceans	18/06/2012	17:30:00	T-10 (Riocentro)	This side event will focus on four of Rio+20?s seven critical issues ? energy, food, water and oceans. It will review applications of nuclear technology to all four issues and present initial progress on integrated modelling to help devise mutually supportive policies for energy, food, water and oceans and avoid conflicting policies. Nuclear technology is used to generate low-carbon electricity; to breed improved crops and reduce post-harvest losses; to map and manage ground water; as well as to assess and monitor climate change and pollution impact on oceans. Rio+20 will consider setting goals in these and other areas that integrate the economic, social and environmental dimension of sustainable development. The interrelated nature of multiple issues suggests that an integrated approach to policymaking is needed. This side event intends to lead to a broader use of integrated modelling and mutually supportive sustainable development policies for energy, food, water and oceans.	International Atomic Energy Agency (IAEA)	
The Green Power Fund: Carbon Negative Tech for Sustainable Development	18/06/2012	17:30:00	T-9 (Riocentro)	Hosted by the Earth Institute, Columbia University, this event examines the proposal for a ?Green Power Fund? to leverage the existing $200 billion/year traded on the carbon markets to fund ?carbon negative? power plants in developing nations. The Green Power Fund was proposed by Graciela Chichilnisky, noted economist, author of the carbon market mechanism under the Kyoto Protocol, and co-founder of Global Thermostat, which has developed a technology that uses waste heat from power plants to capture more carbon than they emit. By using existing global carbon markets to finance a Green Power Fund, the international community can leverage massive amounts of private and public capital to fund carbon negative solutions in developing nations, particularly in least developed nations and small island states. This would also engage the global power sector in the sustainable development institutional framework, and spur the development of a green economy that also directly addresses climate change.	Columbia Earth Institute	
Launching the Building Block on Climate Change Financing	18/06/2012	17:30:00	P3-B (Riocentro)	This event launches ?International Partnership for Climate Finance Effectiveness (tbc)?. This partnership is composed of 25 countries and institutions to promote knowledge and experience sharing on effective management of climate finance at the country level, drawing on lessons learnt from the management of development aid.	Honduras	
Tools for Data Collection and Mapping: the Ground to the Cloud Story	18/06/2012	17:30:00	T-10 (Riocentro)	As the public demands economic accountability and sustainability, organizations need tools that help scale their work, make their data more accessible, and increase transparency around their work. The Rio+20 agenda recognizes that it is ?essential to work towards universal access to information and communications technologies.? This side event features key organizations at the forefront of the application of these technologies, working on the ground to develop means to enable citizens, businesses and governments to harness the power of the cloud. Discover free, open source or software grants for tools that allow for managing, analyzing, cartographically styling, sharing and hosting the data in the cloud infrastructure. Learn about the latest technologies that enable better governance through transparency, accessibility of information and scalability of technologies. Learn how maps can change the world. Buen Vivir and Human Rights in the Face of REDD+	18/06/2012	17:30:00	T-5 (Riocentro)	Climate change is a critical issue for indigenous peoples. While effective solutions to the climate crisis are desperately needed, many popular strategies, like REDD+, actually threaten indigenous peoples? rights and livelihoods. This event will explore two frameworks for ensuring that climate policies protect the rights of indigenous peoples. CAOI will present on Buen Vivir, the millenarian practice of indigenous peoples of living in harmony with nature, and how it can re-shape climate policies to support both sustainability and the rights and livelihoods of indigenous peoples. The Indian Law Resource Center will present on the human rights obligations of states and institutions, such as the World Bank and the UN-REDD Programme, engaged in REDD+ initiatives, and identify the minimum standards necessary for the protection of the rights of indigenous peoples impacted by REDD+ projects. The discussion will highlight shortcomings of existing climate solutions and propose distinct approaches for sustainable development.	Indian Law Resource Center	
Indigenous Peoples' and Community ConservIndigenous Peoples' and Community Conserved Territories and Areas (ICCAs): a force against destructive development and for the "buen vivir"	18/06/2012	17:30:00	T-4 (Riocentro)	This side event, organized by the ICCA Consortium, IUCN CEESP, GEF-SGP and the Equator Initiative, will provide space to discuss Indigenous Peoples' and Community Conserved Areas and Territories (ICCAs), i.e. those "natural and modified ecosystems that contain significant biodiversity values, ecological values and cultural values and are voluntarily conserved by indigenous peoples and local communities through customary laws or other effective means" (IUCN, 2004). This conservation practice, intertwined with local livelihoods and the spiritual and material values of local cultures, is the oldest on earth. Today, it remains one of the staunchest to hold the fort of bio-cultural diversity against the destructive powers of "development", extractive industries, land grabbing, large infrastructures, loss of culture and values. The incorporation of ICCAs in the Programme of Work on Protected Areas of the CBD is managing only too slowly to provide some substantial protection against the variety of destructive forces and threats affecting them. ICCAs are found everywhere in the world, span all types of ecosystems and are the oldest form of conservation (i.e., preservation, sustainable use and restoration) known on earth. As successful examples of collective decision-making about nature they closely relate to peoples' culture and identity. They conserve nature but also secure livelihoods, in unique ways for unique contexts. They embody the capacity of communities to adapt in the face of change	ICCA Consortium	
The Global Energy Assessment - the science to transform energy systems	18/06/2012	17:30:00	T-2 (Riocentro)	A revolutionary new approach to the development and delivery of energy services is essential if economic prosperity, human and social development, and environmental protection goals are to be achieved. Reducing energy deprivation, Increasng access to clean energy, decarbonising energy systems through increasing use of renewables are key goals of the United Nations Sustainable Energy for All initiative. Additionally, achievement of the many of the UN Millennium Development Goals will only be possible when global energy challenges are confronted. Following introductions and overviews by UNIDO and the UN Foundation IIASA scientists will outline their contributions to the Global Energy Assessment (GEA), the first ever fully integrated study of the global energy system. Presenters will describe a range of energy futures that offer viable, cost-effective, sustainable pathways for resolving some of the abovementioned issues. The findings, offer policy makers, at all levels, invaluable new knowledge to inform transformational changes to the global energy system with its multiple benefits.	International Institute for Applied Systems Analysis (IIASA)	
Complex Institutional Frameworks for Sustainability	18/06/2012	17:30:00	P3-E (Riocentro)	Leading scholars and practitioners from Yale, CISDL, IUFRO, RECOFTC, and WRI discuss the role of complex institutional frameworks in the global pursuit of sustainability. Complex institutional frameworks bring together multiple institutions, actors, and processes in a manner that cuts across public and private authority, national borders, and policy sectors. Speakers will discuss innovations for managing conflicts and promoting coherence within such frameworks, drawing on case studies focusing on non-state market-driven systems, public/private regimes, and legality verification schemes. Due to its economic, environmental, and social dimensions, processes, and stakeholders, the transnational governance of forestry will serve as a cross-cutting illustration of the challenges and opportunities of complex governance, emphasizing its role in sustainability, development, and human rights. This side-event will not only aim to identify best practices for managing governance complexity in sustainable development, but will also feature the launch of an innovative research agenda and partnership on these issues.	Yale School	

The economy of climate change and international negotiations	18/06/2012	17:30:00	T-6 (Riocentro)	The Planetworkshops wish to organize a side event dedicated to the question of climate change. As a matter of fact, the fight against global warming is an essential stake to preserve our environment and our ways of life. This question is part of the main sustainable developments stakes. In this prospect, we want to organize two debates, based on the works of the ?climate negotiations? Planetworkshops? Working Commission, which gathers a large spectrum of actors involved in sustainable development: government officials, leaders of NGOs and associations, business managers, experts, researchers, students, etc	The Planetworkshops	
Towards and beyond Rio+20: Delivering Sustainable Development at the Regional Level	18/06/2012	17:30:00	T-3 (Riocentro)	Visualizing commitments and identifying opportunities at regional level This side event aims to interconnect high political representatives/managers of regional organizations, agencies and other regional mechanism working in the field of sustainable development. The complex and ambitious roadmap towards Rio+20 requires not only strong political will from parties but also an inclusive process where all stakeholders are offered the possibility to interact and commit according to their respective mandate, field of expertise, interest and capacities. The Institutional Framework for Sustainable Development requires commitments and action at all levels and in this respect it is essential to analyse the contribution of regional organizations, mechanisms and IGO´s operating at regional level outside the UN system. Based on their mandate and area of expertise, this interactive round table should identify concrete opportunities and synergies for potential cooperation within their respective regions and across regions.	Regional Environmental Center for Central and Eastern Europe (REC)	
Sustainable Development: Juggling Gender Justice in the Three Pillars	18/06/2012	17:30:00	P3-F (Riocentro)	This side event is aimed at addressing developing country challenges in balancing the three dimensions of sustainable from a gender perspective. Panelists from G77 governments and international institutions will speak to a range of experiences in integrating these three dimensions into policies and programs. Discussions will also address contentious issues in the Rio+20 negotiations and provide concrete inputs toward shaping the post-MDG sustainable development framework.	Development Alternatives with Women for a New Era (DAWN)	
World Agricultural Heritage Systems: towards a sustainable development	18/06/2012	17:30:00	T-3 (Riocentro)	Ten years after its initiation by FAO in 2002, during the World Summit on Sustainable Development, the GIAHS Partnership Initiative represents a sophisticated framework for the recognition, dynamic conservation and adaptive management of remarkable systems of agriculture with their associated livelihoods, ecosystems and landscapes. Defined as ?unique, remarkable traditional agricultural practices and evolving systems that demonstrate multiple goods and services to humanity and the environment?. GIAHS Initiative seek to support the present-day resilience of these traditional systems and thus provide a sustainable legacy for the benefit of future generations. The initiative has assembled an impressive list of pilot site/system designations and is actively pursuing their sustainable development. It has an innovative and integrated approach looking on the well being of small farmers. Prestigious global acknowledgment is emerging, and is reflected in the participation of Japan?s Vice Minister and India?s Prime Minister in the ceremonial designation of local GIAHS in 2012.	People's Commission on Environment and Development (PCEDI)	
RECOGNIZING AFRICA'S ECOLOGICAL FOOTPRINT AND HARNESSING NATURAL CAPIT	18/06/2012	17:30:00	P3-6 (Riocentro)	Fundamentally we all depend on nature, the ecological infrastructure of the planet that provides the flow of goods and services upon which our livelihoods and economies are built. Yet Africa¡¦s ecosystems are declining faster than ever before through the combined impact of global and local pressures. Loss of ecosystem services is compromising future food security, health and well-being and the effects are being borne disproportionately by the poor. The Ecological Footprint of all African countries increased by 240 per cent between 1961 and 2008 as a result of growing populations as well as increased per capita consumption in a minority of countries. Transitioning to a green economy would ensure that our natural capital is maintained so it can continue to provide the ecosystem services we all depend on.	Senegal	
The Business of Innovating: Bringing Low-Carbon Solutions to Market	18/06/2012	17:30:00	T-9 (Riocentro)	This 90-minute panel discussion would highlight the actions taken by the business community to promote a sustainable, low-carbon energy future through development of new low-carbon technologies, at the same time as they promote economic growth and development opportunities. The discussion would profile the effective methods used by leading companies to capture low-carbon innovation opportunities, and how those strategies take into account differences in regional markets.	Center for Climate and Energy Solutions	

Sustainable Energy, Food, Water & Oceans	18/06/2012	17:30:00	T-10 (Riocentro)	This side event will focus on four of Rio+20?s seven critical issues ? energy, food, water and oceans. It will review applications of nuclear technology to all four issues and present initial progress on integrated modelling to help devise mutually supportive policies for energy, food, water and oceans and avoid conflicting policies. Nuclear technology is used to generate low-carbon electricity; to breed improved crops and reduce post-harvest losses; to map and manage ground water; as well as to assess and monitor climate change and pollution impact on oceans. Rio+20 will consider setting goals in these and other areas that integrate the economic, social and environmental dimension of sustainable development. The interrelated nature of multiple issues suggests that an integrated approach to policymaking is needed. This side event intends to lead to a broader use of integrated modelling and mutually supportive sustainable development policies for energy, food, water and oceans.	International Atomic Energy Agency (IAEA)	
The Green Power Fund: Carbon Negative Tech for Sustainable Development	18/06/2012	17:30:00	T-9 (Riocentro)	Hosted by the Earth Institute, Columbia University, this event examines the proposal for a ?Green Power Fund? to leverage the existing $200 billion/year traded on the carbon markets to fund ?carbon negative? power plants in developing nations. The Green Power Fund was proposed by Graciela Chichilnisky, noted economist, author of the carbon market mechanism under the Kyoto Protocol, and co-founder of Global Thermostat, which has developed a technology that uses waste heat from power plants to capture more carbon than they emit. By using existing global carbon markets to finance a Green Power Fund, the international community can leverage massive amounts of private and public capital to fund carbon negative solutions in developing nations, particularly in least developed nations and small island states. This would also engage the global power sector in the sustainable development institutional framework, and spur the development of a green economy that also directly addresses climate change.	Columbia Earth Institute	
Launching the Building Block on Climate Change Financing	18/06/2012	17:30:00	P3-B (Riocentro)	This event launches ?International Partnership for Climate Finance Effectiveness (tbc)?. This partnership is composed of 25 countries and institutions to promote knowledge and experience sharing on effective management of climate finance at the country level, drawing on lessons learnt from the management of development aid.	Honduras	
Tools for Data Collection and Mapping: the Ground to the Cloud Story	18/06/2012	17:30:00	T-10 (Riocentro)	As the public demands economic accountability and sustainability, organizations need tools that help scale their work, make their data more accessible, and increase transparency around their work. The Rio+20 agenda recognizes that it is ?essential to work towards universal access to information and communications technologies.? This side event features key organizations at the forefront of the application of these technologies, working on the ground to develop means to enable citizens, businesses and governments to harness the power of the cloud. Discover free, open source or software grants for tools that allow for managing, analyzing, cartographically styling, sharing and hosting the data in the cloud infrastructure. Learn about the latest technologies that enable better governance through transparency, accessibility of information and scalability of technologies. Learn how maps can change the world. Buen Vivir and Human Rights in the Face of REDD+	18/06/2012	17:30:00	T-5 (Riocentro)	Climate change is a critical issue for indigenous peoples. While effective solutions to the climate crisis are desperately needed, many popular strategies, like REDD+, actually threaten indigenous peoples? rights and livelihoods. This event will explore two frameworks for ensuring that climate policies protect the rights of indigenous peoples. CAOI will present on Buen Vivir, the millenarian practice of indigenous peoples of living in harmony with nature, and how it can re-shape climate policies to support both sustainability and the rights and livelihoods of indigenous peoples. The Indian Law Resource Center will present on the human rights obligations of states and institutions, such as the World Bank and the UN-REDD Programme, engaged in REDD+ initiatives, and identify the minimum standards necessary for the protection of the rights of indigenous peoples impacted by REDD+ projects. The discussion will highlight shortcomings of existing climate solutions and propose distinct approaches for sustainable development.	Indian Law Resource Center	

Indigenous Peoples' and Community ConservIndigenous Peoples' and Community Conserved Territories and Areas (ICCAs): a force against destructive development and for the "buen vivir"	18/06/2012	17:30:00	T-4 (Riocentro)	This side event, organized by the ICCA Consortium, IUCN CEESP, GEF-SGP and the Equator Initiative, will provide space to discuss Indigenous Peoples' and Community Conserved Areas and Territories (ICCAs), i.e. those "natural and modified ecosystems that contain significant biodiversity values, ecological values and cultural values and are voluntarily conserved by indigenous peoples and local communities through customary laws or other effective means" (IUCN, 2004). This conservation practice, intertwined with local livelihoods and the spiritual and material values of local cultures, is the oldest on earth. Today, it remains one of the staunchest to hold the fort of bio-cultural diversity against the destructive powers of "development", extractive industries, land grabbing, large infrastructures, loss of culture and values. The incorporation of ICCAs in the Programme of Work on Protected Areas of the CBD is managing only too slowly to provide some substantial protection against the variety of destructive forces and threats affecting them. ICCAs are found everywhere in the world, span all types of ecosystems and are the oldest form of conservation (i.e., preservation, sustainable use and restoration) known on earth. As successful examples of collective decision-making about nature they closely relate to peoples' culture and identity. They conserve nature but also secure livelihoods, in unique ways for unique contexts. They embody the capacity of communities to adapt in the face of change	ICCA Consortium	
The Global Energy Assessment - the science to transform energy systems	18/06/2012	17:30:00	T-2 (Riocentro)	A revolutionary new approach to the development and delivery of energy services is essential if economic prosperity, human and social development, and environmental protection goals are to be achieved. Reducing energy deprivation, Increasng access to clean energy, decarbonising energy systems through increasing use of renewables are key goals of the United Nations Sustainable Energy for All initiative. Additionally, achievement of the many of the UN Millennium Development Goals will only be possible when global energy challenges are confronted. Following introductions and overviews by UNIDO and the UN Foundation IIASA scientists will outline their contributions to the Global Energy Assessment (GEA), the first ever fully integrated study of the global energy system. Presenters will describe a range of energy futures that offer viable, cost-effective, sustainable pathways for resolving some of the abovementioned issues. The findings, offer policy makers, at all levels, invaluable new knowledge to inform transformational changes to the global energy system with its multiple benefits.	International Institute for Applied Systems Analysis (IIASA)

Mediterranean Forests for Development: a key for adapting policies, territories and societies to climate change in the Middle East North African region	18/06/2012	19:30:00	T-11 (Riocentro)	The side event will highlight the contribution of MENA forest ecosystems to societies in the MENA region, especially in regard to climate change. The initiatives of the forest administrations involved in the Collaborative Partnership on Mediterranean Forests (CPMF) which promote the sustainable management of forests with a view to improving the resilience of MENA territories and societies to Climate Change will be presented and discussed with participants. The side-event will comprise three parts: ? Short presentations on: o the regional cooperation between forest administrations of the MENA region promoting the sustainable management of forests ; o the role of forest ecosystems? goods and services in climate change adaptation and innovative initiatives from the forest administrations in the MENA region ; o the contribution of the MENA forest sector to the Rio+20 outcomes and recommendations. ? Round-table with representatives of the forest administrations ? Poster exhibition in the side event room	Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)	
Aiming higher, unlocking tertiary education's potential for SD	18/06/2012	19:30:00	T-10 (Riocentro)	Aiming higher, unlocking tertiary education's potential to accelerate sustainable development and the transition to a fair and green economy Tertiary education plays a critical role in shaping the future, as political, business and civil society leaders are likely to be university graduates and will prepare the skilled workforce needed for a green economy. This event will emphasise the important role tertiary education plays in realising sustainable development and the transition to a green economy. Hosted by a collaborative of tertiary education sustainability organisations, in collaboration with numerous governments, we will answer: ? How can governments, NGOs, businesses and tertiary education instigate the necessary shift towards sustainable development and the transition to a Green Economy? ? How do we unlock the potential of tertiary education sector to transform society? ? What role should tertiary education play in creating and participating in the institutional framework for sustainable development? ? What funding and support mechanisms will need to be provided to ensure the success of tertiary education in sustainable development efforts?	Australasian Campuses Towards Sustainability (ACTS)	

Green Growth? The Future They Want!	18/06/2012	19:30:00	P3-6 (Riocentro)	1. Since it was announced by President Lee Myung-Bak at a national address on the 60th anniversary of the Republic of Korea on 15 August 2008, ?Low Carbon, Green Growth? has become a new national vision to guide the Korea?s long-term sustainable development. In line with the new vision, the Korean Government announced a Five-Year Plan for Green Growth in 2009 to serve as a medium-term plan for implementing the National Strategy for Green Growth over the period 2009-2013. Recognizing the Korea?s leadership, UNEP praised South Korea?s commitment to a green economic future in its report in April 2010. However, while Korea?s Green Growth initiative could be a good benchmark for other countries coming to Rio+20 to develop their own national model towards achieving a green economy, they could also learn from the critical lessons derived from the Korea?s experience. There have been a number of criticisms among Korean civil society against the governance process of the Green Growth and its emphasis on the expansion of nuclear power and the construction industry. In this context, the Rio+20 Committee of Korean Civil Society, composed of more than twenty Korean civil society organizations in the fields of environment, sustainable energy, forest protection, human rights, gender equality, international development cooperation and etc., are	Korean Federation for Environmental Movement (KFEM)	
IFSD put into Practice: Setting up a Sustainable Development Council	18/06/2012	19:30:00	P3-A (Riocentro)	At the 2012 United Nations Conference on Sustainable Development (UNCSD), the UN institutions that deal with sustainable development are to be restructured. This offers a unique opportunity to implement long overdue reforms. The proposed reforms should follow the objective to improve the visibility and key priority of sustainable development in the UN system. An important building block towards these reforms might be the establishment of a Sustainable Development Council (SDC), replacing the politically weak UN Commission on Sustainable Development (CSD). The UNCSD outcome document should recommend that the UN General Assembly decides to adopt a resolution establishing such a council as its subsidiary organ. Moreover, the new council's mandate, membership, and institutional design need to be negotiated. The proposed side event will tackle these questions, including ideas for effective decision-making structures, enhanced participation, a peer review mechanism, innovative financing mechanisms etc.	Global Issues Division of the German Institute for International and Security Affairs (SWP)	
Students Speak Up for the Polar Regions	18/06/2012	19:30:00	P3-F (Riocentro)	Students Speak Up for the Polar Regions would draw much needed attention to the emerging challenge of sustainable development in the Polar Regions. The Polar Regions are crucial to global sustainable development, but have received very little attention in the lead-up to Rio. This event would feature speakers from the Students on Alumni Delegation to Rio (www.soidelegation.com). This delegation is comprised of youth under 24 who have visited the Polar Regions and are committed to their protection. During this event, delegates will speak about the importance of the Polar Regions in the context of sustainable development, threats facing these regions, and opportunities to promote sustainable development of the poles. This event aims to raise awareness about the unique sustainable development challenges facing the Polar Regions and to inspire national delegates and civil society organizations to commit to their protection. The event will provide concrete ways for attendees to take action.	Students on Ice Alumni Delegation	
Voices from Fukushima: Sharing Lessons for Global Sustainability	18/06/2012	19:30:00	T-5 (Riocentro)	The Great East Japan Earthquake and Tsunami, and the accident at the Fukushima Daiichi nuclear power plant that occurred on March 11, 2011 have had dramatic impact around the world. More than a year has passed since this massive disaster, but the nuclear power plant remains unstable. Workers continue to work in life-threatening conditions, while many people including children are forced to suffer from prolonged radiation exposure, unable to evacuate due to lack of support from the government. Despite such severe situations, the government of Japan has been eagerly trying to restart other nuclear plants within the country that have been stopped for regular checks. This event aims to deliver the direct voices of the people of Fukushima, providing the participants with opportunities to not only learn the reality of what is currently happening in Japan, but also to think of what it takes to build a sustainable future.		

Low Carbon Strategies;Challenge or Opportunity for Developing Countrie	18/06/2012	19:30:00	P3-E (Riocentro)	"Brot für die Welt" ("Bread for the World") is part of the Social Service Agency of the Protestant Church in Germany and active on their behalf in the field of development cooperation. ?Brot für die Welt? supports the poor in Africa, Asia, Latin America and Eastern Europe in their attempts to lead a dignified life. We work jointly with local churches and partner organisations on over 1,000 projects in the main areas of food security, education and health, the struggle against HIV/Aids and the promotion of a culture of peace. ?Brot für die Welt? regards itself as the advocate of disadvantaged people in the countries of the Southern hemisphere and as such promotes global transformation as an indispensable means to achieve justice for the poor.	Social Service Agency of the Protestant Church	
Sustainable Development and Indigenous Peoples Rights	18/06/2012	19:30:00	T-4 (Riocentro)	The Society for Threatened Peoples International is active in the field of indigenous peoples' rights. Together with 3 major actors in this field in Latin America, we want shed a light on the interrelationship between sustainable development and indigenous peoples. Indigenous peoples are considered most vulnerable to any changes in their physical environment due to their close linkage with nature. As a consequence, they have to be heard, their experience has to be shared, and their interests and needs duely considered in any global debate on sustainable development. The side-event will allow for exchanges between indigenous representatives, state representatives and other actors present at the Rio summit.	Society for Threatened Peoples - Switzerland	
Scalable Solutions - Managing water for economies, communities and nature	18/06/2012	19:30:00	T-9 (Riocentro)	This session will highlight solutions to water, food, and energy challenges through six important elements of WWF?s Freshwater outreach with partners. All these sessions are designed to show how collaborative approaches are bringing new thinking, partnerships and action to help solve our shared water challenges. These integrated initiatives encompass a broad range of stakeholder engagement, including governments, at both local and national level, corporations, investors, development banks and local communities. This work touches on the central challenges of water security and the trade-offs with energy and food. The six initiatives demonstrate positive and proactive contributions to solving water challenges and an ability to be magnified and replicated in other parts of the world, helping lay the foundations for a genuinely green economy.	WWF International	
Reframing environmental negotiations to create opportunities	18/06/2012	19:30:00	T-8 (Riocentro)	From Burden Bearing to Opportunity Sharing: How reframing environmental negotiations can create opportunities for sustainable development In order for the "Green Economy" strategy to achieve sustainable social and environmental pillar goals, some new approaches will be required. Three examples are provided. 1. Reframe the climate treaty as a sustainable development treaty that supplies low-carbon energy services for all rather than continuing to focus on pollution control. 2. Utilize adaptation for climate and other global change as a means towards resilient sustainable development instead of considering it as a reactive response. 3. Health is an essential input into the social pillar of sustainable development. Utilizing the health and environmental indicators from WHO can ensure that meaningful social goals are achieved in the development process.	Tufts Institute of the Environment	
Wind Power and Climate Change: Sustainable Development in Brazil	18/06/2012	19:30:00	P3-B (Riocentro)	The aim of this project is to inform about the benefits Wind Energy can bring to the humanity within the next years and about its positive influence on the planet?s climate change. The power sector is far from being the only culprit when it comes to climate change, it is the largest single source of emissions, accounting for about 40% of CO2 emissions, and about 25% of overall emissions. The options for making major emissions reductions in the power sector between now and 2020 are basically three: energy efficiency and conservation; fuel switching from coal to gas; and renewable energy, primarily Wind Power. JCI and Farias Brito College decided to study the Wind Power benefits and its direct influence on Earth?s climate change due to the fact Eolic Energy is the most popular source of energy in Ceará, northeast of Brazil, were Farias Brito College is situated at.	Junior Chamber International (JCI)	

Mediterranean Forests for Development: a key for adapting policies, territories and societies to climate change in the Middle East North African region	18/06/2012	19:30:00	T-11 (Riocentro)	The side event will highlight the contribution of MENA forest ecosystems to societies in the MENA region, especially in regard to climate change. The initiatives of the forest administrations involved in the Collaborative Partnership on Mediterranean Forests (CPMF) which promote the sustainable management of forests with a view to improving the resilience of MENA territories and societies to Climate Change will be presented and discussed with participants. The side-event will comprise three parts: ? Short presentations on: o the regional cooperation between forest administrations of the MENA region promoting the sustainable management of forests ; o the role of forest ecosystems? goods and services in climate change adaptation and innovative initiatives from the forest administrations in the MENA region ; o the contribution of the MENA forest sector to the Rio+20 outcomes and recommendations. ? Round-table with representatives of the forest administrations ? Poster exhibition in the side event room	Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)	
Aiming higher, unlocking tertiary education's potential for SD	18/06/2012	19:30:00	T-10 (Riocentro)	Aiming higher, unlocking tertiary education's potential to accelerate sustainable development and the transition to a fair and green economy Tertiary education plays a critical role in shaping the future, as political, business and civil society leaders are likely to be university graduates and will prepare the skilled workforce needed for a green economy. This event will emphasise the important role tertiary education plays in realising sustainable development and the transition to a green economy. Hosted by a collaborative of tertiary education sustainability organisations, in collaboration with numerous governments, we will answer: ? How can governments, NGOs, businesses and tertiary education instigate the necessary shift towards sustainable development and the transition to a Green Economy? ? How do we unlock the potential of tertiary education sector to transform society? ? What role should tertiary education play in creating and participating in the institutional framework for sustainable development? ? What funding and support mechanisms will need to be provided to ensure the success of tertiary education in sustainable development efforts?	Australasian Campuses Towards Sustainability (ACTS)

Objetivos do Desenvolvimento Sustentável da ONU	18/06/2012	11:00:00	Arena da Barra	A Declaração do Milênio em 2000 e a criação dos Objetivos do Milênio (ODM) levantaram um esforço global em busca da redução da pobreza. Mesmo na dimensão social tratada nos ODM, ainda é observada uma grande lacuna para se alcançar a melhor distribuição do bem-estar social. Uma agenda de desenvolvimento realista não pode negligenciar a ligação entre as dimensões sociais, econômicas e ambientais do desenvolvimento. Em contraste com os ODM, a proposta de se desenvolverem Objetivos do Desenvolvimento Sustentável (ODS) para serem discutidos na conferência da Rio+20 irá considerar de forma integral os aspectos sociais, econômicos e ambientais de um modo balanceado e bastante conectados. O Seminário proposto debaterá as perspectivas atualmente discutidas sobre o assunto no mundo acadêmico e nas organizações multilaterais.	Universidade de Brasília UnB	
UN Sustainable Development Goals	18/06/2012	11:00:00	Arena da Barra	A Declaração do Milênio em 2000 e a criação dos Objetivos do Milênio (ODM) levantaram um esforço global em busca da redução da pobreza. Mesmo na dimensão social tratada nos ODM, ainda é observada uma grande lacuna para se alcançar a melhor distribuição do bem-estar social. Uma agenda de desenvolvimento realista não pode negligenciar a ligação entre as dimensões sociais, econômicas e ambientais do desenvolvimento. Em contraste com os ODM, a proposta de se desenvolverem Objetivos do Desenvolvimento Sustentável (ODS) para serem discutidos na conferência da Rio+20 irá considerar de forma integral os aspectos sociais, econômicos e ambientais de um modo balanceado e bastante conectados. Forests, Livelihoods, and Green Economy	18/06/2012	14:00:00	Arena da Barra	The theme of this side event builds on the notion that environment stewardship and economic development are not mutually exclusive. Presentations will focus on identifying the critical role forests play in climate change and green economy at local, national, and global level. We will bring together experts in forest management from various organizations, and the speakers will share their expertise and real time experiences to demonstrate the relationship among forests, livelihoods, and green economy. They will also elaborate on the functions of forests, from carbon sequestration, water conservation to livelihoods development. In 2009, the record-heavy rain brought by the typhoon Morakot caused serious floods and mudslides in Taiwan, devastating people's lives. That was a typical case of extreme climate. After the disaster, we, the Environmental Quality Protection Foundation (EQPF), the Red Cross Society (Taiwan) and the Forestry Bureau of Taiwan initiated a series of reforestation projects at the mudslide areas, with the goal to restore the environment as well as local people's livelihoods. The organizations involved in the projects will show the great potential of cooperation among humanitarian and environmental organizations and government agencies, the importance of forest governance, and the feasibility of combining environment conservation and livelihood improvement into a green economy strategy to provide references for future reforestation and	Environmental Quality Protection Foundation (EQPF)

Responsabilidade socioambiental e segurança alimentar	18/06/2012	15:15:00	Arena da Barra	A importância de construir e fortalecer uma estratégia de segurança alimentar no contexto da economia verde mostra que a análise deveria considerar duas escalas na sua abordagem: (a) os desafios nas mudanças políticas macroeconômicas (b) os contextos econômicos e ambientais nacionais e locais e as técnicas de produção e os alvos de conservação ambiental. Este evento se propõe a discutir alternativas e caminhos para “esverdear” os setores agrícola e de pecuária e que considere o paradigma da segurança alimentar em relação atual modelo produtivo do agronegócio. Três questões serão tratadas: (1) Existe a possibilidade do agronegócio e a segurança alimentar co-existirem? (2) Quais são os caminhos para a adoção de um modelo de agricultura sustentável, que inclua valores ambientais e sociais na prática produtiva e no mercado? (3) Como o agronegócio, a agroecologia e a agricultura familiar podem caminhar juntas, interagirem e beneficiar uma a outra na lógica da busca por uma nova economia verde?.	WWF

WORLD ENVIRONMENTAL CONSTITUTION: TOWARD A SUSTAINABLE FUTURE	19/06/2012	9:30:00	T-10 (Riocentro)	To break through to a sustainable future, scientists from post-Chernobyl Ukraine, supported by their American, British and Belgian colleagues, urge development of the World Environmental Constitution (WEC). The WEC should be comprised of two indissoluble parts: a) definitive ? a global legal act prescribing basic norms for environmental safety and stimulation of a green economy for sustainability; b) institutional ? to fulfill the WEC mandate, a global system of environmental governance under the umbrella of the World Environmental Organization (WEO). The idea of a WEC is as old as Rio-92. First declared by scientists in April 1992, it has been repeatedly emphasized by Ukraine at UNGA sessions since 1997. Simultaneously, WEO establishment has been promoted by Brazil, France, Germany and other states. Without such a breakthrough, any political commitments on Rio+20 Summit, even reaffirmation of Rio-92 principles, will not provide desirable results.	International Institute-Association of Regional Ecological Problems

Leaders' Forum on the Future Women Want: Gender Equality and Women's Empowerment for Sustainable Development	19/06/2012	9:30:00	T-2 (Riocentro)	UN Women, in collaboration with the Government of Brazil, is organizing the Leaders? Forum on the Future Women Want on 19 and 21 June 2012. On 19 June 2012, the multi-stakeholder Leaders? Forum on the Future Women Forum: Gender Equality and Women?s Empowerment for Sustainable Development will bring together leaders and experts from governments, the UN System, civil society organizations, academia and the private sector to discuss and reaffirm the centrality and the inter-linkages of gender equality and women?s empowerment with the three dimensions of sustainable development?social, economic and environmental. This event will be followed by the Women Leaders? Summit on the Future Women Want on 21 June 2012. The event on is envisioned as an all-day event with Ms. Michelle Bachelet, Executive Director of UN Women as the convener. Eminent leaders representing their governments, the United Nations, civil society organizations, including grassroots groups, the private sector and the academia will share their experiences and contribute to the visioning on the way forward in advancing gender equality and women?s empowerment in sustainable development. Social media platforms will be utilized both to hear various voices from around the world to be shared to the participants as well as to disseminate to a broader audience the key messages emanating from the discussions	United Nations Entity for Gender Equality and the Empowerment of Women (UN Women)	
Energy for All and Global Sustainability: new scenarios and governance	19/06/2012	9:30:00	T-6 (Riocentro)	Presentation and panel discussion of the very latest new scenario work relating to energy for all in the context of global sustainability. The side event is centered around three just published global studies and will be followed by a panel discussion with a number of leading development thinkers globally who will reflect on implications in terms of sustainable development goals, including social, environmental and economic aspects, as well as the governance frameworks required from local to subnational levels to shape the future. The work will feed directly into the discussions about how sustainable energy can be represented in the follow up of the Rio outcomes, including the work on formulating sustainable development goals. In particular, it will discuss how international goals of environmental and resource sustainability, efficiency and energy access can be reconciled and made coherent over the long term, and what types of governance and institutional frameworks will be required at the international level.	Stockholm Environment Institute	

Low Carbon High Resilience Infrastructure for Sustainable Development	19/06/2012	9:30:00	P3-B (Riocentro)	Sustainable development integrates social, economic and environmental dimensions of development. Physical infrastructure serves all three dimensions. Solid and properly maintained infrastructure helps communities and nations ensure human well-being while preserving their environment. Climate change is the 21st century?s preeminent threat to sustainable development. Rural and urban communities lose livelihoods and homes, suffer physical damages and health problems and may need to relocate. Governments and communities are often forced to repeatedly commit limited resources to rebuilding vital infrastructure for transport, energy, education, and sanitation and health services. Based on its mandate (GA resolution A/RES/65/176) in procurement, civil works and physical infrastructure development, UNOPS primary contribution to sustainable development is made by supporting countries and their communities in their efforts to design and build high quality, low carbon emission infrastructure and protect these precious investments against climate risks. The main purpose of the side event will be to launch new initiatives and partnerships in these areas	United Nations Office for Project Services (UNOPS)	
Innovation in Green Growth Technology for Developing Countries	19/06/2012	9:30:00	T-3 (Riocentro)	The challenges of the 21st century require that developed and developing countries transform our approach to economic development. Central to this transformation is technological innovation, from basic research to commercialization, for environmental sustainability. The vast majority of this innovation has occurred in less than a dozen developed countries ? leaving a real risk that Least Developed Countries could miss the opportunity to ?leap frog? their current developing pathways onto more environmentally sustainable trajectories. How can international cooperation best support strengthening of research and development institutions in the developing world? Can innovative strategies bolster access to Intellectual Property? How can other models, like joint innovation centers, support Base of the Pyramid innovation? While capacity building for green growth in BRIC countries has soared, there remains tremendous need for green growth innovation in LDCs. Please join us to discuss a proposal for a new architecture that could support exactly this type of innovation.	The Brookings Institution	
Sustainable Energy for All - implications and opportunities for Africa	19/06/2012	9:30:00	T-4 (Riocentro)	The Sustainable Energy for All (SEfA) goals will have particular implications for sub-Saharan African countries, where 70% of people do not have access to electricity and 80% cook on wood or charcoal stoves. When many Africa countries aspire to become middle income or developed economies in the next two decades and many have large fossil fuel reserves, how can low-carbon sustainable goals be met without hindering economic objectives? How can peoples? total energy needs best be met and how can the wealth of renewable energy resources across Africa be better exploited to deliver access for all? Can Africa countries become leaders in sustainable energy? This event brings together civil society, private sector and government to explore implications of SEFA for African nations and people. How can benefits be maximised? What initiatives and investment are needed to make it a reality?	Practical Action	
UN-Water Day (part1)	19/06/2012	9:30:00	P3-6 (Riocentro)	PLEASE NOTE THAT THIS IS A FULL DAY EVENT The objectives of the Water Day are: 1. To demonstrate to the broad range of stakeholders, particularly decision makers, that some of the major challenges facing humanity today relate to water management; this will be based on findings of the major UN□]Water reports. 2. To identify major water issues that connect with the themes of the Rio+20 Conference, particularly its link with the notion of green economy. 3. To focus on the means of implementation, particularly focusing on the action areas where UN organizations and agencies can act together through UN□]Water.	UN-Water	

Tackling displacement by natural disasters in the sustainable developm	19/06/2012	9:30:00	P3-A	Each year, millions of people are forced from their homes and places of livelihood by the impact of disasters associated with ?natural? hazards. Development gains may be wiped out in a moment or eroded if communities are not prepared or resilient. Disaster-induced displacement undermines sustainable development and inhibits a community?s ability to recover by depriving it of its most important resource: its people. Rio+20 provides an opportunity to address the challenge of disaster-related displacement as part of renewed political and operational commitments to sustainable development. With climate change, the frequency and intensity of weather and climate-related disasters is expected to increase. The governments of affected countries, together with civil society and international actors, are challenged to respond and adapt. The achievement of sustainable development goals requires strengthened policy and operational responses to address the displacement risks and related protection concerns for especially the poorest people, and durable solutions for displaced persons as integral to development efforts.	Norwegian Refugee Council	
The Power of One Child: youth and children leading the way	19/06/2012	9:30:00	T-5 (Riocentro)	Educational approaches that child participation and empowerment are key components of the must be recognized to achieve the ?Future We Want.? Acknowledging the importance of environmental restoration and preservation to green development; necessitates the inclusion of children in a debate in which they are main stakeholders. With this in mind, the side-event, ?2.2 Billion, The Power of One Child: youth and children leading the way to the ?Future We Want? at Rio+20?, will consist of a panel of youth representatives from each partner organization, discussing recent progress in sustainable development, their own stories and perspectives on youth empowerment and environmental activism, underscoring action as we move forward from Rio+20. The roundtable will demonstrate true empowerment of children and young people that take action themselves and highlight the importance of policy-makers ensuring that children and youth activity- and action-based education is the essence of sustainable development.	Earth Child Institute	
Sustainable Intensification,Agroecology - Right to Food and Climate	19/06/2012	9:30:00	T-8 (Riocentro)	Sustainable Intensification and Agroecology: Which approaches work for the right to food, climate, and sustainable development? A key issue under discussion at UNCSD is the confluence between agriculture and climate change. The Rio+20 zero-draft outcome document calls for prioritizing sustainable intensification of food production? as well as ?increasing the use of appropriate technologies for sustainable agriculture?. In light of the right to food, this side event will review what kind of climate-friendly intensification is needed, and what technologies and practices should be considered as appropriate. Based on investigations and evidence, the panel will examine whether approaches promoted by stakeholders in the context of the green economy, such as no-tillage farming, low external input agriculture, and their inclusion in carbon markets, represent real solutions in view of human rights and climate criteria. The results of joint scientific research and projects will be presented, bringing new light to promising practices and policy measures to support their scale-up.	International Alliance of Catholic Development Agencies	
RSA Renewables Initiative - Unlocking RSA's Green Growth Potential	19/06/2012	9:30:00	P3-F	The South African Renewables Initiative (SARi) was launched on the 7 December 2011 in Durban, during UNFCCC COP17, in a bid to scale-up and secure long-term funding to enable the growth of the renewable energy industry in South Africa. The project was launched by the South African Ministers of Energy and Trade and Industry. The initiative is an International Partnership by the Government of the Republic of South Africa together with the Governments of Denmark, Germany, Norway and the UK, and the European Investment Bank. The Declaration of Intent was signed at Durban in December 2011.The (SARi) aims to mobilize domestic and international funding, and sector expertise, to support South Africa in implementing its ambitious plans for the scale-up of renewable energy. Aspect of the Side Event: ? Presentation of the ?Brand? ? Presentation of the Greening Policy of Surinam ? Presentation of the different cultures ? Presentation of the Indigenous people ? The effects of the ?branding? to ensure poverty alleviation in the areas at the end	Suriname	
WORLD ENVIRONMENTAL CONSTITUTION: TOWARD A SUSTAINABLE FUTURE	19/06/2012	9:30:00	T-10 (Riocentro)	To break through to a sustainable future, scientists from post-Chernobyl Ukraine, supported by their American, British and Belgian colleagues, urge development of the World Environmental Constitution (WEC). The WEC should be comprised of two indissoluble parts: a) definitive ? a global legal act prescribing basic norms for environmental safety and stimulation of a green economy for sustainability; b) institutional ? to fulfill the WEC mandate, a global system of environmental governance under the umbrella of the World Environmental Organization (WEO). The idea of a WEC is as old as Rio-92. First declared by scientists in April 1992, it has been repeatedly emphasized by Ukraine at UNGA sessions since 1997. Simultaneously, WEO establishment has been promoted by Brazil, France, Germany and other states. Without such a breakthrough, any political commitments on Rio+20 Summit, even reaffirmation of Rio-92 principles, will not provide desirable results.	International Institute-Association of Regional Ecological Problems

Leaders' Forum on the Future Women Want: Gender Equality and Women's Empowerment for Sustainable Development	19/06/2012	9:30:00	T-2 (Riocentro)	UN Women, in collaboration with the Government of Brazil, is organizing the Leaders? Forum on the Future Women Want on 19 and 21 June 2012. On 19 June 2012, the multi-stakeholder Leaders? Forum on the Future Women Forum: Gender Equality and Women?s Empowerment for Sustainable Development will bring together leaders and experts from governments, the UN System, civil society organizations, academia and the private sector to discuss and reaffirm the centrality and the inter-linkages of gender equality and women?s empowerment with the three dimensions of sustainable development?social, economic and environmental. This event will be followed by the Women Leaders? Summit on the Future Women Want on 21 June 2012. The event on is envisioned as an all-day event with Ms. Michelle Bachelet, Executive Director of UN Women as the convener. Eminent leaders representing their governments, the United Nations, civil society organizations, including grassroots groups, the private sector and the academia will share their experiences and contribute to the visioning on the way forward in advancing gender equality and women?s empowerment in sustainable development. Social media platforms will be utilized both to hear various voices from around the world to be shared to the participants as well as to disseminate to a broader audience the key messages emanating from the discussions	United Nations Entity for Gender Equality and the Empowerment of Women (UN Women)	
Energy for All and Global Sustainability: new scenarios and governance	19/06/2012	9:30:00	T-6 (Riocentro)	Presentation and panel discussion of the very latest new scenario work relating to energy for all in the context of global sustainability. The side event is centered around three just published global studies and will be followed by a panel discussion with a number of leading development thinkers globally who will reflect on implications in terms of sustainable development goals, including social, environmental and economic aspects, as well as the governance frameworks required from local to subnational levels to shape the future. The work will feed directly into the discussions about how sustainable energy can be represented in the follow up of the Rio outcomes, including the work on formulating sustainable development goals. In particular, it will discuss how international goals of environmental and resource sustainability, efficiency and energy access can be reconciled and made coherent over the long term, and what types of governance and institutional frameworks will be required at the international level.	Stockholm Environment Institute	

Low Carbon High Resilience Infrastructure for Sustainable Development	19/06/2012	9:30:00	P3-B (Riocentro)	Sustainable development integrates social, economic and environmental dimensions of development. Physical infrastructure serves all three dimensions. Solid and properly maintained infrastructure helps communities and nations ensure human well-being while preserving their environment. Climate change is the 21st century?s preeminent threat to sustainable development. Rural and urban communities lose livelihoods and homes, suffer physical damages and health problems and may need to relocate. Governments and communities are often forced to repeatedly commit limited resources to rebuilding vital infrastructure for transport, energy, education, and sanitation and health services. Based on its mandate (GA resolution A/RES/65/176) in procurement, civil works and physical infrastructure development, UNOPS primary contribution to sustainable development is made by supporting countries and their communities in their efforts to design and build high quality, low carbon emission infrastructure and protect these precious investments against climate risks. The main purpose of the side event will be to launch new initiatives and partnerships in these areas	United Nations Office for Project Services (UNOPS)	
Innovation in Green Growth Technology for Developing Countries	19/06/2012	9:30:00	T-3 (Riocentro)	The challenges of the 21st century require that developed and developing countries transform our approach to economic development. Central to this transformation is technological innovation, from basic research to commercialization, for environmental sustainability. The vast majority of this innovation has occurred in less than a dozen developed countries ? leaving a real risk that Least Developed Countries could miss the opportunity to ?leap frog? their current developing pathways onto more environmentally sustainable trajectories. How can international cooperation best support strengthening of research and development institutions in the developing world? Can innovative strategies bolster access to Intellectual Property? How can other models, like joint innovation centers, support Base of the Pyramid innovation? While capacity building for green growth in BRIC countries has soared, there remains tremendous need for green growth innovation in LDCs. Please join us to discuss a proposal for a new architecture that could support exactly this type of innovation.	The Brookings Institution	
Sustainable Energy for All - implications and opportunities for Africa	19/06/2012	9:30:00	T-4 (Riocentro)	The Sustainable Energy for All (SEfA) goals will have particular implications for sub-Saharan African countries, where 70% of people do not have access to electricity and 80% cook on wood or charcoal stoves. When many Africa countries aspire to become middle income or developed economies in the next two decades and many have large fossil fuel reserves, how can low-carbon sustainable goals be met without hindering economic objectives? How can peoples? total energy needs best be met and how can the wealth of renewable energy resources across Africa be better exploited to deliver access for all? Can Africa countries become leaders in sustainable energy? This event brings together civil society, private sector and government to explore implications of SEFA for African nations and people. How can benefits be maximised? What initiatives and investment are needed to make it a reality?	Practical Action	
UN-Water Day (part1)	19/06/2012	9:30:00	P3-6 (Riocentro)	PLEASE NOTE THAT THIS IS A FULL DAY EVENT The objectives of the Water Day are: 1. To demonstrate to the broad range of stakeholders, particularly decision makers, that some of the major challenges facing humanity today relate to water management; this will be based on findings of the major UN□]Water reports. 2. To identify major water issues that connect with the themes of the Rio+20 Conference, particularly its link with the notion of green economy. 3. To focus on the means of implementation, particularly focusing on the action areas where UN organizations and agencies can act together through UN□]Water.	UN-Water	

Tackling displacement by natural disasters in the sustainable developm	19/06/2012	9:30:00	P3-A	Each year, millions of people are forced from their homes and places of livelihood by the impact of disasters associated with ?natural? hazards. Development gains may be wiped out in a moment or eroded if communities are not prepared or resilient. Disaster-induced displacement undermines sustainable development and inhibits a community?s ability to recover by depriving it of its most important resource: its people. Rio+20 provides an opportunity to address the challenge of disaster-related displacement as part of renewed political and operational commitments to sustainable development. With climate change, the frequency and intensity of weather and climate-related disasters is expected to increase. The governments of affected countries, together with civil society and international actors, are challenged to respond and adapt. The achievement of sustainable development goals requires strengthened policy and operational responses to address the displacement risks and related protection concerns for especially the poorest people, and durable solutions for displaced persons as integral to development efforts.	Norwegian Refugee Council	
The Power of One Child: youth and children leading the way	19/06/2012	9:30:00	T-5 (Riocentro)	Educational approaches that child participation and empowerment are key components of the must be recognized to achieve the ?Future We Want.? Acknowledging the importance of environmental restoration and preservation to green development; necessitates the inclusion of children in a debate in which they are main stakeholders. With this in mind, the side-event, ?2.2 Billion, The Power of One Child: youth and children leading the way to the ?Future We Want? at Rio+20?, will consist of a panel of youth representatives from each partner organization, discussing recent progress in sustainable development, their own stories and perspectives on youth empowerment and environmental activism, underscoring action as we move forward from Rio+20. The roundtable will demonstrate true empowerment of children and young people that take action themselves and highlight the importance of policy-makers ensuring that children and youth activity- and action-based education is the essence of sustainable development.	Earth Child Institute	
Sustainable Intensification,Agroecology - Right to Food and Climate	19/06/2012	9:30:00	T-8 (Riocentro)	Sustainable Intensification and Agroecology: Which approaches work for the right to food, climate, and sustainable development? A key issue under discussion at UNCSD is the confluence between agriculture and climate change. The Rio+20 zero-draft outcome document calls for prioritizing sustainable intensification of food production? as well as ?increasing the use of appropriate technologies for sustainable agriculture?. In light of the right to food, this side event will review what kind of climate-friendly intensification is needed, and what technologies and practices should be considered as appropriate. Based on investigations and evidence, the panel will examine whether approaches promoted by stakeholders in the context of the green economy, such as no-tillage farming, low external input agriculture, and their inclusion in carbon markets, represent real solutions in view of human rights and climate criteria. The results of joint scientific research and projects will be presented, bringing new light to promising practices and policy measures to support their scale-up.	International Alliance of Catholic Development Agencies	
RSA Renewables Initiative - Unlocking RSA's Green Growth Potential	19/06/2012	9:30:00	P3-F	The South African Renewables Initiative (SARi) was launched on the 7 December 2011 in Durban, during UNFCCC COP17, in a bid to scale-up and secure long-term funding to enable the growth of the renewable energy industry in South Africa. The project was launched by the South African Ministers of Energy and Trade and Industry. The initiative is an International Partnership by the Government of the Republic of South Africa together with the Governments of Denmark, Germany, Norway and the UK, and the European Investment Bank. The Declaration of Intent was signed at Durban in December 2011.The (SARi) aims to mobilize domestic and international funding, and sector expertise, to support South Africa in implementing its ambitious plans for the scale-up of renewable energy.	South Africa	
Institutional arrangements for projects of PES in Lat. America & Brazil	19/06/2012	9:30:00	T-9	The purpose of this roundtable is to present an overview of the projects on Payment for Environmental Services (PES) in both Latin America and Brazil until the present day. An overview will be presented of this tool by representatives from the World Bank and the initiatives by the Boticário Group Foundation (Oasis Project) in partnership with government agencies (Minas Gerais State Attorney?s Office) and private social investment (Mitsubishi Corporation Foundation) will be highlighted as a model of PES involving several stakeholders which has succeeded since 2006. A ponte da banda larga	19/06/2012	11:00:00	Parque dos Atletas	Vincular TIC com a ação climática para uma economia de baixa emissão de carbono combatendo as mudanças climáticas exige uma ação global coordenada através da colaboração inter-setorial por parte dos governos, setor privado, organizações internacionais e da sociedade civil. Medidas de incremento não são suficientes. Os governos podem acelerar o ritmo de transformação, integrando o uso da Tecnologia da Informação e Comunicação com a política ambiental para posicionar os países em um curso para avançar, enquanto trabalham para atender o desenvolvimento nacional e os objetivos de redução da pobreza. O grupo de trabalho Comissão da banda larga para o desenvolvimento digital liderado pelo Sr Hans Vestberg, presidente e CEO da Ericsson emitiu um relatório que mostra como a banda larga pode contribuir para a redução de gases de efeito estufa, bem como a mitigação e a adaptação aos efeitos das mudanças climáticas. Como uma introdução a Conferência das Nações Unidas sobre Desenvolvimento Sustentável (Rio+20), em junho, o relatório apresenta dez recomendações da Comissão para os tomadores de decisões e líderes mundiais com o intuito de ativar e reforçar o poder da TIC e da banda larga no processo de acelerar o progresso global para uma economia de baixo carbono. Evento aberto ao público.	Embaixada da Suécia.	Elaine Weidman-Grunewald

Addressing Desertification and Land Degradation in LDC, LLDCs and SIDs	19/06/2012	11:30:00	T-10	The side-event will focus on LDCs, LLDCs and SIDS. The proposed theme will provide a platform to highlight and reaffirm the vulnerabilities faced by all three groups in the area of desertification and land degradation. The theme lends itself to discussions that involves the environment, economic and social aspects of the topic under consideration that will include, agriculture, water and food security issues and related issues that are vital to all three groups of countries. The side-event will also highlight the need for capacity-building and transfer of technologies to enable these three groups of countries combat desertification, land degradation, food insecurity and water related issues.	Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (OHRLLS)	
Building Resilience for Sustainable Development in the OIC Member Coun	19/06/2012	11:30:00	T-3	This side event will focus on one of the seven critical topics on the agenda of the Rio Conference- Disasters- with the aim of generating higher level of awareness among policy makers and experts in the OIC member countries with regard to the need for a comprehensive disaster risk management strategy as an integral part of their overall national development strategy. The majority of the population in the 57 member countries is extensively prone to natural disasters due to extensive exposure to natural hazards and other vulnerabilities. This session will bring together the representatives of governments, international organizations, and civil societies with the aim of mobilizing actions on the part of OIC member countries, and initiating the necessary exchange of knowledge and best practices to improve upon existing national capacities for building resilience to natural disasters.	Organization of Islamic Cooperation	
Glaciers and Sustainability in the Anthropocen	19/06/2012	11:30:00	T-5	Climate change as recognized widely is the acceleration of glacier melt around the world, particularly in the Himalayas and the Andes regions. Anthropogenic activity, tied to global trends to increase productive output is further impacting our glacier resources, critical both as regulators of water basins as well as for long term water storage, particularly during especially hot and dry years. This workshop will look specifically at work underway in the Latin America region to protect environmentally vulnerable glacier resources, seeking a balanced approach to economic activities such as mining and other large infrastructure occurring in high mountain areas. Some areas to be covered include legislation development to protect glaciers, public policy needs and opportunities relevant to glacier protection and existing industrial activity (including mining), an international protocol under development for Mining in Glacier Territory, the need to educate communities about glaciers and the role they play in our ecosystems.	CEDHA (Centro de Derechos Humanos y Ambiente)	
Sustainable Development Under Occupation: Achievements and Challenges	19/06/2012	11:30:00	T-6	The representative of the president of Palestine Mahmoud Abbas to the UNCSD RIO+20, H.E. Dr. Riad Malki, Minister of Foreign Affairs will open the side event to outline the Palestinian vision to achieve sustainable economic growth and development while being subjected to the ongoing Israeli occupation. The session will be based on the 2nd Palestinian sustainable development report titled ?Sustainable Development under Occupation: Achievements and Challenges?.	Permanent Observer Mission of Palestine	

The Forest Green Economy and South-South Cooperation	19/06/2012	11:30:00	P3-F	Green Economy principles of valuing and investing in natural capital and people, reforming high impact sectors to address sustainability, driving investment and financial flows towards pro-environment and pro-people growth and improving governance and forging partnership are key to ensure the transition to a successful equitable and balance growth. States of Acre in Brazil and Sabah in Malaysia are examples of important growth area in Latin America and Asia that are transitioning towards a green economic development pathways. The vision that guides this growth and the challenges in transforming its high impact sector, opportunities through adopting a credible and sustainable growth in the forest sector and partnership with NGO and private sector are some means by which changes are taking place. Heads of state will share their experiences and other partners will be contributing to the discussion on how to further transition these economies and how partners can play a role.	WWF International	
CLIMATE CHANGE DISASTERS-THE ROLE OF THE GLOBAL FIRST RESPONDERS in RR	19/06/2012	11:30:00	T-8	Nurses across the Borders (NAB), SeaTrust Institute and Africa Environmental Network proposed to highlight partnership with the UNISDR and other DRR specialists to demonstrate the symbiotic qualities of directly incorporating human health and first responder?s capacity building into DRR in a new way that delivers outcomes that help countries achieve their MDGs and deliverables for the Hyogo Framework for Action. At the heart of the collaborative strategy being showcased in this side event is multi-criteria vulnerability identification and intersectoral integration of knowledge, programs, finance and other resources to build resilience to climate related disasters. Responding to the COP 17 Durban by actively engaging health care professionals as FIRST RESPONDERS in disaster risk planning and action addresses many of the MDGs that developing countries are struggling to achieve. Represents a tangible intervention strategy to climate change disasters at a local level, while integrating with the multilateral processes that support local action.	Nurses Across the Borders Nigeria and SeaTrust Institute USA	
Zero Waste Strategies and Actions towards Sustainable Cities	19/06/2012	11:30:00	T-4	About the event: The rapid increase in volume and diversification of solid waste generated mainly as a result of economic growth, urbanization, industrialization, and unsustainable production and consumption patterns has had a severe impact on the global and local environment, natural resources, public health, local economy, and living conditions, and threatens the attainment of the Millennium Development Goals (MDGs). Sustainable cities attach significant importance to the need for moving towards resource efficient and zero waste society. Zero waste shifts the focus from end-of-pipe solutions and disposal practices, to promote waste minimization and cyclical use of materials in the economy. Zero waste is a long-term vision that ultimately envisages a thriving society that exists within nature?s resource constraints and its ability to assimilate waste.	International Solid Waste Association	
Crossborder Projects of Maiombe and Kaza: The actual status of impleme	19/06/2012	11:30:00	P3-A	The Mayombe Project aims at enhancing the implementation of the plan of action of the Convention on Biodiversity at regional level. Caribbean Youth Empowerment for Sustainable Development	19/06/2012	11:30:00	T-9	We plan to host a panel highlighting current initiatives being organized in the Dominican Republic for environmental care and sustainable development.	United Nations Association of the Dominican Republic (UNA-DR)	
Addressing Desertification and Land Degradation in LDC, LLDCs and SIDs	19/06/2012	11:30:00	T-10	The side-event will focus on LDCs, LLDCs and SIDS. The proposed theme will provide a platform to highlight and reaffirm the vulnerabilities faced by all three groups in the area of desertification and land degradation. The theme lends itself to discussions that involves the environment, economic and social aspects of the topic under consideration that will include, agriculture, water and food security issues and related issues that are vital to all three groups of countries. The side-event will also highlight the need for capacity-building and transfer of technologies to enable these three groups of countries combat desertification, land degradation, food insecurity and water related issues.	Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States (OHRLLS)	

Building Resilience for Sustainable Development in the OIC Member Coun	19/06/2012	11:30:00	T-3	This side event will focus on one of the seven critical topics on the agenda of the Rio Conference- Disasters- with the aim of generating higher level of awareness among policy makers and experts in the OIC member countries with regard to the need for a comprehensive disaster risk management strategy as an integral part of their overall national development strategy. The majority of the population in the 57 member countries is extensively prone to natural disasters due to extensive exposure to natural hazards and other vulnerabilities. This session will bring together the representatives of governments, international organizations, and civil societies with the aim of mobilizing actions on the part of OIC member countries, and initiating the necessary exchange of knowledge and best practices to improve upon existing national capacities for building resilience to natural disasters.	Organization of Islamic Cooperation	
Glaciers and Sustainability in the Anthropocen	19/06/2012	11:30:00	T-5	Climate change as recognized widely is the acceleration of glacier melt around the world, particularly in the Himalayas and the Andes regions. Anthropogenic activity, tied to global trends to increase productive output is further impacting our glacier resources, critical both as regulators of water basins as well as for long term water storage, particularly during especially hot and dry years. This workshop will look specifically at work underway in the Latin America region to protect environmentally vulnerable glacier resources, seeking a balanced approach to economic activities such as mining and other large infrastructure occurring in high mountain areas. Some areas to be covered include legislation development to protect glaciers, public policy needs and opportunities relevant to glacier protection and existing industrial activity (including mining), an international protocol under development for Mining in Glacier Territory, the need to educate communities about glaciers and the role they play in our ecosystems.	CEDHA (Centro de Derechos Humanos y Ambiente)	
Sustainable Development Under Occupation: Achievements and Challenges	19/06/2012	11:30:00	T-6	The representative of the president of Palestine Mahmoud Abbas to the UNCSD RIO+20, H.E. Dr. Riad Malki, Minister of Foreign Affairs will open the side event to outline the Palestinian vision to achieve sustainable economic growth and development while being subjected to the ongoing Israeli occupation. The session will be based on the 2nd Palestinian sustainable development report titled ?Sustainable Development under Occupation: Achievements and Challenges?.	Permanent Observer Mission of Palestine	
The Forest Green Economy and South-South Cooperation	19/06/2012	11:30:00	P3-F	Green Economy principles of valuing and investing in natural capital and people, reforming high impact sectors to address sustainability, driving investment and financial flows towards pro-environment and pro-people growth and improving governance and forging partnership are key to ensure the transition to a successful equitable and balance growth. States of Acre in Brazil and Sabah in Malaysia are examples of important growth area in Latin America and Asia that are transitioning towards a green economic development pathways. The vision that guides this growth and the challenges in transforming its high impact sector, opportunities through adopting a credible and sustainable growth in the forest sector and partnership with NGO and private sector are some means by which changes are taking place. Heads of state will share their experiences and other partners will be contributing to the discussion on how to further transition these economies and how partners can play a role.	WWF International	
CLIMATE CHANGE DISASTERS-THE ROLE OF THE GLOBAL FIRST RESPONDERS in RR	19/06/2012	11:30:00	T-8	Nurses across the Borders (NAB), SeaTrust Institute and Africa Environmental Network proposed to highlight partnership with the UNISDR and other DRR specialists to demonstrate the symbiotic qualities of directly incorporating human health and first responder?s capacity building into DRR in a new way that delivers outcomes that help countries achieve their MDGs and deliverables for the Hyogo Framework for Action. At the heart of the collaborative strategy being showcased in this side event is multi-criteria vulnerability identification and intersectoral integration of knowledge, programs, finance and other resources to build resilience to climate related disasters. Responding to the COP 17 Durban by actively engaging health care professionals as FIRST RESPONDERS in disaster risk planning and action addresses many of the MDGs that developing countries are struggling to achieve. Represents a tangible intervention strategy to climate change disasters at a local level, while integrating with the multilateral processes that support local action.	Nurses Across the Borders Nigeria and SeaTrust Institute USA	

Zero Waste Strategies and Actions towards Sustainable Cities	19/06/2012	11:30:00	T-4	About the event: The rapid increase in volume and diversification of solid waste generated mainly as a result of economic growth, urbanization, industrialization, and unsustainable production and consumption patterns has had a severe impact on the global and local environment, natural resources, public health, local economy, and living conditions, and threatens the attainment of the Millennium Development Goals (MDGs). Sustainable cities attach significant importance to the need for moving towards resource efficient and zero waste society. Zero waste shifts the focus from end-of-pipe solutions and disposal practices, to promote waste minimization and cyclical use of materials in the economy. Zero waste is a long-term vision that ultimately envisages a thriving society that exists within nature?s resource constraints and its ability to assimilate waste.	International Solid Waste Association

Movendo pessoas, mudando mentes - Soluções para transportes sustentáveis	19/06/2012	12:00:00	Parque dos Atletas	Os ônibus rodando em um sistema racional oferecem um transporte público rentável. O sistema tem que ser de fácil entendimento com tabelas de horários e mapas de viagem simples e cobertura espacial boa. Os ônibus devem ser confortáveis para os passageiros além de ter acesso a faixas de ônibus e ter prioridade no trânsito. A gestão operacional e de liderança da cidade tem que ousar e ver o sistema de ônibus como uma cadeia móvel de alta qualidade. Há muitos vencedores. O congestionamento do tráfego vai se dissolver. Com menos tráfego nas ruas a qualidade do ar vai melhorar e a vida urbana será mais agradável. As pessoas podem ir às escolas aos locais de trabalho que não podiam chegar antes. O aumento da mobilidade e acessibilidade é um benefício para o clima de negócios e para a sociedade civil. O resultado em desenvolvimento econômico e social, juntamente com a melhoria do meio ambiente, fornece a base para a estrada em direção à sustentabilidade. Pessoas que se deslocam efetivamente não apenas tornam a sociedade mais rica, mas também aumentam o fluxo de novas idéias, melhora o debate público e tomam decisões melhores. Evento aberto ao público. Palestrante: Urban Wästljung (Manager public and environmental affairs)	Embaixada da Suécia.	Urban Wästljung

Taking the Pulse of the Planet: Observing networks to support Climate	19/06/2012	13:15:00	UN3 (Barra Arena)	We all live on planet Earth. Our environment matters. How is it changing? Why is it changing? How can we precisely know, on local scales, the cause of extreme weather, floods, coastal erosion, and oceanic acidification? What does it mean for us and what can we do about it? We believe that answering these questions begins with establishing scientifically reliable, robust and continuous measurements of environmental attributes. While climate change is well understood at global scales, additional observations and science are needed on finer temporal and spatial scales to develop the level of understanding required to solve the challenges that society will face in the decades ahead. How do we take continuous observations and how we convert those observations into environmental intelligence, in real-time? This talk will explore how this very task is being accomplished to address key climate adaptation and mitigation challenges.	University of California Revelle Program on Climate Science and Policy	
Achieving SCP After Rio: Research, Practice & Capacity-building	19/06/2012	13:15:00	UN6 (Barra Arena)	Given that sustainable consumption and production is, as the World Summit on Sustainable Development highlighted, one of the "overarching objectives of sustainable development", what progress can we expect towards this objective in the next decade following the Rio+20 conference? What plans are in place or proposed for research, knowledge-exchange, practice, capacity-building and collaboration among educators, policymakers, journalists, business and public interest organizations? This event will include presentations and interactive discussions on plans for the 10YFP, SCP as a Sustainable Development Goal, ideas for a Global SCP Pact, and other steps forward. Members of the Global Research Forum on Sustainable Production & Consumption, policy makers and practitioners will consider practical strategies for future collaboration and steps to achieve the scp objective.	Citizens Network for Sustainable Development - CitNet	
Youth SRHR in the Context of Sustainable Development	19/06/2012	13:15:00	UN2 (Barra Arena)	Today, nearly half the world?s population ?more than 3 billion people?are under the age of 25. Globally, 215 million women around the world want to limit or delay births, but don?t have access to the family planning resources they need. When women have power over if, when and how many children to have, communities are better equipped to adapt sustainably, access education and health, and manage community resources. Yet, in some regions young women ages 15-19 are twice as likely to lack access to the contraception they want and need as women over twenty. Collectively, we as young people have a critical role to play in the shaping policies and programs surrounding young people?s sexual and reproductive health and rights, and a just and sustainable world.	Population Action International	
Developing Green Economy Approaches: The Role of Heart of Borneo	19/06/2012	13:30:00	T-10 (Riocentro)	Heart of Borneo (HoB) is an initiative of Brunei Darussalam, Indonesia and Malaysia based on the principles of conservation and sustainable development for the tropical highland forests in Borneo. The HoB initiative?s goal is to preserve and maintain the sustainability of one of Borneo?s best remaining rain forests, for the welfare of present and future generations. In November 2011, the State Government of Sabah (Malaysia) and WWF co-hosted an international symposium entitled, ?Heart of Borneo - Green Economic Development for Business and Environment?. Delegates from the three countries presented updates on the current national processes to develop green economy approaches. The side event aims to profile the efforts in Brunei, Indonesia and Malaysia under the trilateral Heart of Borneo Initiative to develop green economy approaches. The side event will showcase adoption of measurable targets for programs, policies, and investments as a leadership case for the Rio+20 Summit in 2012.	WWF International	
Green Growth Approach in the River Basin Management Planning	19/06/2012	13:30:00	P3-F (Riocentro)	Basin Protection Action Plans which have been prepared by General Directorate of Water Management have the same vision with River Basin Management Plans. Basin Protection Action Plans for 25 basins in Turkey aims; protection of the water resources potential in every condition, best use of water resources, prevention of pollution, improving the quality of polluted water resources. Water scarcity is an important subject for Turkey. To resolve the water scarcity problem and reduce the taxes, agricultural and water sectors make a great effort. Untreated waste water is an important point of interest. There is a project started between Netherlands and Turkey called ?Reuse of Treated Waste Water in Irrigation: Afyon Municipality Pilot Project? and Afyon was selected as pilot city. The aim of the project is to provide using new technologies for reuse of waste water in irrigation.		
Launch of a Higher Education Sustainability Initiative for Rio+20	19/06/2012	13:30:00	P3-6 (Riocentro)	During this side event, leaders of the international academic community will come together to announce a new Higher Education Sustainability Initiative for Rio+20, to be facilitated by an umbrella of United Nations partner organizations	United Nations Department of Public Information (DPI)	
AGRICULTURE & SUSTAINABLE SOCIEITIES: Food Security, Land & Solidarity	19/06/2012	13:30:00	T-8 (Riocentro)	The event will foster a dialogue on promoting human-centered sustainability strategies for the promotion of food security, stewardship of natural resources, land and the need for global solidarity to address these concerns.	Holy See (Observer State)	

Climate Change and Sustainable Development	19/06/2012	13:30:00	P3-A (Riocentro)	This side event is being organized by Grenada in cooperation with Guatemala and Bolivia. It will show-case environmental projects and programmes being developed in these three countries that tackle impacts from climate change especially in relation to water supply, food security and energy preparedness. It also includes a micro-pilot project that demonstrates the policies, strategies and actions that can be taken to green the economy of small island communities to induce poverty eradication and sustainable development. It also reflects the importance these countries give to the potential use of renewable energy resources and technologies. The event represents an opportunity for seeking potential financial support, and for promoting South-South and North-South cooperation and will highlight commitments being made for implementing sustainable development goals. The Minister of Environment, Foreign Trade and Export Development and the Minister of Carriacou and Petite Martinique of Grenada are expected to participate.	Grenada	
Green development - perspective from Vietnam and Bangladesh	19/06/2012	13:30:00	P3-B (Riocentro)	The Ministry of Planning and Investment - Vietnam a. Is a Government Agency, implementing state management in planning and investment field, including: synthesizing advice on socio-economic development strategies, programs and plans for the whole country; on economic management mechanisms and policies in general and in some concrete sectors: domestic and foreign investment, industrial and processing zones, official development assistance (ODA), procurement, enterprises, business registration nation-wide; state management on public services under the Ministry?s functions and responsibilities according to Laws. b. Is assigned by the Government to be: - Planning Agency for the whole country Socio-economic Development Strategies (SEDSs) and Socio-economic Development Plans (SEDPs) preparation; - Leading Agency for formulating and implementing Vietnam Green Growth Strategy. - Standing agency for National Sustainable Development Council (NSDC); - Focal point for MDGs and VDGs; Comprehensive Poverty Reduction and Growth Strategy (CPRGS).	Viet Nam	
Health within the Green Economy: Multisectoral Frameworks for NCD Control and Sustainable Development	19/06/2012	13:30:00	P3-E (Riocentro)	Health and sustainable development are inherently linked. Forms of development that create environmental problems almost always have important health implications, while the failure to adequately address pressing health issues undermines sustainable development efforts. Rio+20 provides a critical opportunity to discuss how multisectoral frameworks for sustainable development can help create environments that promote health, and help prevent and control non-communicable diseases (NCDs), like cancer, diabetes, heart and lung diseases. In particular, the panel will focus on three critical development challenges that link NCDs and environmental concerns: nutrition, healthy cities, and tobacco control.	American Cancer Society (ACS)	
Sustainable Development Goals: From 'silo thinking' towards an integrated approach. Insights from the European Report on Development	19/06/2012	13:30:00	T-6 (Riocentro)	The Rio+20 Conference is leading a new agenda around Sustainable Development Goals (SDGs), combining economic, social and environmental targets. Poor countries and the poorest people within them need growth and access to natural resources for human development ? which will require socioeconomic targets. Increased pressures on the planet?s natural resources will require environmental targets. The discussion on the SDGs should provide the opportunity to not only look at each resource individually, but also take account of the extensive linkages among resources such as water, energy and land (the ?WEL nexus?). The new European Report on Development (ERD) \"Confronting Scarcity: Managing water, energy and land for inclusive and sustainable growth\" suggests an ambitious integrated approach, which would embrace this nexus, avoiding perverse solutions and stimulating innovation. The ERD 2012 is an independent report prepared by ODI, DIE-GDI and ECDPM, and supported by the European Commission and seven EU Member States, including the UK. More information about the ERD: http://www.erd-report.eu/	European Commission	

The Landscape: Transformative Action thru Cross-Sectoral Coordination	19/06/2012	13:30:00	T-3 (Riocentro)	Around the world there are extraordinary examples of integrated sustainable land management approaches that have improved the livelihoods of millions of people; from the transformation of the Loess Plateau in China to the hillside restoration across Rwanda. These are called a landscape approach, which incorporates economic, social and environmental actions required to achieve sustainability. Global leaders have not emphasized and operationalized enough the value of local wisdom, global expertise and the transformative power that emerges when sustainable economic growth and food systems are combined. Food security is one illustration of the critical need for cross-sectoral approaches to economic development. We cannot feed people without protecting forests or protect forests without feeding people. We cannot sustainably grow our economies without valuing our environment. We must bridge the gaps between agriculture, forests, water, land and energy, and between rhetoric and action. The event will focus on two sectors: agriculture and forests.	UN Forum on Forests (UNFF)	
UN Forum on Forests (UNFF)	19/06/2012	13:30:00	T-6 (Riocentro)	Around the world there are extraordinary examples of integrated sustainable land management approaches that have improved the livelihoods of millions of people; from the transformation of the Loess Plateau in China to the hillside restoration across Rwanda. SUSTAINABLE FISHERIES IN THE COMMONWEALTH	19/06/2012	13:30:00	T-5 (Riocentro)	This Side Event will build on the experience in the Commonwealth Fisheries Programme and of the last two Commonwealth Heads of Government Meetings, working to identify transferable best practice in Commonwealth countries; build new partnerships to strengthen the role of universities in policy communities through South-South-North cooperation; thereby also enhancing the production and accessibility of relevant data on fisheries and their supporting ecosystems to improve the evidence base for policy; the relationship between fisheries decline, piracy and national security; the role of the Blue Economy in the Green Economy; how to strengthen regional fisheries governance mechanisms, including non-Commonwealth countries sharing common ecosystems; the role of inshore fisheries in providing protein for coastal communities, with particular attention paid to the role of women and child nutrition; the contribution of integrating aquaculture development as a supplement to capture fisheries in securing sustainable growth for Commonwealth countries, and the campaign to have IUU fishing declared a transnational organised crime.	Commonwealth Human Ecology Council (CHEC)	
Africa Day: Accelerating Progress towards Sustainable Development in Africa	19/06/2012	13:30:00	T-4 (Riocentro)	Significant challenges remain in implementing sustainable development commitments in Africa. Accelerating progress calls for, inter alia, an in-depth reflection on Africa?s sustainable development priorities, and strengthening strategic alliances and partnerships. Towards this end, the Africa Day will be held under the theme Accelerating Progress towards Sustainable Development in Africa. It will consist of a four-hour, moderated High Level Roundtable, focusing on strengthening and speeding up implementation and mobilising political leadership. Panellists will include African Heads of State and Government, Heads of African regional institutions and UN Agencies, and representatives of major groups. The roundtable will be followed by a press conference with the objective to disseminate to a wide audience the outcomes of the Roundtable, focusing on key policy messages that could inform the discussions at the Rio+20 Conference, and will conclude with a cocktail reception.	Republic of Congo

Africa Day: Accelerating Progress towards Sustainable Development in Africa	19/06/2012	13:30:00	T-4 (Riocentro)	Significant challenges remain in implementing sustainable development commitments in Africa. Accelerating progress calls for, inter alia, an in-depth reflection on Africa?s sustainable development priorities, and strengthening strategic alliances and partnerships. Towards this end, the Africa Day will be held under the theme Accelerating Progress towards Sustainable Development in Africa. It will consist of a four-hour, moderated High Level Roundtable, focusing on strengthening and speeding up implementation and mobilising political leadership. Panellists will include African Heads of State and Government, Heads of African regional institutions and UN Agencies, and representatives of major groups. The roundtable will be followed by a press conference with the objective to disseminate to a wide audience the outcomes of the Roundtable, focusing on key policy messages that could inform the discussions at the Rio+20 Conference, and will conclude with a cocktail reception.	Republic of Congo	
Developing Green Economy Approaches: The Role of Heart of Borneo	19/06/2012	13:30:00	T-10 (Riocentro)	Heart of Borneo (HoB) is an initiative of Brunei Darussalam, Indonesia and Malaysia based on the principles of conservation and sustainable development for the tropical highland forests in Borneo. The HoB initiative?s goal is to preserve and maintain the sustainability of one of Borneo?s best remaining rain forests, for the welfare of present and future generations. In November 2011, the State Government of Sabah (Malaysia) and WWF co-hosted an international symposium entitled, ?Heart of Borneo - Green Economic Development for Business and Environment?. Delegates from the three countries presented updates on the current national processes to develop green economy approaches. The side event aims to profile the efforts in Brunei, Indonesia and Malaysia under the trilateral Heart of Borneo Initiative to develop green economy approaches. The side event will showcase adoption of measurable targets for programs, policies, and investments as a leadership case for the Rio+20 Summit in 2012.	WWF International	
Green Growth Approach in the River Basin Management Planning	19/06/2012	13:30:00	P3-F (Riocentro)	Basin Protection Action Plans which have been prepared by General Directorate of Water Management have the same vision with River Basin Management Plans. Basin Protection Action Plans for 25 basins in Turkey aims; protection of the water resources potential in every condition, best use of water resources, prevention of pollution, improving the quality of polluted water resources. Water scarcity is an important subject for Turkey. To resolve the water scarcity problem and reduce the taxes, agricultural and water sectors make a great effort. Untreated waste water is an important point of interest. There is a project started between Netherlands and Turkey called ?Reuse of Treated Waste Water in Irrigation: Afyon Municipality Pilot Project? and Afyon was selected as pilot city. The aim of the project is to provide using new technologies for reuse of waste water in irrigation.		
Launch of a Higher Education Sustainability Initiative for Rio+20	19/06/2012	13:30:00	P3-6 (Riocentro)	During this side event, leaders of the international academic community will come together to announce a new Higher Education Sustainability Initiative for Rio+20, to be facilitated by an umbrella of United Nations partner organizations	United Nations Department of Public Information (DPI)	
AGRICULTURE & SUSTAINABLE SOCIEITIES: Food Security, Land & Solidarity	19/06/2012	13:30:00	T-8 (Riocentro)	The event will foster a dialogue on promoting human-centered sustainability strategies for the promotion of food security, stewardship of natural resources, land and the need for global solidarity to address these concerns.	Holy See (Observer State)	

Climate Change and Sustainable Development	19/06/2012	13:30:00	P3-A (Riocentro)	This side event is being organized by Grenada in cooperation with Guatemala and Bolivia. It will show-case environmental projects and programmes being developed in these three countries that tackle impacts from climate change especially in relation to water supply, food security and energy preparedness. It also includes a micro-pilot project that demonstrates the policies, strategies and actions that can be taken to green the economy of small island communities to induce poverty eradication and sustainable development. It also reflects the importance these countries give to the potential use of renewable energy resources and technologies. The event represents an opportunity for seeking potential financial support, and for promoting South-South and North-South cooperation and will highlight commitments being made for implementing sustainable development goals. The Minister of Environment, Foreign Trade and Export Development and the Minister of Carriacou and Petite Martinique of Grenada are expected to participate.	Grenada	
Green development - perspective from Vietnam and Bangladesh	19/06/2012	13:30:00	P3-B (Riocentro)	The Ministry of Planning and Investment - Vietnam a. Is a Government Agency, implementing state management in planning and investment field, including: synthesizing advice on socio-economic development strategies, programs and plans for the whole country; on economic management mechanisms and policies in general and in some concrete sectors: domestic and foreign investment, industrial and processing zones, official development assistance (ODA), procurement, enterprises, business registration nation-wide; state management on public services under the Ministry?s functions and responsibilities according to Laws. b. Is assigned by the Government to be: - Planning Agency for the whole country Socio-economic Development Strategies (SEDSs) and Socio-economic Development Plans (SEDPs) preparation; - Leading Agency for formulating and implementing Vietnam Green Growth Strategy. - Standing agency for National Sustainable Development Council (NSDC); - Focal point for MDGs and VDGs; Comprehensive Poverty Reduction and Growth Strategy (CPRGS).	Viet Nam	
Health within the Green Economy: Multisectoral Frameworks for NCD Control and Sustainable Development	19/06/2012	13:30:00	P3-E (Riocentro)	Health and sustainable development are inherently linked. Forms of development that create environmental problems almost always have important health implications, while the failure to adequately address pressing health issues undermines sustainable development efforts. Rio+20 provides a critical opportunity to discuss how multisectoral frameworks for sustainable development can help create environments that promote health, and help prevent and control non-communicable diseases (NCDs), like cancer, diabetes, heart and lung diseases. In particular, the panel will focus on three critical development challenges that link NCDs and environmental concerns: nutrition, healthy cities, and tobacco control.	American Cancer Society (ACS)	
Sustainable Development Goals: From 'silo thinking' towards an integrated approach. Insights from the European Report on Development	19/06/2012	13:30:00	T-6 (Riocentro)	The Rio+20 Conference is leading a new agenda around Sustainable Development Goals (SDGs), combining economic, social and environmental targets. Poor countries and the poorest people within them need growth and access to natural resources for human development ? which will require socioeconomic targets. Increased pressures on the planet?s natural resources will require environmental targets. The discussion on the SDGs should provide the opportunity to not only look at each resource individually, but also take account of the extensive linkages among resources such as water, energy and land (the ?WEL nexus?). The new European Report on Development (ERD) \"Confronting Scarcity: Managing water, energy and land for inclusive and sustainable growth\" suggests an ambitious integrated approach, which would embrace this nexus, avoiding perverse solutions and stimulating innovation. The ERD 2012 is an independent report prepared by ODI, DIE-GDI and ECDPM, and supported by the European Commission and seven EU Member States, including the UK. More information about the ERD: http://www.erd-report.eu/	European Commission	

The Landscape: Transformative Action thru Cross-Sectoral Coordination	19/06/2012	13:30:00	T-3 (Riocentro)	Around the world there are extraordinary examples of integrated sustainable land management approaches that have improved the livelihoods of millions of people; from the transformation of the Loess Plateau in China to the hillside restoration across Rwanda. These are called a landscape approach, which incorporates economic, social and environmental actions required to achieve sustainability. Global leaders have not emphasized and operationalized enough the value of local wisdom, global expertise and the transformative power that emerges when sustainable economic growth and food systems are combined. Food security is one illustration of the critical need for cross-sectoral approaches to economic development. We cannot feed people without protecting forests or protect forests without feeding people. We cannot sustainably grow our economies without valuing our environment. We must bridge the gaps between agriculture, forests, water, land and energy, and between rhetoric and action. The event will focus on two sectors: agriculture and forests.	UN Forum on Forests (UNFF)	
UN Forum on Forests (UNFF)	19/06/2012	13:30:00	T-6 (Riocentro)	Around the world there are extraordinary examples of integrated sustainable land management approaches that have improved the livelihoods of millions of people; from the transformation of the Loess Plateau in China to the hillside restoration across Rwanda. Lançamento da ISO 14005 / SEBRAE e ABNT	19/06/2012	14:00:00	Aterro do Flamengo	Durante a Rio+20, a ABNT irá publicar a ABNT NBR ISO 14005, o lançamento oficial será realizado em parceria com o SEBRAE. A ISO 14005, oferecerá orientações para que as organizações, principalmente aquelas de pequeno porte, implementem a ABNT NBR ISO 14001:2004, Sistemas da gestão ambiental - Requisitos com orientações para uso, por meio de um processo em etapas. A ISO 14005 é uma norma com diretrizes para a implantação de um Sistema de Gestão Ambiental, atendendo aos requisitos da ISO 14001. A nova norma também incluirá orientações para o uso de indicadores de desempenho ambiental, de tal forma que se possa ir medindo os resultados da implantação do SGA ao longo do tempo e a cada fase.		SEBRAE
Políticas Públicas e a Rio+20	19/06/2012	14:00:00	Parque dos Atletas	Apresentação das políticas públicas sustentáveis do governo de Minas Gerais. Foram selecionadas no Menu de políticas ações inovadoras com vistas ao avanço rumo a sustentabilidade. Serão apresentados conceitos e resultados gerados. Espera-se ser uma oportunidade de troca de experiências com outras instituições e governos. Evento aberto ao público.	Governo do Estado de Minas Gerais.	
Inovação Verde em Turismo	19/06/2012	14:00:00	SESC	O evento proverá um panorama do conceito de inovação verde, os principais obstáculos sob a perspectiva dos setores privado e público, e ajudará a identificar meios de superá-los. As apresentações de entidades dos setores privado e público irão destacar o valor intrínseco da inovação verde para companhias, governos, destinos e suas comunidades, e defender a colaboração, o diálogo e o intercâmbio de melhores práticas setoriais e intersetoriais.	World Tourism Organization (UNWTO); UN Environment Prog. (UNEP) and Org. for Economic Cooperation and Development (OECD), with support by CNC-SESC-SENAC and Ministry of Tourism (Brazil)	
Green Innovation in Tourism	19/06/2012	14:00:00	SESC	The event will provide an overview of the concept of green innovation, the main obstacles from a private and public sector perspective, and help identify ways of overcoming them. The presentations from private and public sector entities will highlight the intrinsic value of green innovation for companies, governments, destinations and their communities, and make the case for sectoral as well as cross-sectoral collaboration, dialogue and exchange of best practices.	World Tourism Organization (UNWTO); UN Environment Prog. (UNEP) and Org. for Economic Cooperation and Development (OECD), with support by CNC-SESC-SENAC and Ministry of Tourism (Brazil)	
Projeto CEnaRios é apresentado durante Rio+20	19/06/2012	14:00:00	Cais do Porto	Envolver o público jovem de diversos países nas discussões sobre os problemas socioambientais globais e seus impactos locais e possíveis soluções. Essa é a proposta do projeto CEnaRios - versão em português para Science Centers Engagement and the Rio Summit (SCEnaRioS) - desenvolvido pela Fundação Oswaldo Cruz (Fiocruz) e a Association of Science-Technology Centers (ASTC), em parceria com o Instituto de Arte Contemporânea e Jardim Botânico (Inhotim). Os participantes, jovens de 15 a 19 anos de museus de ciências de doze países, receberam a tarefa de desenvolver seis projetos piloto sobre temas como acesso à água potável, alternativas sustentáveis de consumo de energia e saúde. Os resultados dos projetos desenvolvidos serão apresentados durante uma videoconferência com a participação de todos os jovens contemplados pelo CEnaRios. A conferência virtual, que terá a presença do presidente da Fiocruz, Paulo Gadelha, e o diretor de Relações Internacionais da ASTC, Walter Staveloz, será realizada durante o Pop Ciência, evento paralelo à Rio +20, no dia 19 de junho, às 14h, no Armazém 4 do Cais do Porto do Rio de Janeiro. “As discussões relacionadas à Rio+20 mostram que a forma como nos relacionamos com o planeta precisa mudar. Neste contexto, é fundamental os jovens assumirem um papel protagonista para pensarmos em um desenvolvimento mais sustentável. É justamente esse o objetivo do CEnaRios”, explica Luisa Massarani, chefe do Museu da Vida e responsável pelo projeto por parte da Fiocruz.	Danielle Monteiro

BANDA LARGA E TICs PARA SOCIEDADES INTELIGENTES, INCLUSIVAS E SUSTENTÁVEIS	19/06/2012	14:45:00	Parque dos Atletas	O evento analisará as oportunidades oferecidas pela banda larga e TICs no contexto do desenvolvimento sustentável, considerando os pilares de crescimento econômico inteligente, desenvolvimento social e proteção ambiental. Além disso, discutir-se-ão os obstáculos e desafios políticos, legais e regulamentares para a banda larga atingir o seu potencial	Ministério das Comunicações e UIT (União Internacional de Telecomunicações)	Paulo Bernardo Silva, Ministro das Comunicações.
APA dos Morros Garapenses: da Mobilização Popular à Sustentabilidade Regional. .	19/06/2012	15:00:00	Parque dos Atletas	A palestra visa mostrar o histórico de criação da APA dos Morros Garapenses, a primeira Unidade de Conservação do Maranhão criada pela mobilização popular junto ao governo do Estado. A mesma foi criada há 3 anos, em 31 de Dezembro de 2008 graças à mobilização primeira dos ambientalistas da ABAMA- Associação Bacelarense de Proteção ao Meio Ambiente, ONG fundado em 2003 em Duque Bacelar para proteger o Morro Garapa e os ecossistemas não destruídos ao derredor da cidade. Depois a mobilização envolveu ambientalistas das cidades de Buriti, Coelho Neto e Afonso Cunha, levado a extensão da defesa dos ecossistemas da região, surgindo assim A ÁREA DE PROTEÇÃO AMBIENTAL DOS MORROS GARAPENSES com 234.767 ha. Os trabalhos hoje continuam mais abrangentes, envolvendo outros parceiros institucionais e as populações da área, ocasionando o surgimento de diversos projetos de sustentabilidade sócio- ambientais entre os municípios formadores da Unidade de Conservação. Evento aberto ao público. Promovido pela ABAMA – Associação Bacelarense de Proteção ao Meio Ambiente/Secretaria de Estado do Meio Ambiente e Recursos Naturais do Maranhão. Palestrante: Francisco Carlos Machado, Presidente da ABAMA, Vice- Presidente da APA dos Morros Garapenses.		Francisco Carlos Machado
Banda Larga e TICs para sociedades inteligentes, inclusivas e sustentáveis	19/06/2012	15:00:00	Parque dos Atletas	O evento analisará as oportunidades oferecidas pela banda larga e TICs no contexto do desenvolvimento sustentável, considerando os pilares de crescimento econômico inteligente, desenvolvimento social e proteção ambiental. Além disso, discutir-se-ão os obstáculos e desafios políticos, legais e regulamentares para a banda larga atingir o seu potencial. Evento restrito a convidados. Going Carbon Negative	19/06/2012	15:00:00	Arena da Barra	Room UN7	Green Economics Institute (GEI)	
Going Carbon Negative: Why Carbo	19/06/2012	15:00:00	UN7 (Barra Arena)	This side event will address the core Rio+20 theme of how to accelerate the green economy globally. Hosted by The Green Economics Institute, the event will examine the critical importance of developing and deploying ?carbon negative technologies,? reducing the net amount of CO2 in the atmosphere. R Green Economics as a pathway for green jobs and survivability underlies the ideas of this presentation and discussion session. This event will examine the importance and potential of green economics and carbon negative technologies and other approaches to runnaway climate change.	Green Economics Institute (GEI)	

Pacific islands: Applying the green economy in a blue world	19/06/2012	15:30:00	T-10 (Riocentro)	This side event discusses the Pacific Regional Oceans Policy and the Pacific Oceanscape Framework for implementing the ocean policy. It highlights the challenges for small islands in managing the Planet?s biggest resource ? the Pacific Ocean - not only for themselves but for the whole global community; and, in particular, raises the special case of small islands in terms of their vulnerabilities, location, size, remoteness and capacities. The special case for SIDS is well established since the initial UNCED. However, despite significant progress, the factors that make SIDS a special case in achieving sustainable development remain. We need to examine how we can retain and manage this special case through the evolving institutional framework for sustainable development to ensure that SIDS needs are accommodated and the modalities for implementation appropriate to their special context.	Secretariat of the Pacific Regional Environment Programme (SPREP)	
Defying Disasters: A Tri-Continental South-South Dialogue	19/06/2012	15:30:00	T-6 (Riocentro)	Philippines, Kenya and Colombia have joined forces through their public and civil society sectors, to address the pressing issues of disaster mitigation, adaptation and risk management as a novel example of South-South Cooperation. The ultimate goal is to replicate solutions to problems to other countries in three continents of developing world. The process known as ?Cartagena Dialogues? hopes to assist response to disasters so that resources can be utilized for sustainable development purposes instead of diverting them to respond and recover from disasters. This Cartagena dialogue addresses the key issues on the UNCSD agenda of making some of the poorest communities, including countries with largest number of displaced people and of refugees, more resilient to disasters. Special emphasis is paid on the role of local authorities, use of indigenous techniques, creative cultural communications and strengthening of financial mechanisms to generate some resources at local level for immediate response to disasters.	Philippines	
Challenges and Opportunities for a Mediterranean Green Growth	19/06/2012	15:30:00	T-3 (Riocentro)	The collective efforts towards achieving sustainable development in the Mediterranean eco-region were presented twenty years ago at the United Nations Conference on Environment and Development in 1992 (UNCED), ten years ago at the 2002 World Summit on Sustainable Development (WSSD) in Johannesburg (?The Mediterranean Eco-Region: the first firm steps towards Sustainability?) and hopefully once again at Rio+20. This side event will bring together the major institutions and stakeholders from European, Western Asian and North African countries to provide an overview of the joint efforts of strengthened cooperation, common vision and shared strategies towards achieving sustainable development. Under the light of a growing financial volatility, the new realities following the Arab Spring, and taking into consideration the emerging challenges (Integration, Implementation, Coherence) the event aspires to renew the political commitment on a realistic basis in an eco-region located at the North-South interface, facing serious demographic, economic, environmental, technological and socio-cultural problems.	Mediterranean Information Office for Environment, Culture and Sustainable Development (MIO-ECSDE)	
SPACE FOR SUSTAINABLE DEVELOPMENT	19/06/2012	15:30:00	P3-E (Riocentro)	Under the title ?SPACE FOR SUSTAINABLE DEVELOPMENT? this side-event will focus on the Contribution of Space-based Information and Technologies to Support the Implementation of Rio+20 Outcomes and Actions. The proposed side event will focus on space and its contributions that would lead to a convergence on the use of space-based technologies for sustainable development and assist in identifying the next actions that would embrace Rio+20 outcomes.	United Nations Office for Outer Space Affairs (UNOOSA)	
Food Security and Safety for Development in a Changing Arab World	19/06/2012	15:30:00	P3-F (Riocentro)	Ensuring food security and safety has a strong role to play in supporting development in the Arab region, given its huge reliance on food export. The changes that the region is currently undergoing increase the need for carefully designed policies and programmes that contribute to food security and safety and ultimately ensure social security. Within this context, the proposed Arab side event is expected to contribute to: a) The creation of a forum/network of civil society and international and regional partners for ensuring awareness and ongoing information on food safety and food security; b) The elaboration of a regional development project targeting public institutions and civil society with the overall objective of promoting safe and secure food habits and dynamics. The side event will feature a short video expressing the views of the youth on food security and food safety issues at national levels and in the Arab world.	League of Arab States	

Human Rights at the heart of Sustainable Development - Honouring Principle 1	19/06/2012	15:30:00	T-5 (Riocentro)	The 1992 Rio Declaration on Environment and Development was founded on human rights principles starting with Principle One - "Human beings should be placed at the centre of concerns for sustainable development. They are entitled to a healthy and productive life in harmony with nature.? The thematic focus of this panel will be on human rights and sustainable development, and why a human rights-based approach is critical to the success of achieving the twin goals of (i) moving towards a green economy and (ii) building the institutional framework for sustainable development. Since the 1992 Earth Summit the world has seen tremendous changes. Within a generation, nearly one and half billion people have been added to the planet ? around a billion in cities. Globalization has intensified, but its benefits have not been shared equally. Inequalities have widened and despite some progress in achieving the MDGs, there are massive disparities between and within countries. The last decade has seen the hottest temperatures since humans began recording temperatures around 150 years ago. Climate change threatens to destroy our path towards sustainable development, a global financial crisis has shaken the planet?s economic foundations, and a global food crisis has brought suffering and unrest. Perhaps most worryingly, the global political will to address the structural and root causes of	Office of the High Commissioner for Human Rights (OHCHR)	
Sustainable city, a concrete utopia	19/06/2012	15:30:00	P3-6 (Riocentro)	Sub headlines: How to govern and administrate the cities of tomorrow? This conference focuses on the challenges that urbanisation pose to environment and the way our cities will be adapting to climate change. Urban organisation will have to be re thought totally. In this respect, the role of different stakeholders is likely to be changing. The conference will feature elected people, technical experts, enterprises and other organisations. The debate will be followed by the signature of a cooperation agreement between the City of Montpellier and Rio City Council. The Club France Rio+20 proposes to examine how city stakeholders (local authorities, enterprises, associations) are tackling these new challenges. How to plan a sustainable city, while its concept itself is still to be defined? What are the priorities? How to design projects that conciliate foresight, transversality and global vision? Which tools can be used by developers? How are the responsibilities shared in the process of change?		
Bio-economy and development. Beyond the crisis, a New World	19/06/2012	15:30:00	T-11 (Riocentro)	Bio-economy is an environmental and economic theory and practice by which you can proceed towards a new ecological and social development. With bio-economy you can define new areas of research and develop new programs for an appropriate use of natural, biological and renewable resources to overcome poverty and produce safe and wholesome food, but also materials, energy and other products. In this regard, we propose to launch a bio-economy strategy in view of the world's population increase (up to 9 billion inhabitants in 2050) and the scarcity of natural resources.	COBASE ? Cooperativa Tecnico Scientifica di Base	
Business Taking the Lead: Meeting the Challenge of Sustainable Energy	19/06/2012	15:30:00	T-8 (Riocentro)	How do we achieve universal access to modern energy services, double the rate of improvement in energy efficiency and double the share of renewable energy in the global energy mix? Companies in the renewable energy, energy efficiency and natural gas sectors can deliver the technology solutions that will help countries achieve the vision of the UN Secretary General?s Sustainable Energy for All. This panel of private sector executives will discuss: ? What policy incentives will ensure a greater access to clean energy? ? Where does public sector finance best leverage and unlock private sector investments? ? What partnership opportunities can the clean energy business community offer at Rio ? to improve the energy efficiency of our building stock? To expand energy access through renewable and distributed forms of energy? To deploy smarter technologies to better connect our communities?	Business Council for Sustainable Energy (BCSE)	

Putting Green Economy into practice	19/06/2012	15:30:00	P3-B (Riocentro)	Switzerland has proposed an international Green Economy Roadmap as an outcome of the Rio+20 Conference. The side event will illustrate how Green Economy can benefit both developed and devel-oping countries and share some practical experiences of policies and instruments for assisting the transformation towards a green economy. The first example shares some success stories in promoting the development and implementation of Sustainable Public Procurement (SPP) through the Marrakech Task Force on SPP and gives an outlook on how the work will be continued under the lead of UNEP. The second example provides lessons from the longstanding collaboration of Switzerland with UNIDO and UNEP in establishing a network of Cleaner Production Centers in developing countries which has facilitated the transfer of know-how and technology for improving production processes and resource efficiency. The last example will address the issue of sustainable agriculture and the necessity of land tenure rights.	Switzerland	
Mexico's contribution to sustainable development	19/06/2012	15:30:00	T-9 (Riocentro)	Environment is a priority in the national agenda. We are investing human and economic resources to make the difference in different issues. It is our interest to share with the international community some progresses to reach by this Ministry and other involved actors in specific issues such as: ? Climate change ? Water ? Food security ? Short- lived climate forcers	National Water Commission	
Pacific islands: Applying the green economy in a blue world	19/06/2012	15:30:00	T-10 (Riocentro)	This side event discusses the Pacific Regional Oceans Policy and the Pacific Oceanscape Framework for implementing the ocean policy. It highlights the challenges for small islands in managing the Planet?s biggest resource ? the Pacific Ocean - not only for themselves but for the whole global community; and, in particular, raises the special case of small islands in terms of their vulnerabilities, location, size, remoteness and capacities. The special case for SIDS is well established since the initial UNCED. However, despite significant progress, the factors that make SIDS a special case in achieving sustainable development remain. We need to examine how we can retain and manage this special case through the evolving institutional framework for sustainable development to ensure that SIDS needs are accommodated and the modalities for implementation appropriate to their special context. Defying Disasters: A Tri-Continental South-South Dialogue	19/06/2012	15:30:00	T-6 (Riocentro)	Philippines, Kenya and Colombia have joined forces through their public and civil society sectors, to address the pressing issues of disaster mitigation, adaptation and risk management as a novel example of South-South Cooperation. The ultimate goal is to replicate solutions to problems to other countries in three continents of developing world. The process known as ?Cartagena Dialogues? hopes to assist response to disasters so that resources can be utilized for sustainable development purposes instead of diverting them to respond and recover from disasters. This Cartagena dialogue addresses the key issues on the UNCSD agenda of making some of the poorest communities, including countries with largest number of displaced people and of refugees, more resilient to disasters. Special emphasis is paid on the role of local authorities, use of indigenous techniques, creative cultural communications and strengthening of financial mechanisms to generate some resources at local level for immediate response to disasters.	Philippines	
Challenges and Opportunities for a Mediterranean Green Growth	19/06/2012	15:30:00	T-3 (Riocentro)	The collective efforts towards achieving sustainable development in the Mediterranean eco-region were presented twenty years ago at the United Nations Conference on Environment and Development in 1992 (UNCED), ten years ago at the 2002 World Summit on Sustainable Development (WSSD) in Johannesburg (?The Mediterranean Eco-Region: the first firm steps towards Sustainability?) and hopefully once again at Rio+20. This side event will bring together the major institutions and stakeholders from European, Western Asian and North African countries to provide an overview of the joint efforts of strengthened cooperation, common vision and shared strategies towards achieving sustainable development. Under the light of a growing financial volatility, the new realities following the Arab Spring, and taking into consideration the emerging challenges (Integration, Implementation, Coherence) the event aspires to renew the political commitment on a realistic basis in an eco-region located at the North-South interface, facing serious demographic, economic, environmental, technological and socio-cultural problems.	Mediterranean Information Office for Environment, Culture and Sustainable Development (MIO-ECSDE)	

SPACE FOR SUSTAINABLE DEVELOPMENT	19/06/2012	15:30:00	P3-E (Riocentro)	Under the title ?SPACE FOR SUSTAINABLE DEVELOPMENT? this side-event will focus on the Contribution of Space-based Information and Technologies to Support the Implementation of Rio+20 Outcomes and Actions. The proposed side event will focus on space and its contributions that would lead to a convergence on the use of space-based technologies for sustainable development and assist in identifying the next actions that would embrace Rio+20 outcomes.	United Nations Office for Outer Space Affairs (UNOOSA)	
Food Security and Safety for Development in a Changing Arab World	19/06/2012	15:30:00	P3-F (Riocentro)	Ensuring food security and safety has a strong role to play in supporting development in the Arab region, given its huge reliance on food export. The changes that the region is currently undergoing increase the need for carefully designed policies and programmes that contribute to food security and safety and ultimately ensure social security. Within this context, the proposed Arab side event is expected to contribute to: a) The creation of a forum/network of civil society and international and regional partners for ensuring awareness and ongoing information on food safety and food security; b) The elaboration of a regional development project targeting public institutions and civil society with the overall objective of promoting safe and secure food habits and dynamics. The side event will feature a short video expressing the views of the youth on food security and food safety issues at national levels and in the Arab world.	League of Arab States	
Human Rights at the heart of Sustainable Development - Honouring Principle 1	19/06/2012	15:30:00	T-5 (Riocentro)	The 1992 Rio Declaration on Environment and Development was founded on human rights principles starting with Principle One - "Human beings should be placed at the centre of concerns for sustainable development. They are entitled to a healthy and productive life in harmony with nature.? The thematic focus of this panel will be on human rights and sustainable development, and why a human rights-based approach is critical to the success of achieving the twin goals of (i) moving towards a green economy and (ii) building the institutional framework for sustainable development. Since the 1992 Earth Summit the world has seen tremendous changes. Within a generation, nearly one and half billion people have been added to the planet ? around a billion in cities. Globalization has intensified, but its benefits have not been shared equally. Inequalities have widened and despite some progress in achieving the MDGs, there are massive disparities between and within countries. The last decade has seen the hottest temperatures since humans began recording temperatures around 150 years ago. Climate change threatens to destroy our path towards sustainable development, a global financial crisis has shaken the planet?s economic foundations, and a global food crisis has brought suffering and unrest. Perhaps most worrvingly, the global political will to address the structural and root causes of	Office of the High Commissioner for Human Rights (OHCHR)	
Sustainable city, a concrete utopia	19/06/2012	15:30:00	P3-6 (Riocentro)	Sub headlines: How to govern and administrate the cities of tomorrow? This conference focuses on the challenges that urbanisation pose to environment and the way our cities will be adapting to climate change. Urban organisation will have to be re thought totally. In this respect, the role of different stakeholders is likely to be changing. The conference will feature elected people, technical experts, enterprises and other organisations. The debate will be followed by the signature of a cooperation agreement between the City of Montpellier and Rio City Council. The Club France Rio+20 proposes to examine how city stakeholders (local authorities, enterprises, associations) are tackling these new challenges. How to plan a sustainable city, while its concept itself is still to be defined? What are the priorities? How to design projects that conciliate foresight, transversality and global vision? Which tools can be used by developers? How are the responsibilities shared in the process of change?		
Bio-economy and development. Beyond the crisis, a New World	19/06/2012	15:30:00	T-11 (Riocentro)	Bio-economy is an environmental and economic theory and practice by which you can proceed towards a new ecological and social development. With bio-economy you can define new areas of research and develop new programs for an appropriate use of natural, biological and renewable resources to overcome poverty and produce safe and wholesome food, but also materials, energy and other products. In this regard, we propose to launch a bio-economy strategy in view of the world's population increase (up to 9 billion inhabitants in 2050) and the scarcity of natural resources.	COBASE ? Cooperativa Tecnico Scientifica di Base	

Business Taking the Lead: Meeting the Challenge of Sustainable Energy	19/06/2012	15:30:00	T-8 (Riocentro)	How do we achieve universal access to modern energy services, double the rate of improvement in energy efficiency and double the share of renewable energy in the global energy mix? Companies in the renewable energy, energy efficiency and natural gas sectors can deliver the technology solutions that will help countries achieve the vision of the UN Secretary General?s Sustainable Energy for All. This panel of private sector executives will discuss: ? What policy incentives will ensure a greater access to clean energy? ? Where does public sector finance best leverage and unlock private sector investments? ? What partnership opportunities can the clean energy business community offer at Rio ? to improve the energy efficiency of our building stock? To expand energy access through renewable and distributed forms of energy? To deploy smarter technologies to better connect our communities?	Business Council for Sustainable Energy (BCSE)	
Putting Green Economy into practice	19/06/2012	15:30:00	P3-B (Riocentro)	Switzerland has proposed an international Green Economy Roadmap as an outcome of the Rio+20 Conference. The side event will illustrate how Green Economy can benefit both developed and devel-oping countries and share some practical experiences of policies and instruments for assisting the transformation towards a green economy. The first example shares some success stories in promoting the development and implementation of Sustainable Public Procurement (SPP) through the Marrakech Task Force on SPP and gives an outlook on how the work will be continued under the lead of UNEP. The second example provides lessons from the longstanding collaboration of Switzerland with UNIDO and UNEP in establishing a network of Cleaner Production Centers in developing countries which has facilitated the transfer of know-how and technology for improving production processes and resource efficiency. The last example will address the issue of sustainable agriculture and the necessity of land tenure rights.	Switzerland	
Mexico's contribution to sustainable development	19/06/2012	15:30:00	T-9 (Riocentro)	Environment is a priority in the national agenda. We are investing human and economic resources to make the difference in different issues. It is our interest to share with the international community some progresses to reach by this Ministry and other involved actors in specific issues such as: ? Climate change ? Water ? Food security ? Short- lived climate forcers	National Water Commission	
Pacific islands: Applying the green economy in a blue world	19/06/2012	15:30:00	T-10 (Riocentro)	This side event discusses the Pacific Regional Oceans Policy and the Pacific Oceanscape Framework for implementing the ocean policy. It highlights the challenges for small islands in managing the Planet?s biggest resource ? the Pacific Ocean - not only for themselves but for the whole global community; and, in particular, raises the special case of small islands in terms of their vulnerabilities, location, size, remoteness and capacities. The special case for SIDS is well established since the initial UNCED. However, despite significant progress, the factors that make SIDS a special case in achieving sustainable development remain. We need to examine how we can retain and manage this special case through the evolving institutional framework for sustainable development to ensure that SIDS needs are accommodated and the modalities for implementation appropriate to their special context.	Secretariat of the Pacific Regional Environment Programme (SPREP)	
Defying Disasters: A Tri-Continental South-South Dialogue	19/06/2012	15:30:00	T-6 (Riocentro)	Philippines, Kenya and Colombia have joined forces through their public and civil society sectors, to address the pressing issues of disaster mitigation, adaptation and risk management as a novel example of South-South Cooperation. The ultimate goal is to replicate solutions to problems to other countries in three continents of developing world. The process known as ?Cartagena Dialogues? hopes to assist response to disasters so that resources can be utilized for sustainable development purposes instead of diverting them to respond and recover from disasters. This Cartagena dialogue addresses the key issues on the UNCSD agenda of making some of the poorest communities, including countries with largest number of displaced people and of refugees, more resilient to disasters. Special emphasis is paid on the role of local authorities, use of indigenous techniques, creative cultural communications and strengthening of financial mechanisms to generate some resources at local level for immediate response to disasters.	Philippines

Programa Águas Limpas, o maior investimento em saneamento da história do Espírito Santo	19/06/2012	17:00:00	Parque dos Atletas	A Companhia Espírito Santense de Saneamento (Cesan) está presente em 52 municípios, atingindo 2,2 milhões de pessoas. Em nove anos – de 2003 a 2011 - os investimentos superaram R$ 1,3 bilhão em obras de abastecimento de água e esgotamento sanitário. Com a conclusão das obras do Programa Águas Limpas, serão 80 mil ligações de esgoto disponíveis a partir de meados deste ano, atingindo a cobertura de 60% de esgoto tratado, com a construção de 1.640 quilômetros de redes até 2012. Isso fará com que o Espírito Santo fique muito acima da média do Brasil, entre os cinco estados com melhores índices e com planos e projetos para continuar buscando os 100% previstos no Plano Estratégico 2025. As obras do Programa Águas Limpas farão de Vitória a primeira Capital a ter 100% do esgoto tratado. Evento aberto ao público. Green economy and inclusive growth for a sustainable future	19/06/2012	17:30:00	T-10 (Riocentro)	The event ?Green economy and inclusive growth for a sustainable future? is focused at discussing the key elements of green growth from various perspectives and contributing further to the existing knowledge on the concept of green growth, since the concept is still evolving and there is no clearly agreed upon definition of a green economy. The event would, through a framing presentation on ?Roadmap for transitioning India towards a green economy?, focus on issues relevant for India for transitioning towards a green economy. The challenges confronting the Indian economy in ensuring rapid and inclusive growth are several ? be they in terms of constraints related to land, water or energy availability, access to appropriate technologies, adequate finance, requisite capacities and skill sets. The presentation would be followed by a discussion on both developed and developing country perspectives around key issues, enabling frameworks and mechanisms necessary to accelerate green growth globally.	Energy and Resources Institute (TERI)	

NATURE BASED SOLUTIONS FOR A SUSTAINABLE FUTURE	19/06/2012	17:30:00	P3-E (Riocentro)	Since the Rio 1992 Earth Summit, there has been much progress in the field of socio-economic development. However, the world has also witnessed a drastic rise in social inequalities and environmental degradation as well as biodiversity loss resulting from continuous unsustainable economic models. In addition, inadequate governance systems as well as lack of implementation of international obligations related to sustainable development and of various environmental agreements jeopardize the achievement of sustainable development. The UNCSD will address economic, social and environmental dimensions of implementation of the sustainable development framework. To tackle this challenge, two overarching themes have been defined, namely, Green Economy in the context of Sustainable Development and Poverty Eradication; and Institutional Framework for Sustainable Development. IUCN works with many partners in projects that put nature at the centre of strategies and action plans to improve the quality of life using a people-centred approach and fair distribution of resources. The UNCSD is an opportunity to share lessons learned and discuss strategies for scaling up	International Union for Conservation of Nature (IUCN)	
Towards Sustainable Food Security in the Sahel	19/06/2012	17:30:00	T-9 (Riocentro)	The objetcives of the side event are: To present the report on the implementation of Agenda 21 by Niger: progresses made and challenges -To present a comprehensive approach to achieve sustainable development, especially with regards to food security : the 3N Initiative Contribution to the Conference - Presentation of an example of implementation of Agenda 21 in one of the most vulnerable countries - Presentation of a comprehensive approach taken by a developing country to achieve sustainable development, in particular through tackling the issue of food insecurity. This approach is a response to the emerging challenges of food crises, adaptation to climate change, access to water, among others	Niger	
High Level Policy Forum on Development of Framework for Green Economy	19/06/2012	17:30:00	P3-A (Riocentro)	The side event titled ?High Level Policy Forum on Development of Framework for Green Economy? aims to identify key challenges toward green economy and explore possible policy frameworks to promote green economy with the high-level policy makers. The side event will provide a good chance to policy makers and key stakeholders to enhance awareness of challenges and opportunities in green economy, possible policy options to shift conventional resource-intensive economic structure towards green economy, specifically in the key sectors of sustainable consumption and production (SCP) patterns, resource efficiency and green infrastructure. Through this event, participants will share policy experiences of countries in different circumstances and seek policy frameworks to promote green economy beyond Rio+20.	Republic of Korea	
Green energy for a green economy	19/06/2012	17:30:00	T-5 (Riocentro)	It is well known that developing sustainable energy resources are important for social and economic development as well as to promote low-carbon and resilient societies. In order to implement sustainable energy policies it is essential to monitor the effectiveness of these national policies and identify areas for improvement, taking into consideration social, economic, environmental, technology and governance issues. It is also essential to base large-scale implementation with good plans and practices. This side event will present a toolbox of methodologies and indicators that can be used to monitor progress and highlight both development and investment opportunities in the energy sector to support the growth of a green economy. It will also show good practices in strategies and practices in transition to green energy. Examples of recent pilot studies will be presented.	HELIO International	

Civil Society and Knowledge Community: Dialogues around IFSD	19/06/2012	17:30:00	P-3 (Riocentro)	The event has the objective to stimulate discussion on the role of civil society organizations (CSOs) and knowledge community in the context of the second theme of UNCSD-institutional framework for sustainable development (IFSD). It will try to harness in best possible manner the diverse knowledge and experience of the participants, accommodating different opinions and interests and providing the tools and the space for productive brainstorming of future role and direction of CSOs. The role of CSOs exists at all levels ? international, regional, national, sub-national and local ? and may be increasingly mobilized and organized through innovative methods. So far, partnerships registered with the Commission on Sustainable Development have been limited in terms of geographical scope showing a lack of visibility of local initiatives. Yet, undeniably, many innovations start at the local level and there is renewed attention to scaling up local development innovations and mainstream key lessons learnt.	Asian Energy Institute	
New ways to build a more sustainable production and consumption model	19/06/2012	17:30:00	UN6 (Barra Arena)	Considering that one of the key topics of Rio+20 is the transition to Green Economy, a model that provides for human wellbeing and social equality while at the same time significantly reduces the environmental risks and ecological scarcity, this is an opportune moment to reflect on the necessary changes in the consumption and production methods. In this context, Akatu Institute, in partnership with Pão de Açúcar Group, proposes a workshop that will bring together private enterprise, civil society and governments to help publicly launch 10 ways to build more sustainable consumption and production methods. Based on this benchmark, the participants will work to jointly create more sustainable business models, and also identify the necessary conditions for their implementation, considering the changes in consumer behavior, public policies and civil society actions that must support the consolidation of the business.	Akatu Institute	
New Generation Leaders Unite HIV and Environment for Sustainability	19/06/2012	17:30:00	T-6 (Riocentro)	This highly interactive event will be developed by and for young people (YP). It will feature YP?s growing exposure to and interest in world affairs due to ICT, and their ability to connect and collaborate to shape their futures, unencumbered by sectoral identities and interests. It will advance the SG?s agenda on youth, and complement the Youth Blast by its focus on innovative ICT approaches such as crowdsourcing, mutual accountability, and its grounding in lessons learned from the AIDS movement. This session will catalyse new partnerships to join the passion and knowledge of the HIV, global health and environment movements, with practical ways to work together at country level. These partnerships will intensify progress toward the MDGs, and build political support and capacity for delivering the UN Post-2015 development agenda. It will strengthen YP?s engagement and add zest to the Institutional Framework for Sustainable Development theme.	Joint United Nations Programme on HIV/AIDS (UNAIDS)

Towards Sustainable Food Security in the Sahel	19/06/2012	17:30:00	T-9 (Riocentro)	The objetcives of the side event are: To present the report on the implementation of Agenda 21 by Niger: progresses made and challenges -To present a comprehensive approach to achieve sustainable development, especially with regards to food security : the 3N Initiative Contribution to the Conference - Presentation of an example of implementation of Agenda 21 in one of the most vulnerable countries - Presentation of a comprehensive approach taken by a developing country to achieve sustainable development, in particular through tackling the issue of food insecurity. This approach is a response to the emerging challenges of food crises, adaptation to climate change, access to water, among others.	Niger	
High Level Policy Forum on Development of Framework for Green Economy	19/06/2012	17:30:00	P3-A (Riocentro)	The side event titled ?High Level Policy Forum on Development of Framework for Green Economy? aims to identify key challenges toward green economy and explore possible policy frameworks to promote green economy with the high-level policy makers. The side event will provide a good chance to policy makers and key stakeholders to enhance awareness of challenges and opportunities in green economy, possible policy options to shift conventional resource-intensive economic structure towards green economy, specifically in the key sectors of sustainable consumption and production (SCP) patterns, resource efficiency and green infrastructure. Through this event, participants will share policy experiences of countries in different circumstances and seek policy frameworks to promote green economy beyond Rio+20.	Republic of Korea	
Green energy for a green economy	19/06/2012	17:30:00	T-5 (Riocentro)	It is well known that developing sustainable energy resources are important for social and economic development as well as to promote low-carbon and resilient societies. In order to implement sustainable energy policies it is essential to monitor the effectiveness of these national policies and identify areas for improvement, taking into consideration social, economic, environmental, technology and governance issues. It is also essential to base large-scale implementation with good plans and practices. This side event will present a toolbox of methodologies and indicators that can be used to monitor progress and highlight both development and investment opportunities in the energy sector to support the growth of a green economy. It will also show good practices in strategies and practices in transition to green energy. Examples of recent pilot studies will be presented.	HELIO International	
Civil Society and Knowledge Community: Dialogues around IFSD	19/06/2012	17:30:00	P-3 (Riocentro)	The event has the objective to stimulate discussion on the role of civil society organizations (CSOs) and knowledge community in the context of the second theme of UNCSD-institutional framework for sustainable development (IFSD). It will try to harness in best possible manner the diverse knowledge and experience of the participants, accommodating different opinions and interests and providing the tools and the space for productive brainstorming of future role and direction of CSOs. The role of CSOs exists at all levels ? international, regional, national, sub-national and local ? and may be increasingly mobilized and organized through innovative methods. So far, partnerships registered with the Commission on Sustainable Development have been limited in terms of geographical scope showing a lack of visibility of local initiatives. Yet, undeniably, many innovations start at the local level and there is renewed attention to scaling up local development innovations and mainstream key lessons learnt.	Asian Energy Institute	
New Generation Leaders Unite HIV and Environment for Sustainability	19/06/2012	17:30:00	T-6 (Riocentro)	This highly interactive event will be developed by and for young people (YP). It will feature YP?s growing exposure to and interest in world affairs due to ICT, and their ability to connect and collaborate to shape their futures, unencumbered by sectoral identities and interests. It will advance the SG?s agenda on youth, and complement the Youth Blast by its focus on innovative ICT approaches such as crowdsourcing, mutual accountability, and its grounding in lessons learned from the AIDS movement. This session will catalyse new partnerships to join the passion and knowledge of the HIV, global health and environment movements, with practical ways to work together at country level. These partnerships will intensify progress toward the MDGs, and build political support and capacity for delivering the UN Post-2015 development agenda. It will strengthen YP?s engagement and add zest to the Institutional Framework for Sustainable Development theme.	Joint United Nations Programme on HIV/AIDS (UNAIDS)	
UN-Water Day (part 2)	19/06/2012	17:30:00	P3-6 (Riocentro)		UN-Water	

Green economy and inclusive growth for a sustainable future	19/06/2012	17:30:00	T-10 (Riocentro)	The event ?Green economy and inclusive growth for a sustainable future? is focused at discussing the key elements of green growth from various perspectives and contributing further to the existing knowledge on the concept of green growth, since the concept is still evolving and there is no clearly agreed upon definition of a green economy. The event would, through a framing presentation on ?Roadmap for transitioning India towards a green economy?, focus on issues relevant for India for transitioning towards a green economy. The challenges confronting the Indian economy in ensuring rapid and inclusive growth are several ? be they in terms of constraints related to land, water or energy availability, access to appropriate technologies, adequate finance, requisite capacities and skill sets. The presentation would be followed by a discussion on both developed and developing country perspectives around key issues, enabling frameworks and mechanisms necessary to accelerate green growth globally.	Energy and Resources Institute (TERI)	
NATURE BASED SOLUTIONS FOR A SUSTAINABLE FUTURE	19/06/2012	17:30:00	P3-E (Riocentro)	Since the Rio 1992 Earth Summit, there has been much progress in the field of socio-economic development. However, the world has also witnessed a drastic rise in social inequalities and environmental degradation as well as biodiversity loss resulting from continuous unsustainable economic models. In addition, inadequate governance systems as well as lack of implementation of international obligations related to sustainable development and of various environmental agreements jeopardize the achievement of sustainable development. The UNCSD will address economic, social and environmental dimensions of implementation of the sustainable development framework. To tackle this challenge, two overarching themes have been defined, namely, Green Economy in the context of Sustainable Development and Poverty Eradication; and Institutional Framework for Sustainable Development. IUCN works with many partners in projects that put nature at the centre of strategies and action plans to improve the quality of life using a people-centred approach and fair distribution of resources. The UNCSD is an opportunity to share lessons learned and discuss strategies for scaling up	International Union for Conservation of Nature (IUCN)

A Place for Climate Vulnerability in the Rio Agenda	19/06/2012	19:30:00	T-9 (Riocentro)	An international response to the threat of climate change and the UN Framework Convention on Climate Change (UNFCCC) were key outcomes of the first Rio conference in 1992. Since then, climate change has intensified, and international action has yet to rise to the challenge of an adequate response. Science also indicates that further, accelerated warming over the next 20-30 years is inevitable due to the inertia of the climate system. Rio+20 marks the starting point of a process to develop new global targets for international development to succeed the Millennium Development Goals (MDGs). However, disproportionate vulnerability to effects brought about through climate change has created a major impediment for several of the world?s poorest groups in attaining the MDGs by 2015. Just two examples of impact areas, biodiversity and desertification, also core pillars of the original Rio agenda, highlight the dangers of climate change for sustainable development, since lower-income groups are in general more dependent on ecosystems and more prevalent in the world?s arid regions. By the time any new global goals on sustainable development would be nearing their own deadlines, greater degrees of climate change would have a correspondingly more comprehensive detrimental effect on poverty reduction and environmental protection efforts. Reducing vulnerability to climate change therefore constitutes a factor of growing significance	DARA International	

Urban an subnational territories:key elements of a sustainable future	19/06/2012	19:30:00	T-3 (Riocentro)	At a moment where half of humanity lives and works in cities around the world and where previsions expect this proportion to increase to 70% by 2050, the role of urban governance and sub-national levels of governments in the global agenda is becoming increasingly important. Given the need to go beyond clusters and sectoral approaches, local and subnational authorities are calling for a more human centered debate and for an integrated framework to assessing sustainable development. Local and regional authorities as the closest level of government to the people can play a pivotal role in bringing all actors together and linking up all levels of governance: local, subnational, national and international to build new models of governance and a more equitable and sustainable development for all. International and national strategies for sustainable development should take into account local realities and trends with the active assistance of local governments.	United Cities and Local Governments	
The Global Transition to a New Economy- mapping a green and fair world	19/06/2012	19:30:00	P3-F (Riocentro)	The presentation will provide a vision of what a green and fair economy may look like, in different contexts, around the world. In particular, the presentation will include the launch of the Global Transition to a New Economy map (please see www.gtne.org). Gus Speth will provide a keynote speech on what an economy that delivers on social justice and operates within environmental limits looks like in the United States.	The New Economics Institute	
Building Ecocities - Geodesign and Citizen Participation	19/06/2012	19:30:00	P3-B (Riocentro)	Urbanization has been identified by the United Nations Environment Programme (UNEP) as one of the top environmental issues of the 21st Century. Given the environmental changes associated with Climate Change and the vulnerability of urban areas, urban resilience is a key component of overall sustainability. Ecocity principles, tied to citizen participation and multidisciplinary sustainable development frameworks and networks, can produce quantifiable benefits to cities and citizens, often reducing or eliminating the need for more expensive urban infrastructure interventions while simultaneously boosting community health and economic resilience. We will demonstrate how the use of next generation web technologies, cloud computing, global information systems and large scale knowledge-bases can increase and amplify efficiency and resilience, as well as boost citizen participation, to conceive a new, more public infrastructure ?a robust network of urban interventions with tangible benefits to the health and well-being of every citizen.	Ecocity Builders	
Occupy nature	19/06/2012	19:30:00	T-11 (Riocentro)	Justice first! All environmental interventions must promote justice! Rights, Recourse, Representation! Nature belongs to everyone.	ENDA Tiers Monde	
Oceans at Rio+20: Toward Implementation of the Rio Ocean Commitments	19/06/2012	19:30:00	P3-A (Riocentro)	Oceans, coasts, and small island developing States (SIDS) have taken a prominent role in the Rio+20 discussions and will likely factor centrally into the Rio+20 outcome. States, intergovernmental organizations, and civil society have voiced strong support for addressing ocean issues and supporting the role of oceans and coasts in achieving sustainable development goals. Many in the global community have also stressed the need to continue to work towards previously unfulfilled global commitments on oceans, coasts, and SIDS. This event will address perspectives of States, UN-agencies and civil society on the Rio+20 outcome, host discussions on how to reach a strong oceans outcome (including a viable implementation framework for Rio+20 commitments), and will also serve as a follow-up to the high-level oceans event, "Advancing Oceans and Coasts at Rio+20 and Beyond" (scheduled for June 16), and the thematic oceans half-day organized by the Brazilian government and the Rio+20 Executive Coordinators.	International Coastal and Ocean Organization, Secretariat of the Global Ocean Forum	
The Global Atlas for Solar and Wind Energy	19/06/2012	19:30:00	T-10 (Riocentro)	What share or one?s country energy mix can be supplied by renewable energy? Where are the resources located? What is the most cost-effective combination of technologies? What volume of investments does it represent, and is there a market large enough for creating a supply chain? Assessing renewable energy resources is a first step for answering those questions, and eventually creating a market environment for deploying renewable energy investments. This first step requires large upfront investments in measurement campaigns, and a high level of technical knowledge. For countries willing to exploit their national resources, the IRENA Global Atlas programme provides the initial elements to investigate renewable energy potentials, before initiating detailed national investigations and building human capacities.	International Renewable Energy Agency (IRENA)	

The human being: the core of a sustainable city	19/06/2012	19:30:00	P3-E (Riocentro)	Education, employment and social inclusion of new generations are recognized as essential components for sustainable cities. The focus on the development of each single person, his/her family and community is key to foster the active protagonism of city dwellers, their associations and institutions, which, along with the private sector, are essential for city planning and development. These are the main lessons we propose to share at the side-event, derived from the innovative multi-year and multi-stakeholder partnership in an integrated urban development intervention in Brazil involving local and national Governments (Bahia State , Ministry of Cities), international donors (Government of Italy, World Bank) , local CSOs and Institutions, international NGOs (AVSI Foundation) and Cities Alliance. The quality of the results and of the partnership has now spurred Brazil, Italy, and Cities Alliance to associate with Mozambique in an urban upgrading project in Maputo, inspired and guided by the Bahia approach.	AVSi Foundation	
Speak Truth to Power: Listening to the demands of future generations	19/06/2012	19:30:00	T-4 (Riocentro)	Throughout history, young people have been the drivers of change, often standing up for what?s right in direct opposition to the established norm. From organised struggles for democracy and civil liberties, to peaceful protests calling for new economic ideals, youth voices have transformed the socio-political landscape of the 21st century. Now, with the future of life on Earth at stake, the Rio+20 United Nations Conference on Sustainable Development calls out for young people across the world to lead the charge and we have brought some of the most prominent voices together to speak truth to power and make their voice heard to those that can influence the outcome of Rio+20 and ensure that young people have the future they want and deserve.	Global Campaign for Climate Action (GCCA)	
Biotechnology and Sustainable Agriculture and Food Security	19/06/2012	19:30:00	T-9 (Riocentro)	The world is facing very daunting challenges. Over 1 billion people are malnourished, often resultingin chronic diseases and premature deaths. Agriculture burdens the environment through pesticides,fertilizers, irrigation, ploughing and conversion of natural habitats. This situation will be compoundedby the further growth of the world population. By 2050 the world will have to produce 60-70% morefood, feed, fibre and biomass on a smaller agricultural area and under the stress of climate change. Farmers will have to produce more with less impact on the environment. In other words, to increase yieldper hectare, to make better use of water, to be less dependent on pesticides and fertilisers, to enhance nutritional value, etc. As was already recognised in the Earth Summit in 1992, this immense challenge cannot be solved by conventional approaches alone, but requires the involvement of new technologies such as modern biotechnology.	Public Research and Regulation Initiative (PRRI)	
Voices from Europe: Build a Living Economy	19/06/2012	19:30:00	T-6 (Riocentro)	This event explores the road towards sustainable prosperity by various means. Voices from Europe will debate and present research results on green economy and policy advices for Rio+20. These voices represent businesses, NGOs and intellectuals from Europe. To reach a broad audience, the advices from Europe will be communicated using different media, including scientific presentations, video, art and music that will be integral to the event supporting and strengthen key policy advices.	Worldwatch Institute	
Trends and Conflicts in the Extractives Sector: Designing Public Policy for a More Sustainable Future	19/06/2012	19:30:00	T-5 (Riocentro)	The real and perceived social and environmental impacts of extractive industries are today presenting a monumental global challenge, to balance sustainable growth, with the inevitable depletion and massive use of natural resources, all of this while attempting to guarantee a safe and healthy environment for affected communities and other stakeholders. Governments receiving much of the global investment occurring today for mining prospecting and extraction, have in many cases shown that they are unprepared from a policy and management perspective to tackle the challenges of providing socially and environmentally effective investment frameworks, proper policy guidance, monitoring systems, or reporting mechanisms to ensure a more sustainable approach to mining. Mining companies meanwhile, have made a strong push to offer Corporate Social Responsibility-type responses to concerned stakeholders in local communities.	CEDHA (Centro de Derechos Humanos y Ambiente)	
Water and food security: How to reduce vulnerabilities and empower	19/06/2012	19:30:00	T-8 (Riocentro)	The rights to water and food are basic human rights and key issues to be taken into account when aspiring to achieve tangible results for green economies in the context of poverty eradication and in setting the Sustainable Development Goals. The panel discussion stimulates the debate by offering a variety of perspectives that illustrate the importance of mainstreaming inclusive multi-stakeholder cooperation into all actions both at national and international level. The panel focuses on examples, which illustrate how to increase policy coherence and cross-sectoral cooperation as well as the influence of marginalized groups in dealing with the linkages between food security and the management of fresh water and marine resources.	United Nations Association Finland

Since then, climate change has intensified, and international action has yet to rise to the challenge of an adequate response. Science also indicates that further, accelerated warming over the next 20-30 years is inevitable due to the inertia of the climate system. Rio+20 marks the starting point of a process to develop new global targets for international development to succeed the Millennium Development Goals (MDGs). However, disproportionate vulnerability to effects brought about through climate change has created a major impediment for several of the world?s poorest groups in attaining the MDGs by 2015. Just two examples of impact areas, biodiversity and desertification, also core pillars of the original Rio agenda, highlight the dangers of climate change for sustainable development, since lower-income groups are in general more dependent on ecosystems and more prevalent in the world?s arid regions. By the time any new global goals on sustainable development would be nearing their own deadlines, greater degrees of climate change would have a correspondingly more comprehensive detrimental effect on poverty reduction and environmental protection efforts. Reducing vulnerability to climate change therefore constitutes a factor of growing significance	DARA International	
Urban an subnational territories:key elements of a sustainable future	19/06/2012	19:30:00	T-3 (Riocentro)	At a moment where half of humanity lives and works in cities around the world and where previsions expect this proportion to increase to 70% by 2050, the role of urban governance and sub-national levels of governments in the global agenda is becoming increasingly important. Given the need to go beyond clusters and sectoral approaches, local and subnational authorities are calling for a more human centered debate and for an integrated framework to assessing sustainable development. Local and regional authorities as the closest level of government to the people can play a pivotal role in bringing all actors together and linking up all levels of governance: local, subnational, national and international to build new models of governance and a more equitable and sustainable development for all. International and national strategies for sustainable development should take into account local realities and trends with the active assistance of local governments	United Cities and Local Governments	
The Global Transition to a New Economy- mapping a green and fair world	19/06/2012	19:30:00	P3-F (Riocentro)	The presentation will provide a vision of what a green and fair economy may look like, in different contexts, around the world. In particular, the presentation will include the launch of the Global Transition to a New Economy map (please see www.gtne.org). Gus Speth will provide a keynote speech on what an economy that delivers on social justice and operates within environmental limits looks like in the United States.	The New Economics Institute	

Building Ecocities - Geodesign and Citizen Participation	19/06/2012	19:30:00	P3-B (Riocentro)	Urbanization has been identified by the United Nations Environment Programme (UNEP) as one of the top environmental issues of the 21st Century. Given the environmental changes associated with Climate Change and the vulnerability of urban areas, urban resilience is a key component of overall sustainability. Ecocity principles, tied to citizen participation and multidisciplinary sustainable development frameworks and networks, can produce quantifiable benefits to cities and citizens, often reducing or eliminating the need for more expensive urban infrastructure interventions while simultaneously boosting community health and economic resilience. We will demonstrate how the use of next generation web technologies, cloud computing, global information systems and large scale knowledge-bases can increase and amplify efficiency and resilience, as well as boost citizen participation, to conceive a new, more public infrastructure ?a robust network of urban interventions with tangible benefits to the health and well-being of every citizen.	Ecocity Builders	
Occupy nature	19/06/2012	19:30:00	T-11 (Riocentro)	Justice first! All environmental interventions must promote justice! Rights, Recourse, Representation! Nature belongs to everyone.	ENDA Tiers Monde	
Oceans at Rio+20: Toward Implementation of the Rio Ocean Commitments	19/06/2012	19:30:00	P3-A (Riocentro)	Oceans, coasts, and small island developing States (SIDS) have taken a prominent role in the Rio+20 discussions and will likely factor centrally into the Rio+20 outcome. States, intergovernmental organizations, and civil society have voiced strong support for addressing ocean issues and supporting the role of oceans and coasts in achieving sustainable development goals. Many in the global community have also stressed the need to continue to work towards previously unfulfilled global commitments on oceans, coasts, and SIDS. This event will address perspectives of States, UN-agencies and civil society on the Rio+20 outcome, host discussions on how to reach a strong oceans outcome (including a viable implementation framework for Rio+20 commitments), and will also serve as a follow-up to the high-level oceans event, "Advancing Oceans and Coasts at Rio+20 and Beyond" (scheduled for June 16), and the thematic oceans half-day organized by the Brazilian government and the Rio+20 Executive Coordinators.	International Coastal and Ocean Organization, Secretariat of the Global Ocean Forum	
The Global Atlas for Solar and Wind Energy	19/06/2012	19:30:00	T-10 (Riocentro)	What share or one?s country energy mix can be supplied by renewable energy? Where are the resources located? What is the most cost-effective combination of technologies? What volume of investments does it represent, and is there a market large enough for creating a supply chain? Assessing renewable energy resources is a first step for answering those questions, and eventually creating a market environment for deploying renewable energy investments. This first step requires large upfront investments in measurement campaigns, and a high level of technical knowledge. For countries willing to exploit their national resources, the IRENA Global Atlas programme provides the initial elements to investigate renewable energy potentials, before initiating detailed national investigations and building human capacities.	International Renewable Energy Agency (IRENA)	
The human being: the core of a sustainable city	19/06/2012	19:30:00	P3-E (Riocentro)	Education, employment and social inclusion of new generations are recognized as essential components for sustainable cities. The focus on the development of each single person, his/her family and community is key to foster the active protagonism of city dwellers, their associations and institutions, which, along with the private sector, are essential for city planning and development. These are the main lessons we propose to share at the side-event, derived from the innovative multi-year and multi-stakeholder partnership in an integrated urban development intervention in Brazil involving local and national Governments (Bahia State , Ministry of Cities), international donors (Government of Italy, World Bank) , local CSOs and Institutions, international NGOs (AVSI Foundation) and Cities Alliance. The quality of the results and of the partnership has now spurred Brazil, Italy, and Cities Alliance to associate with Mozambique in an urban upgrading project in Maputo, inspired and guided by the Bahia approach.	AVSi Foundation	

Speak Truth to Power: Listening to the demands of future generations	19/06/2012	19:30:00	T-4 (Riocentro)	Throughout history, young people have been the drivers of change, often standing up for what?s right in direct opposition to the established norm. From organised struggles for democracy and civil liberties, to peaceful protests calling for new economic ideals, youth voices have transformed the socio-political landscape of the 21st century. Now, with the future of life on Earth at stake, the Rio+20 United Nations Conference on Sustainable Development calls out for young people across the world to lead the charge and we have brought some of the most prominent voices together to speak truth to power and make their voice heard to those that can influence the outcome of Rio+20 and ensure that young people have the future they want and deserve.	Global Campaign for Climate Action (GCCA)	
Biotechnology and Sustainable Agriculture and Food Security	19/06/2012	19:30:00	T-9 (Riocentro)	The world is facing very daunting challenges. Over 1 billion people are malnourished, often resultingin chronic diseases and premature deaths. Agriculture burdens the environment through pesticides,fertilizers, irrigation, ploughing and conversion of natural habitats. This situation will be compoundedby the further growth of the world population. By 2050 the world will have to produce 60-70% morefood, feed, fibre and biomass on a smaller agricultural area and under the stress of climate change. Farmers will have to produce more with less impact on the environment. In other words, to increase yieldper hectare, to make better use of water, to be less dependent on pesticides and fertilisers, to enhance nutritional value, etc. As was already recognised in the Earth Summit in 1992, this immense challenge cannot be solved by conventional approaches alone, but requires the involvement of new technologies such as modern biotechnology.	Public Research and Regulation Initiative (PRRI)	
Voices from Europe: Build a Living Economy	19/06/2012	19:30:00	T-6 (Riocentro)	This event explores the road towards sustainable prosperity by various means. Voices from Europe will debate and present research results on green economy and policy advices for Rio+20. These voices represent businesses, NGOs and intellectuals from Europe. To reach a broad audience, the advices from Europe will be communicated using different media, including scientific presentations, video, art and music that will be integral to the event supporting and strengthen key policy advices.	Worldwatch Institute	
Trends and Conflicts in the Extractives Sector: Designing Public Policy for a More Sustainable Future	19/06/2012	19:30:00	T-5 (Riocentro)	The real and perceived social and environmental impacts of extractive industries are today presenting a monumental global challenge, to balance sustainable growth, with the inevitable depletion and massive use of natural resources, all of this while attempting to guarantee a safe and healthy environment for affected communities and other stakeholders. Governments receiving much of the global investment occurring today for mining prospecting and extraction, have in many cases shown that they are unprepared from a policy and management perspective to tackle the challenges of providing socially and environmentally effective investment frameworks, proper policy guidance, monitoring systems, or reporting mechanisms to ensure a more sustainable approach to mining. Mining companies meanwhile, have made a strong push to offer Corporate Social Responsibility-type responses to concerned stakeholders in local communities.	CEDHA (Centro de Derechos Humanos y Ambiente)	
Water and food security: How to reduce vulnerabilities and empower	19/06/2012	19:30:00	T-8 (Riocentro)	The rights to water and food are basic human rights and key issues to be taken into account when aspiring to achieve tangible results for green economies in the context of poverty eradication and in setting the Sustainable Development Goals. The panel discussion stimulates the debate by offering a variety of perspectives that illustrate the importance of mainstreaming inclusive multi-stakeholder cooperation into all actions both at national and international level. The panel focuses on examples, which illustrate how to increase policy coherence and cross-sectoral cooperation as well as the influence of marginalized groups in dealing with the linkages between food security and the management of fresh water and marine resources. POLÍTICAS INOVADORAS PARA O INVESTIMENTO RESPONSÁVEL	20/06/2012	8:30:00	BNDES	Vem crescendo internacionalmente o debate sobre a adoção de critérios de responsabilidade social e sustentabilidade ambiental na realização de investimentos públicos e privados, tendo em vista o impacto que esses investimentos promovem na configuração da realidade econômica e social de locais, países e regiões. No caso do Brasil, em que estão sendo realizados grandes investimentos em infraestrutura e na realização de eventos esportivos, coloca-se a questão de integrar esses investimentos ao esforço de uso sustentável dos recursos naturais e combate estrutural à pobreza e às desigualdades sociais e regionais. O Investimento Responsável (Impact Investing) – prática do investimento com retorno financeiro acrescido de benefícios sociais e ambientais – pode oferecer aos gestores públicos e aos investidores um poderoso mecanismo para a promoção do bem comum. Esse tipo de política já direcionou bilhões de dólares para projetos ambientais e sociais em diferentes países no mundo. O BNDES tem o prazer de sediar esse importante evento, em conjunto com a UNISOL Brasil e com apoio da Fundação Rockefeller. O evento também marca o lançamento do "Impact Investing Policy Collaborative", uma rede internacional de	Fundação Rockfeller, Rede Unitrabalho e UNISOL	
5 Menos que são Mais.	20/06/2012	9:00:00	Aterro do Flamengo	A palestra tem o objetivo de quebrar o paradigma que relaciona ganhos ambientais e econômicos nas MPE com altos custos ou investimentos nas empresas.	Palestrante: Catharina Cavalcante de Macedo	SEBRAE
Resíduos Sólidos como Vantagem Competitiva	20/06/2012	9:00:00	Aterro do Flamengo	Uma das características mais marcantes da sociedade moderna é a urbanização e, como consequência, o incremento de resíduos sólidos. No Brasil, a destinação inadequada dos resíduos provoca um prejuízo de 8 bilhões de reais por ano ao enviar para os aterros sanitários materiais como celulose, plástico, vidro e alumínio a geração. Em resposta a este cenário, foi regulamentada a Lei nº 12.305 que institui a Política Nacional de Resíduos Sólidos e, logo, todas as empresas deverão atender às exigências, sob pena de arcar com as consequências legais.	Palestrantes: Ricardo Barros e Priscila Grimberg	SEBRAE
Eficiência Energética	20/06/2012	9:00:00	Aterro do Flamengo	Consultoria coletiva que pretende responder os questionamentos dos empresários em relação ao consumo de energia da sua empresa. ScenaRio 2012: 30,000 young voices for a sustainable future	20/06/2012	9:00:00	T-8 (Riocentro)	A unique initiative, ScenaRio 2012 will enable 30,000 young people and 100 personalities to share perspectives on the multiple issues linking the environment, development and governance. The ScenaRio 2012 team is currently consulting the world youth through a quantitative study covering 30 countries (including developing and least developed countries). In each country, 1,000 young citizens aged 16-29 will be consulted, representing the main socioeconomic characteristics of the national youth. In parallel, the ScenaRio 2012 team is also interviewing a panel of 100 personalities with a strong personal commitment towards sustainability issues. Specially created for the project, this panel includes opinion-makers from ten complementary spheres of influence (academia, business, culture, media, nonprofit, politics, spirituality, sports, UN and youth) and respects gender parity and geographic balance. ScenaRio 2012 has the official support of six UN Agencies and is a member of the UNCSD Major Group for Children and Youth.	United Nations Institute for Training and Research (UNITAR)	
UNCSD follow up: the role of parliaments	20/06/2012	9:00:00	T-10 (Riocentro)	A look at the legisaltive, oversight and representational role of parliaments as key actors to be engaged in the global re-think and accelerated action that are required to achieve sustainable development.	Inter-Parliamentary Union (IPU)	
The trade dimension in the follow-up to the Rio plus 20 Summit	20/06/2012	9:00:00	T-6 (Riocentro)	The emergence of greener economies has been the consequence of several drivers including, increasing regulatory and policy changes put in place to deal with negative externalities, difficulties faced in responding to ever increasing demands over natural and energy inputs, changes in consumption patterns, corporate responses to environmental and social considerations, as well as competitiveness, efficiency and image variables. In discussions leading the Rio+20 Conference, considerable political and negotiating efforts focused on the concerns that the green economy raises in trade contexts, for example: the emergence of green protectionist temptations and recent trade-related conflicts. Opportunities are seen in the trade of environmental goods and services, higher investment levels and in the emergence of greener sectors in both developed and developing countries, such as organic agriculture, biodiversity based production, ecotourism and clean energy generation. At the Rio+20 Summit, a shift in emphasis will start occurring from negotiations to the implementation of agreed outcomes. It is time to start exploring concrete proposals on innovative cooperation frameworks and capacity building initiatives by leading UN agencies and other assistance providers that will implement those outcomes.	United Nations Conference on Trade and Development (UNCTAD)	
Know our Ocean, Protect our Marine Treasures, Empower Ocean Citizens	20/06/2012	9:00:00	T-9 (Riocentro)	The ocean, our common heritage, covers over 70% of the globe?s surface. The ocean shapes Earth?s climate and influences the distribution of ecosystems, biodiversity, and thus food availability across the globe. This single, contiguous body of water is an absolutely essential component of human lives. Yet, despite the scientific research promoted via international cooperation over the past 50 years, the ocean remains relatively unexplored. Moving towards sustainable development of the ocean requires strengthening global scientific efforts to fully comprehend and protect coastal and marine environmental health, as well as to conserve biological diversity, and mitigate the impact of ocean threats. Sound ocean management requires developing the appropriate tools and mechanism to protect ocean resources, biodiversity and to sustain livelihoods that are compatible with healthy ecosystems. Finally, the transition towards such a blue-green approach will require a shift in human behavior which can only be instrumented through ocean education and awareness-raising leading to the emergence of a true ?ocean citizenship?.	Intergovernmental Oceanographic Commission (IOC)	
L'Economie Verte en Afrique : Experiences et Initiatives des Etats	20/06/2012	9:00:00	P3-E (Riocentro)	Ces dernières années, le Maroc ainsi que d?autres pays africains sont rentré dans le verdissement de leur économie. Plusieurs chantiers ont été d?ores et déjà lancés et visant à instaurer un développement durable. Le Side Event sera une occasion pour partager l?expérience de certains pays africains y compris le Maroc avec les délégations des autres pays et les organismes internationaux. A cet égard, le Side Event connaîtra la présentation des initiatives du développement durable et la projection des films et des reportages en relation avec l?économie verte et le Développement durable.	Morocco	

Social science support to policies promoting the social dimension of sustainable development in a changing climate	20/06/2012	9:00:00	P3-B (Riocentro)	The world is facing severe economic, social and environmental problems that are posing serious threats to sustainable development. Climate change alone can lead to a surge in social challenges such as reduced food production, reduced livelihoods and mass migration. While there has been increased recognition of the need for natural sciences to contribute to a knowledge base for informed policy decisions regarding prevention and mitigation of environmental and climate change, the role the social sciences can and should play in providing knowledge to society on the consequences of these inevitable changes have largely been down-played or even ignored. At the same time, the need for social science to contribute to sustainable development is recognized in chapter 35 of Agenda 21 and in the negotiations for the outcome document for ?Rio + 20?. There is a clear need for a better and more informed dialogue between social scientists and the decision-makers.	Norwegian National Commission for UNESCO	
Resilient Cities - Fostering Local Action for Sustainable Development	20/06/2012	9:00:00	T-1 (Riocentro)	Cities are home to half of the world?s population and in the coming years, this number is expected to grow by 70%. As engines of economic growth, innovation and job creation, cities play a pivotal role for sustainable development to be realized. Cities have also become one of the main contributors to many environmental problems. Emerging sustainable development challenges such as disaster risks are brought by rapid urbanization, unsustainable development practices and climate change. More than half of the world?s largest cities, with populations ranging from 2 to 15 million, are currently located in areas of high risk of seismic activity. Furthermore, almost a billion people live in slums or marginal and informal settlements without access to basic services and they are often in high-risk areas. If not addressed properly and in time, disasters will continue to pose significant threats to people?s lives and assets and development actions. It is critical for all stakeholders concerned to bring about a sea change in how we address urban disaster risks.	United Nations International Strategy for Disaster Reduction (UNISDR)	
Accelerating clean and sustainable energy access for all in Africa	20/06/2012	9:00:00	P3-F (Riocentro)	Energy is essential for socio-economic, human and technological development. Access to energy remains a fundamental and key ingredient to achieve sustainable development. Access to clean modern energy services is equally an enormous challenge facing the African continent. Africa accounts for about 3% of world energy consumption, the lowest per capita modern energy consumption in the world. However, solving the challenges facing the provision of universal energy access in Africa will require improve energy efficiency practices, harness untapped renewable energy potential and accelerate the introduction of Independent Power Producers. The South African Government is committed to reducing carbon emissions and provide clean energy sources.	South Africa	
Strengthening Students of Sustainability: Interdisciplinary Approaches	20/06/2012	9:00:00	T-5 (Riocentro)	This side event will introduce two approaches that universities in both developed and emerging economies are using to promote the interdisciplinary training of their students on critical environmental issues. Speakers will represent the Princeton Energy and Climate Scholars (PECS), and the Pontifícia Universidade Católica (PUC) do Rio de Janeiro?s Interdisciplinary Center for the Environment (NIMA). PECS is a group of Princeton University graduate students from a variety of disciplinary backgrounds focusing on energy and/or climate related research who meet frequently to discuss their research and important environmental issues. PUC NIMA?s Sustainable University project takes a holistic approach to transforming the university into a model for sustainable development, from the classroom to the entire campus. Representatives from both groups will introduce the concept behind their organization, how they differ from traditional student environmental organizations, and how these interdisciplinary models can be applied to other institutions. □	Princeton University	

Measure What Matters	20/06/2012	9:00:00	T-4 (Riocentro)	If we are to create a resilient economy that provides a better life for all within the ecological limits of the planet, a new frame of reference for decision-making is required, involving new ways to measure progress. The event will focus on the three major proposals in the negotiating text: • The momentum for a set of goals at the global level that focus on sustainable development • Proposals for a set of national performance metrics that go beyond GDP • The call for more integrated and robust corporate reporting that helps to redefine business value Our proposition is that in order for these metrics to be transformational, then these need to be aligned against the same broad objectives such that they work together to drive change. The purpose of the event will be to discuss how the processes to develop these metrics can be linked such that these systems are mutually reinforcing. The outcome will be to build upon a working group of key organizations and governments to take this forward.	Prince Accounting for Sustainability Project	
Public Investment: chalanges and opportunities of sustainable development	20/06/2012	9:00:00	P3-6 (Riocentro)	In recent years, Brazil has "relearned to think the future", but our pattern of development is still in development itself. In comparison to the 1980s, there have certainly been important changes. The first one is the role of income distribution as an essential element ? "distribute to grow". Social inclusion is a core issue for our development. The second point is environmental sustainability and the struggle to overcome the false antagonism between ?development? and ?environment?. These changes place Brazil as an internationally recognized reference for sustainable development strategy. However, some challenges still remain: - Reduced interested of entrepreneurs on investment and technical progress; - Structural, economic and social disparities, which lead to maldistribution of income and to poverty; - A pattern of international insertion with excessive specialization in natural resources and insufficient export diversity; - A Social Welfare State still under construction.	Brazil

Tourism for a Sustainable Future	20/06/2012	11:00:00	T-4 (Riocentro)	In the face of global challenges, tourism has become a key instrument for eradicating poverty, responding to climate change, environmental sustainability and contributing to the Millennium Development Goals (MDGs). Furthermore, the tourism sector has been identified within the Green Economy Initiative of the United Nations (UN) as one of the ten sectors which can lead in the transformation to the new social, economic and environmental model, while still addressing development challenges in all economies and nations toward a more sustainable path, with improved benefits and opportunities for humanity?s future while preserving its natural environment. Tourism for sustainable development can be the future, but clearly requires effective, coherent and coordinated government policies and actions, including in other sectors.	World Tourism Organization (UNWTO)	

Building Marine Ecosystem Resilience to Ocean Acidification	20/06/2012	11:00:00	P3-B (Riocentro)	The Pacific Small Island Developing States in partnership with Earthjustice will host a side event on ?Building Marine Ecosystem Resilience to Ocean Acidification? during the Rio+20 final PrepComm. A significant body of science and experience shows that reducing pollution, overfishing, and other stressors builds resilience to ocean acidification in sensitive species and ecosystems, including coral reefs, critical for marine biodiversity, global food security and sustainable livelihoods and development in the Pacific and around the world. Building resilience is fundamental to the three pillars of sustainable development on which the Pacific depends. Legal, policy, and financial solutions will be examined with special attention given to successful efforts to build marine ecosystem resilience in the Small Island Developing States.	Micronesia, Federated States of	
The Urban Games: A Competition to Promote Green Cities	20/06/2012	11:00:00	T-8 (Riocentro)	This side event will feature a interactive competition on urban environmental issues. The host of these ?The Urban Games? will provide a series of challenging questions to the 6-8 participating mayors and governors. Throughout the ?contest,? the competitors will share their experience and in-depth knowledge on how they are promoting environmentally-sustainable urban development in their cities. The discussion will showcase how local decision makers in the developing world can harness existing knowledge, financial resources and technologies to develop ?green cities.? The main target audience is various stakeholders (e.g. policymakers at the national and local levels, staff of donor agencies, NGOs) that support the formulation and implementation of sustainable urban policies, programs and projects.	Asian Development Bank (ADB)	
Partnerships for Education in the Green Economy	20/06/2012	11:00:00	T-5 (Riocentro)	Partnerships for Education: Building the foundations of a green, prosperous and equitable global economy. With support from UNESCO, the World Bank and BG Group, the International Business Leaders Forum will present new research on Partnerships for Education. The session will feature a panel of expert speakers representing the different sectors engaged in education partnerships, together with a keynote address. Education has a central role to play in realising the vision of a sustainable future that will be shared at the Rio+20 Summit. The objectives of the event are to raise awareness of the opportunities and key success factors for effective education partnerships, and to build a platform and network to expand the delivery of effective cross-sectoral education partnerships after Rio+20.	International Business Leaders Forum	
Water and Sanitation: Rights for Sustainable Development	20/06/2012	11:00:00	T-9 (Riocentro)	Adequate water supply is essential to reduce the risk of disease and to ensure the right to food, health and housing. Water is a key factor in many activities, and access to water and sanitation improves school attendance, productivity and reduces health risks for women. Sustainable management of water resources is an essential component of the fight against poverty, and the right to safe and clean drinking water and sanitation as a human right is essential for the full enjoyment of all human rights. Spain has played a leading role in the international recognition of the human right to water and sanitation. The objective of the side event is to contribute to the Río+20 process by promoting debate and exchange of ideas among different stakeholders, and partners on the challenge of implementing the human right to water and sanitation and including it in post 2015 development agenda.	Spain	
Renewing Africa's Energy Future	20/06/2012	11:00:00	T-2 (Riocentro)	His Excellency Namburete, Minister of Energy of Mozambique, in his capacity as President of the IRENA Assembly, will host a side event on Africa's Energy Future, with the participation of energy ministers and environment ministers. African heads of state will also be invited depending on availability.	International Renewable Energy Agency (IRENA)	
Beyond GDP: Measuring the Future We Want	20/06/2012	11:00:00	P3-6 (Riocentro)	This event will contribute to the outcomes of the UNCSD by making the case for measuring progress through a people-centered approach based on protecting and promoting human capabilities, choices, and freedoms. Based on the human development paradigm, with a global vision of equitable growth with social and environmental sustainability, the Rio panel will examine how the Human Development Index (HDI) can be adapted to incorporate environmental sustainability dimensions, and serve as a measure of the future we want - High level round table with participation of the UNDP Administrator Helen Clark, and Heads of State/Government of Indonesia (tbc) and Denmark (tbc). - Q&A session with prominent experts and opinion leaders	United Nations Development Programme (UNDP)	
The importance of micro and small business for sustainable development	20/06/2012	11:00:00	P3-5 (Riocentro)	SEBRAE proposes to demonstrate that micro and small business are a important actor in the context of the promotion of sustainable development.	SEBRAE	
Sustentabilidade: um planeta de oportunidades	20/06/2012	11:00:00	Aterro do Flamengo	Sustentabilidade é um elemento de mercado. Na palestra, você reconhecerá a importância da sustentabilidade nos seus negócios para que a sua empresa torne-se mais competitiva, por meio de soluções inovadoras em sustentabilidade que garantam efetivos ganhos.		SEBRAE

Redução de Desperdício - Como Ganhar Mais Gastando Menos	20/06/2012	11:00:00	Aterro do Flamengo	Consultoria coletiva, fornece soluções rápidas e sob medida para os produtos e serviços da empresa. É uma oportunidade de esclarecer dúvidas e obter informações sobre identificação e redução de desperdícios nos empreendimentos, aplicação de ações corretivas, diminuição de custos, aumento da produtividade e minimização dos impactos no ambiente. Propõe soluções por meio de medidas de racionalização no uso dos insumos e de matérias-primas, eliminação dos desperdícios, ampliação da eficiência da empresa, trazendo economia financeira e melhorando, desta forma, a sua competitividade no mercado. É o ambiente que proporciona a interação pessoal da empresa com especialistas, com hora marcada e em pequenos grupos de no máximo 30 empresas		SEBRAE
Negócios Verdes	20/06/2012	11:00:00	Aterro do Flamengo	O que são negócios verdes? Palestra introdutória sobre as mudanças climáticas e suas consequências no mundo dos negócios, criando oportunidades para "negócios verdes".	Palestrante: Juarez de Paula	SEBRAE
Eficiência Energética na Iluminação	20/06/2012	11:00:00	Aterro do Flamengo	Nessa palestra serão mostrados os pontos mais comuns de desperdício de energia em sistemas de iluminação, além de apresentar algumas soluções típicas voltadas para a eliminação desses desperdícios. Serão abordados aspectos técnicos e não técnicos em uma linguagem atraente de fácil entendimento, como por exemplo, o efeito da cor da luz no comportamento humano.	Palestrante: Márcio Américo	SEBRAE
Estocolmo sustentável, de 1972 ao futuro	20/06/2012	11:00:00	Parque dos Atletas	A cidade de Estocolmo foi a cidade anfitriã da primeira Conferência das Nações Unidas sobre Desenvolvimento e Meio Ambiente Humano, em 1972. Desde então, as cidades tornaram-se cada vez mais importantes como os principais motores para a sustentabilidade. Estocolmo tem grandes ambições para o futuro e quando a Comissão Européia ofereceu à cidade o prestigioso prêmio de primeira Capital Verde Européia de 2010, ficou claro que estamos no caminho certo. Durante o seminário a cidade de Estocolmo convida o público a participar na jornada de sustentabilidade com a qual a cidade tem se comprometido nos últimos anos para enfrentar vários desafios urbanos, tais como energia, transportes e habitação. Vamos ilustrar esse trabalho dando alguns exemplos de desenvolvimento urbano para inspirar outras cidades. Evento aberto ao público. Palestrantes: Gunnar Söderholm (Director of Environment at City of Stockholm).	Embaixada da Suécia	Gunnar Söderholm
Governança para a Sustentabilidade – Modelo de Gestão do Governo de Pernambuco	20/06/2012	11:00:00	Parque dos Atletas	O Modelo de Gestão implantado em Pernambuco pela Lei Complementar 141 vem trazendo avanços em todas as áreas da administração pública. Ouvir a população é a base de todo o planejamento. Através de seminários realizados em todas as regiões do Estado são percebidas as necessidades da população e definidas as prioridades do trabalho, que são integradas ao plano de Governo, cuja síntese é o Mapa da Estratégia. Os objetivos são monitorados periodicamente garantindo o bom funcionamento da gestão. A qualidade de vida da população e o crescimento econômico do Estado são promovidos de forma equilibrada e dinâmica, garantindo a sustentabilidade do desenvolvimento e a melhoria da entrega dos serviços públicos. Isso corresponde a uma vida melhor para milhares de pernambucanos. Palestrante: Alexandre Rebêlo, Secretario de Planejamento e Gestão do Estado de Pernambuco.	Secretaria de Meio ambiente e Sustentabilidade do Estado de Pernambuco	Alexandre Rebêlo

Estocolmo+40 - Um chamado para a ação	20/06/2012	12:00:00	Parque dos Atletas	Na corrida preparatória para a conferência do Rio+20, a conferência de Estocolmo+40 - Fórum de Parceria para o Desenvolvimento Sustentável teve lugar em Estocolmo nos dia 23-25 de abril, em comemoração ao 40º aniversário da Conferência das Nações Unidas sobre o Ambiente Humano em 1972, também conhecida como a Conferência de Estocolmo. O objetivo da conferência foi fornecer uma plataforma para compartilhar bons exemplos e discutir medidas concretas para a transformação sustentável, e propor recomendações sobre como os atuantes em diferentes áreas podem contribuir e se unir em coligações futuras para o avanço da agenda de desenvolvimento sustentável. Estocolmo+40 teve como objetivo desenvolver um momento para o desenvolvimento sustentável visando a conferência do Rio +20 e mais além. Cerca de 700 pesquisadores, políticos, jovens, líderes empresariais e da sociedade civil, incluindo 40 ministros de países desenvolvidos e em desenvolvimento selecionados participaram. O resultado do Fórum de Parceria de Estocolmo+40 para o Desenvolvimento Sustentável, o Chamado Estocolmo para Ação sintetizou as discussões e recomendações durante os três dias, incluindo o diálogo ministerial. O documento foi emitido pelas anfitriãs Lena Ek, Ministra do Ambiente, e Gunilla Carlsson, Ministra de Cooperação	Embaixada da Suécia	Gunilla Carlsson e Lena Ek
Uma iniciativa de economia azul para a conservação marinha e costeira nas nações insulares do Caribe, do Pacífico, do Oceano Índico e do Triângulo de Coral: integrando objetivos na adaptação das costas, da pesca, do turismo e da segurança alimentar.	20/06/2012	12:00:00	Parque dos Atletas	Evento apoiará o diálogo entre os países insulares e os países que possuem ilhas, sobre iniciativas significativas para a conservação marinha e costeira: Iniciativa Desafio do Caribe, a Iniciativa Triângulo de Coral, o Desafio Micronésia e o emergente Desafio do Oceano Índico. O evento promoverá o intercâmbio de lições aprendidas, know-how, tecnologias e novas iniciativas conjuntas entre as ilhas, mostrando a contribuição da conservação marinha e costeira para o desenvolvimento sustentável, buscando oportunidades de ampliação destas inicaitivas. Desenvolvimento com Direitos Humanos	20/06/2012	13:00:00	Parque dos Atletas	A presença de autoridades de direitos humanos de vários países da América Latina e Caribe na Conferência Rio+20 representa uma oportunidade hitsórica para aprofundar as discussões a respeitro da icorporação das perspectivas de direitos humanos às políticas de proteção ambiental e desenvolvimento sustentável na região. Com vistas a fomentar o diálogo e o intercâmbio de experiências nessa matéria, a Secretaria de Direitos Humanos da Presidência da República (SDH/PR) realizará, durante a Rio+20, um encontro "Desenvolvimento com Direitos Humanos", que contará com a participação de autoridades de direitos humanos da área, bem como de representantes de organismos internacionais e da sociedade civil organizada. O evento será composto por quatro painéis temáticos sobre os temas "Promoção dos direitos humanos", "Proteção dos direitos humanos", "Direitos das crianças e dos adolescentes" e "Direito das pessoas com deficiência". Evento restrito a convidados. Palestrantes: Ministra Maria do Rosário, Ministra de Estado Chefe da Secretaria de Direitos Humanos da Presidência da República; Doutora Salete Valesan Camba, Secretária Nacional de Promoção e Defesa dos Direitos Humanos (SDH/PR); Doutora Carmen da Silveira, Secretária Nacional de Promoção da Criança e dos Adolescentes (SDH/PR), Doutor Antonio	SDH/PR	Ministra Maria do Rosário; Doutora Salete Valesan Camba; Doutora Carmen da Silveira, Doutor Antonio José Ferreira
From Rio to Rio: A 20-year Journey to Green the World's Economies	20/06/2012	13:00:00	T-6 (Riocentro)	An historic outcome of the 1992 Earth Summit, the Global Environment Facility (GEF) was established to assist developing nations incorporate global environmental benefits into their traditional development efforts. To reflect on the 20 years of GEF, a book that tells the story of a remarkable portfolio amounting to over $50 billion will be launched and discussed in this high-level event. The book features 20 initiatives that illustrate the strength and breadth of the GEF implemented by MDBs, UN agencies, country governments and NGOs. The event will celebrate the launch of this remarkable account and showcase environmental successes that trace their roots to the 1992 Earth Summit. The event will feature addresses from high-level representatives of initiatives highlighted in the publication and offer practical solutions to sustainable development, inspire attendees negotiating current conference outcomes, and offer new commitments by GEF and its partners for the next round of funding in 2014.	Global Environment Facility (GEF)	
The Yasuní-ITT Initiative: shifting paradigms for a sustainable future	20/06/2012	13:00:00	P3-E (Riocentro)	The Yasuní-ITT Initiative is a pioneering and holistic climate change mitigation and social development proposal. Yasuní National Park, located in Ecuador´s Amazon rainforest, is among the top 5 biodiversity hotspots of the planet, as well as home to indigenous cultures living in voluntary isolation. The Yasuní-ITT Initiative intends to indefinitely abstain from extracting 846 million barrels of oil from the ITT fields hereby avoiding the emission of 406 million tons of CO2 into the atmosphere and significantly contributing to global climate change mitigation efforts while conserving both the incredible biodiversity the Yasuní National Park holds and the ancestral indigenous cultures living there in voluntary isolation.	Ecuador	
Sustainable Maritime Development - The Contribution of Maritime Transport to Green Growth and Inclusive Development	20/06/2012	13:00:00	T-5 (Riocentro)	The strategic importance of shipping and maritime activities in a sustainable future: Sustainable Maritime Development - The Contribution of Maritime Transport to Green Growth and Inclusive Development The IMO side event will explain how international shipping contributes significantly to the three pillars of sustainable development, the eradication of poverty and the widespread development of green growth. It will also present IMO?s vision of a framework for Sustainable Maritime Development. Shipping is an essential component of any programme for future sustainable economic growth. A job in shipping is a green job. Trade can facilitate the structural transformation of developing economies toward higher value-added products, leading to eradication of poverty, greener economies and a positive, beneficial impact on incomes and people. The regulatory regime developed by IMO, supported by a comprehensive body of guidelines and recommended practices, provides a blueprint for countries to develop their maritime transport infrastructure in a safe, efficient and environmentally sound manner.	International Maritime Organization (IMO)	

Multilateral Co-operation Towards Sustainable Development	20/06/2012	13:00:00	T-2 (Riocentro)	The high-level side event "Multilateral Co-operation Towards Sustainable Development: A Rio+20 Dialogue with the Heads of WTO, UNEP and ILO" wil explore the contribution that Rio+20 can make to enhance coherence among systems of governance in the transition to a green economy. It will highlight the importance of international dialogue both to promote a better understanding of the links between trade, environment and social policies and to assist countries in designing and implementing sound sustainable development policy frameworks tailored to their unique goals and priorities. The side event will offer an opportunity to explore possible avenues for strengthening cooperation among WTO, UNEP, and ILO in support of the expected outcomes from Rio+20. The side event will include interventions by: ? Mr. Pascal LAMY, Director-General of the World Trade Organization (WTO); ? Mr. Juan SOMAVIA, Director-General of the International Labour Organization (ILO); and ? Mr. Achim STEINER, Executive Director of the United Nations Environment Programme (UNEP).	World Trade Organization (WTO)

Northern Lights on Sustainable Development	20/06/2012	13:00:00	P3-B (Riocentro)	Growing prosperity has made it possible for countries in the Baltic Sea Region to invest in solutions to many environmental problems. In fact, no other region in the world has such a strong track-record when it comes to green economy and sustainable development, in both principle and practice. The side event will focus on how regional cooperation can deliver sustainable development and act as bridge between national actions and global commitments. The side event will also highlight some successful projects for cross-sectoral and integrated approaches to sustainable development as well as launch a publication on key messages on green economy.	Council of Baltic	
Local Action and Partnerships for more resilient people and communitie	20/06/2012	13:00:00	T-8 (Riocentro)	Sustainable development defined by Bruntland¡¦s 1987 report ¡§Our Common Future¡¨ remains valid today: ¡§Development meets the needs of the present without compromising the ability of future generations to meet their own needs¡¨. Local action, which strengthens resilience, is key to its achievement. It is also clear that no actor alone can achieve sustainable development; meaningful partenrships are required. Objective of the side event is to highlight the importance of the following: ?Ï local actions in strengthening resilience of vulnerable communities as a key contribution for the fulfilment of the internationally agreed sustainable development agenda, ?Ï inclusive partnerships at all levels, across humanitarian and developmental actors, which support greater resilience toward effective sustainable development	International Federation of Red Cross and Red Crescent Societies	

Making a green economy happen	20/06/2012	13:00:00	T-10 (Riocentro)	Today?s collective sustainability challenge requires all actors, whether business, government or civil society, to accept shared responsibility and shift mind-sets towards more collaborative and solutions-oriented thinking. The move towards a ?Green Economy? necessitates a global discourse that addresses the current fragmentation in the world?s economic systems, which should result in new and innovative collaborations across the chain of business and with government to bring solutions to these challenges. This side event will discuss the global efforts by business, government and civil society at all levels, aiming at strategies to better integrate the economic, environmental and social dimensions of sustainable development. During this event, the International Chamber of Commerce (ICC) will present its ?Green Economy Roadmap?, a framework that sets timetables for specific goals, objectives and actions at local, national, and global levels.	International Chamber of Commerce (ICC)	
THE MALDIVES STORY	20/06/2012	13:00:00	P3-F (Riocentro)	Since the United Nations Conference on Environment and Development in 1992, the Maldives has faced unique challenges as a Small Island Developing State in fulfilling its commitments under Agenda 21 and subsequent agreements pertaining to sustainable development. The biggest challenge Facing the country is climate change and its impacts, which threatens its sustainable developmental aspirations, its fragile ecosystems and the very existence of the country itself. As a small island state, Maldives would like to share its experiences of the past twenty years with the international community in the hope that a better understanding of the circumstances of small islands states would help enable SIDS concerns to be reflected more meaningfully in the final outcome document negotiated in the conference.	Maldives	
Natural Capital Summit	20/06/2012	13:00:00	T-4 (Riocentro)	Countries, governments or businesses cannot deliver sustainability alone. Managing our transition to a green economy requires all parties to act together, internationally, across the public and private sectors and civil society. Focusing on the role of natural capital, and building on the shared recognition that we use nature because it is valuable, but lose nature because it is free, this event will bring together a range of initiatives at different levels to demonstrate specific approaches to meeting their common goal of improving how we account for the value of nature in decisions. Governments, financiers and businesses will show why we need to go ?beyond GDP? and mainstream financial accounting to understand the real progress of our countries and companies. They will highlight the role of natural capital in delivering economic prosperity and human well-being and commit to working together to create the conditions necessary to sustainably manage natural capital stocks.	United Kingdom	
VISION20/30-Vision for Independence of Small Islands frm Fossil Energy	20/06/2012	13:00:00	T-9 (Riocentro)	Leaders from island nations, UN agencies, several major international/regional organizations, private sector and financial institutions have formed a coalition to support the Small Island Developing States (SIDS) and participating Island Economies to achieve their goals of becoming energy independent. This process is being launched during the historic Rio+20 Conference at the platform provided by the UN Secretary General?s initiative of Sustainable Energy for All. Successful implementation of these plans would not only bring prosperity and economic development to Island Economies but it will also showcase examples of ?smart? economic growth and development. This, we hope, would accelerate the goal of universal energy access for all through renewable energy while also stabilizing greenhouse gas emissions. This event will feature announcements by Island leaders and commitments by the implementing partner organizations. An action plan for pilot Island Economies to achieve their energy transformation goals by 2030 will also be presented.	Climate Institute

Denmark and South Africa show the way: Corporate Social Responsibility	20/06/2012	17:00:00	T-2 (Riocentro)	The event will focus on the topic of sustainability reporting as a tool to advance a Green and Responsible Economy. The Danish Prime Minister and the South African Minister of Environment will testify that this is common and successful practice in their countries. Achim Steiner will picture the broader context. The objective of the event will be to profile i) the role of business and ensure accountability of the corporate sector, ii) the importance of corporate sustainability reporting in sustainable development policies, iii) the role of governments as regulators with special emphasis on Denmark presenting the results of its sustainability reporting policy and the South African approach and iv) the strong multi-stakeholder collaboration among the different Rio+20 actors (Governments, CSOs and Private Sector). The targeted audience includes Heads of State; the UN SG; Heads of Delegations; business community including GRI Reporters and Organizational Stakeholders and UNGC Signatories and CSOs.	Stakeholder Forum for a Sustainable Future	
Sharing and Partnering in Urban Water Solutions	20/06/2012	17:00:00	P3-B (Riocentro)	The side event is based on Israel's long experience in the water arena and especially in the field of Urban Water Solutions. Urban water will be critical for global development in the 21st century. Half of the world's population already lives in cities. Urban water infrastructure is decaying and will need to be replaced. Existing systems lack the sophistication and integration with data that the latest technology can offer. Israel has long played a major role in creating smart urban water systems for both developed and developing countries. Israel is actively cooperating with developing countries to ensure safe and accessible urban water. For example, we have a bilateral agreement with India's Ministry of Urban Development on water issues and with SABESP in Brazil to name a few.	Israel	
MONITORING SUSTAINABLE DEVELOPMENT - WHY LOCATION MATTERS	20/06/2012	17:00:00	T-10 (Riocentro)	This side event, organized by the UN Global Geospatial Information Management (UNGGIM) secretariat and supported by United Kingdom, Australia, and Brazil, will demonstrate the vital role accurate, maintained and reliable geospatial information can, and indeed is, playing in helping to deliver sustainable development across the globe and in providing financial benefits to users. It will illustrate why Member States should develop and leverage accurate and maintained geospatial information in order to deliver successfully on the outcomes of Rio+20 and to monitor the implementation of such outcomes effectively. We expect a senior politician from the government of the United Kingdom to give the opening speech. The presentations will be based on real-country experiences and illustrative and non-technical. The main target audience is senior government officials with decision responsibility on monitoring systems for sustainable development.	United Nations Global Geospatial Information Management Secretariat	

Socio-Environmental Protection Floor	20/06/2012	17:00:00	P3-6 (Riocentro)	Translating Principle 1 of the Rio Declaration into practice requires specific policies which together create a ?Socio-environmental Protection Floor? for the population. The creation of such a ?Floor? has had profoundly positive effects in several countries. This session will explore those experiences, assess their potential for wider adoption, and discuss their viability as an outcome of the Rio+20 Conference. A ?Socio-environmental Protection Floor? ensures basic income and services that are essential for health, food security, water and sanitation, while linking protection of the people to protection of the environment. The combination of methods and components of the ?Floor? promotes conservation of environmental assets and resources in poor communities, benefiting not only the community but also improving the quality of the global environment. The session?s debate starts with the analysis of international experiences, such the Brazilian Green Grant (Bolsa Verde) and other initiatives from Asia, Africa and Latin America.	Brazil	
Advancing Sustainable Development in Post-Conflict Countries	20/06/2012	17:00:00	P3-F (Riocentro)	The United Nations Department of Economic and Social Affairs (UNDESA) is in the final stages of implementing the Project ROA-105 ?Strengthening National Capacity for the Integration of Sustainable Development Principles into Development Strategies in Countries Emerging from Conflict?. The main objectives of the project are to: 1) Produce methodologies that explain and illustrate ways to integrate sustainable development principles into national development strategies as part of peacebuilding processes; and 2) Increase the capacity of governments to utilize sustainable development principles in policy-making in countries emerging from conflict through an inclusive approach that includes creating guidelines for conflict-sensitive National Sustainable Development Strategies (NSDS), performing in depth country analysis and needs assessments, and organizing stakeholder consultations with both government and civil society. The 3-year project, involved 2 main pilot countries-Lebanon and Liberia - in integrating sustainable development as part of the peacebuilding processes	Lebanon	
Sustainable Development in the context of Regional Integration in EAC	20/06/2012	17:00:00	P3-E (Riocentro)	The overall objective of the side event is to showcase EAC?s efforts, achievements and challenges in the implementation of sustainable development goals in the region within the context of EAC?s integration process. More specifically, the event shall review the progress in the implementation of the EAC Treaty and its related Protocols relevant to sustainable development namely; the Sustainable Development of Lake Victoria Basin (2003), Protocol on Environment and Natural Resources Management (2006); and Environment and Natural Resources provisions of the EAC Common Market Protocol (2009). The event is expected to mobilize political will and support to EAC on the Implementation of Regional Policy Instruments aimed at contributing to the three pillars of sustainable development in the region and identify the role of EAC?s in monitoring the implementation of the Rio+20 Outcome.	East African Community (EAC)	
VISION 2050 TURKEY	20/06/2012	17:00:00	T-5 (Riocentro)	In 2011, TUSIAD prepared the ?Vision 2050 TURKEY? Report, which was inspired by WBCSD?s ?Vision 2050? Report. ?Vision 2050 TURKEY? aims to answer the question of how a sustainable Turkey looks like and draws a roadmap as to how to achieve this objective. The Report contains ?Human Development?, ?Urbanisation?, ?Urban Transportation?, ?Energy? and ?Consumption Patterns and Energy and Resource Efficiency in Production? chapters. It was introduced by a large scale conference held in Istanbul on September 27, 2011 with the participation of WBCSD Turkey. In RIO+20, we would like to organize a side event similar to this conference. The event will begin with a short film and opening remarks, which will be followed by the presentation of ?Vision 2050 Turkey? Report. There will also be a panel on ?Sustainable Development and the Business World?. The organizing partners are planned to be UNDP, WBCSD, GFN and the Ministry of Development Turkey.	Turkish Business and Industry Association (TUSIAD)	

Across the Regions: SIDS Solutions for Sustainable Development	20/06/2012	17:00:00	T-8 (Riocentro)	The Commonwealth Secretariat, the Indian Ocean Commission, the South Pacific Regional Environment Programme and the Caribbean Community Climate Change Centre propose a side event to explore the value of cross-regional learning to foster climate resilience and the Green Economy in SIDS. The side event will look at the value that communities of practice and partnerships across SIDS regions can deliver in terms of mutual learning and appropriate SIDS-tailored responses to building climate resilience and a Green Economy. The event is complimentary to UNDESA?s work on SIDSNet and SIDSdoc.	Commonwealth Secretariat - United Kingdom	
The way forward to a sustainable future	20/06/2012	17:00:00	T-9 (Riocentro)	The event will look at the conditions for a green economy under an inclusive perspective, with pa	Germany	
Vulnerability of urban migrants: Challenges and responses	20/06/2012	17:00:00	T-6 (Riocentro)	Increasing numbers of migrants, including refugees and internally displaced persons, move into cities in search of the opportunities cities provide. Cities offer more livelihood options and security for those fleeing crises areas. Recent research has described how intense weather events, sea level rise and accelerated environmental degradation exacerbated by climate change act as a major driver of migration, including displacement. Populations under environmental or climate-induced stress, or affected by natural disasters or conflicts, are prone to gravitate to urban areas, where they often face multi-dimensional vulnerabilities which too frequently are chronic and recurrent. Additionally, this increase in urban population risks putting further strains on limited resources, weak infrastructure and fragile ecosystems, particularly for many of the world?s largest cities located in low lying coastal regions. The side event, in the form of a panel-led discussion, will elaborate upon key issues at stake and launch a number of concrete initiatives and voluntary contributions to the implementation of the post-Rio+20 sustainable development agenda.	International Organization for Migration (IOM)

Lançamento da Revista Universitária Trilíngue: "Destinos: Olhares Além da Fachada Sobre a Baixada Fluminense"	20/06/2012	17:30:00	UFRRJ – CAMPUS NOVA IGUAÇU	Lançamento da Revista “Destinos: Olhares além da Fachada” – tema 2011 Praia do Aventureiro Ilha Grande/RJ, tema 2012 Baixada Fluminense. O GEMTE (Grupo de Estudos em Marketing, Tecnologia e Ecologia) da UFRRJ, desenvolve um projeto de extensão universitária que tem como produto final uma revista chamada "Destinos: Olhares além da Fachada". Trata-se de uma publicação informativa trilíngue com distribuição gratuita pelo site da UFRRJ e de forma impressa. Com autores nacionais e internacionais, mostrando uma realidade boa que pouco se vê sobre alguns lugares e sobre algumas pessoas. A revista é o resultado de 1 ano de contato com um grupo social escolhido dentro de um tema, e tem a missão de ser a voz escrita de grupos que têm pouco espaço na mídia, mostrando quem são, o que os seus lugares têm de interessante e diferente e o que estão fazendo localmente. É um trabalho multidisciplinar, pois temos alunos de administração, turismo, letras, ciência da computação, gestão ambiental, jornalismo e educação física. A primeira revista entrou online e foi distribuída no ano de 2011, o tema era Praia do Aventureiro, na Ilha Grande - RJ, onde vive uma comunidade tradicional caiçara em uma unidade de conservação, local de turismo feito pela própria comunidade, preferido por surfistas e ecoturistas. A segunda, que será lançada durante a Rio+20, no dia 20 de junho de 2012, na UFRRJ, campus de Nova Iguaçu, apresenta a Baixada Fluminense e está belíssima. A Baixada Fluminense é mostrada com todos os seus aspectos positivos, sua beleza e vocação turística e esportiva. Assim como as pessoas incríveis que estão fazendo ações diferentes e interessantes na região. Envio o link para a primeira revista. O tema foi a praia do Aventureiro (2011), que é parte do resultado de outro projeto financiado pelo Ministério do Turismo, que terminou ano passado: http://r1.ufrrj.br/im/gemte/pdf/Revista_Destinos_01.pdf A revista 2012 sobre a Baixada Fluminense estará no site do GEMTE a partir do dia 20 de junho: r1.ufrrj.br/im/gemte	UFRRJ	

Dersu Uzala	20/06/2012	18:00:00	MAM	de Akira Kurosawa. Japão/URSS, 1975. Com Maxim Munzuk, Yuri Solomin, Vladimir Kremena. Legendas em português. 140'. Um camponês mongol serve de guia para um militar russo, que está em uma expedição para fazer um levantamento topográfico da Sibéria. Filme ganhador do Oscar de Melhor Filme Estrangeiro. Goals for Healthy Soils and the Role of the Global Soil Partnership	20/06/2012	19:00:00	P3-B (Riocentro)	Land and soils deliver key ecosystem services and are pillars of the green economy. They support human well-being and provide sustenance for all including the poor, and are a source of decent new jobs and economic progress. Their degradation is a serious global issue because of its adverse impact on food security, climate change, and ecosystem resilience. Current land and soil degradation rates are unsustainable, thus business-as-usual is not an option. The side event will discuss what kind of goals and targets on land and soil should be decided upon in Rio+20 and what role FAO's Global Soil Partnership and other relevant initiatives could play in supporting their implementation. Senior speakers from diverse regions of the world will indicate which direction the planet should take to ensure that land and soil develop their full potential, thus contributing to the Rio+20 outcome in an informal setting.	European Commission	
ACTO Member Countries vision of Amazon forests. Monitoring deforestati	20/06/2012	19:00:00	P3-F (Riocentro)	ACTO member countries (Brazil, Bolivia, Colombia, Ecuador, Guyana, Peru, Suriname and Venezuela) will present their vision concerning sustainable development, in particular in sustainable forest management (SFM). Progress on project implementation: Monitoring Deforestation in the Panamazonian Forests will be presented.	Organização do Tratado de Cooperação Amazônica SP/OTCA - Amazon Cooperation Treaty Organization	
Towards a Green Economy Transition in Indonesia	20/06/2012	19:00:00	T-6 (Riocentro)	Indonesia is at the forefront of nations that are catalyzing alternative development pathways that can bring benefits for conservation and equity. It has signed a Letter of Intent with Norway on the realization of REDD+ and subsequent regulatory actions. While the Cancun Agreement of the UNFCCC 17th CoP took the discussions on REDD+ further and the Aichi Nagoya protocol of the 10th CoP of CBD has laid out clear targets, there still remains a large gap with regards the financing required to achieve REDD+ and shift current patterns of forest use and the economies of forested landscapes towards a more sustainable Green Economy pathway, as envisioned by H.E. the President of Indonesia. Indonesia would like to share its experiences and consult with key stakeholders at Rio+20 on a sustainable transition to climate and sustainable development.	REDD+ Task Force of Indonesia

The Future We Create: An interdisciplinary roundtable discussion on th	20/06/2012	19:00:00	T-10 (Riocentro)	Article 36 of Agenda 21 reads: ?Education is critical for promoting sustainable development and improving the capacity of the people to address environment and development issues.? Therefore, education, both formal and non-formal, must play a vital role in achieving the objective and the themes set forth for the forthcoming UNCSD. However, education has not been fully tapped in our efforts for sustainable development. Education plays an important role in virtually all thematic areas. For instance, the General Assembly adopted the UN Declaration on Human Rights Education and Training (A/RES/66/137) in 2011. This year marks the tenth anniversary of the UN Study on Disarmament and Non-proliferation Education. The roundtable will bring together participants from various areas of work and examine best practices and lessons learned and generate recommendations on the role of education and learning for UNCSD and its themes.	Soka Gakkai International	

Black gold and the green economy: hydrocarbon exporters' perspectives	20/06/2012	19:00:00	P3-A (Riocentro)	The ten years post-Johannesburg have witnessed a tectonic shift in the development strategies of major hydrocarbon exporters. Countries like the UAE have made multibillion investments in renewable energy, urban sustainability, environmental management, and cleantech education, emerging alongside Norway in navigation of seemingly contradictory imperatives. This side event reviews the case for sustainability in major hydrocarbon economies, highlighting both the drivers and barriers that shape long-term economic, social, and environmental health and performance. Panel discussion and presentations by private and public sector commentators from the UAE, Norway, the International Renewable Energy Agency, the World Bank Group, and other countries and entities will illuminate the lessons for implementation of the Rio+20 agenda through the unique experience of the global economy?s essential fuel suppliers.	United Arab Emirates	
Health and Sustainable Development - Reinforcing the Links	20/06/2012	19:00:00	T-9 (Riocentro)	?Human beings are at the centre of concerns for sustainable development. They are entitled to a healthy and productive life in harmony with nature?. Principle 1 of the 1992 Rio Declaration on Environment and Development Twenty years on, the Government of Brazil, Ministry of Health and the WHO recognize the opportunity provided by the United Nations Conference on Sustainable Development to set the world back onto a sustainable development path in which better and more equitable health outcomes play a key role. The purpose of this event is to help Member States articulate how health and the health sector can contribute towards the achievement of the Rio+20 Conference objectives, support fits decisions and follow-up actions, with respect to three key issues: - Universal health coverage - Health in the 'green economy' - Health as a measure of sustainable development achievements; measuring progress and impact	World Health Organisation (WHO)	
Seizing ecolabelling and sustainable public procurement opportunities	20/06/2012	19:00:00	T-8 (Riocentro)	Ministerial dialogue with Nordic and Southern Cone countries sets the focus on ecolabelling and sustainable public procurement (SPP) and highlights the potential and advantages of the regional co-operation. Ecolabelling and SPP are important instruments in striving for more sustainable consumption and production patterns and green economy. A green economy needs pragmatic approaches with feasible instruments for countries striving for a path towards low-carbon, small-footprint societies. Enhanced use of ecolabelling and SPP improves performance of products throughout their life-cycle, stimulates the demand of more sustainable products and technologies and helps consumers to make more sustainable choices. One inspiring example on the ongoing efforts is a joint venture initiated by the Nordic Council of Ministers and the United Nations Environment Programme. The project evaluates and advances the strategies towards the development of a regional ecolabelling programme and promotes the role of sustainable public procurement in Argentina, Brazil, Chile, Paraguay and Uruguay.	Nordic Council of Ministers	
Financing Access to Clean Energy for the Poor	20/06/2012	19:00:00	P3-E (Riocentro)	Current and anticipated trends in energy poverty are alarming and show that increasing access to energy will be critical to achieving sustainable development. A wide range of technologies is now available not only to scale up energy access but also to foster the use of ?clean? energy. However, in many developing countries, the main obstacle to uptake is the lack of financing models that make energy accessible and affordable to low-income consumers. This side event - entitled: ?Financing Access to Clean Energy for the Poor? - will address this important challenge and present innovative approaches that combine strengthening clean energy value chains with innovative financing arrangements targeting low-income population and micro-enterprises.	UN Capital Development Fund (UNCDF)	

Business Solutions for Sustainability: Rio+20 and beyond	20/06/2012	19:00:00	T-2 (Riocentro)	This side event has four primary objectives: ? Summarize the business contributions to the Rio+20 process - principally through the outputs of in the BASD Business Day (19 June) ? Assess the progress made by business from 1992-2012 as a partner and solution provider in sustainable development ? To highlight business commitments to Sustainable Development ? Identify the key actions necessary to increase private sector initiative and investment in sustainable development The session will include leading figures from business, government, and other stakeholder groups in a moderated discussion format. (Individual participants will depend on the time slot provided.)	World Business Council for Sustainable Development (WBCSD)

Resíduos Sólidos como Vantagem Competitiva	23/06/2012	14:00:00	Aterro do Flamengo	Uma das características mais marcantes da sociedade moderna é a urbanização e, como consequência, o incremento de resíduos sólidos. No Brasil, a destinação inadequada dos resíduos provoca um prejuízo de 8 bilhões de reais por ano ao enviar para os aterros sanitários materiais como celulose, plástico, vidro e alumínio a geração. Em resposta a este cenário, foi regulamentada a Lei nº 12.305 que institui a Política Nacional de Resíduos Sólidos e, logo, todas as empresas deverão atender às exigências, sob pena de arcar com as consequências legais.	Palestrantes: Ricardo Barros e Priscila Grimberg	SEBRAE
Sustentabilidade: um planeta de oportunidades	23/06/2012	14:00:00	Aterro do Flamengo	Sustentabilidade é um elemento de mercado. Na palestra, você reconhecerá a importância da sustentabilidade nos seus negócios para que a sua empresa torne-se mais competitiva, por meio de soluções inovadoras em sustentabilidade que garantam efetivos ganhos. 	21/06/2012	9:00:00	T-6 (Riocentro)	This event is from the global leaders in Green Economics who created the field of Green Economics as an academic discipline and who have been resposible for its spread over the last 10 years. The first green academic journal International Journal of Green Economics which is double blind peer reviewed will be introduced- now in its 6th volume as well as a complete range of books on green economics and the green economy in 4 series, Ashgate Academic Press, Gower Management Publishers and The Green Economics Reader Series and the Green Economics Handbook series from the Green Economics Institute. This side events charts the history origins, background, theory and practise of Green Economics and the competing ideas within the field and the literature and introduces and analyses the field. There will be 4 speakers and participation is encouraged from the floor.	Green Economics Institute (GEI)	
CSR and sustainability reporting: creating a green economy and sustainable development	21/06/2012	9:00:00	P3-E (Riocentro)		Global Reporting Initiative	

Environmental Auditing for Better Environmental Governance	21/06/2012	9:00:00	P3-A (Riocentro)	INTOSAI Working Group on Environmental Auditing will introduce the main messages of public sector auditors derived throughout years of work of Supreme Audit Institutions about the factors hindering the progress of national governments in their quest towards achieving solid performance in sustainable development. The working group, drawing together Supreme Audit Institutions of more than 70 countries, will present concrete findings of public sector audit institutions worldwide in their various audits on the fields of environment and sustainable development related to governments' work and progress in the area of sustainable development. On their basis, and following the 21st UN-INTOSAI Symposium inviting INTOSAI to contribute to the Rio+20 process, concrete recommendations to UNCSD delegates for incorporating to their agreement text will be presented. Workshop on the Protection of Lake Chad	21/06/2012	9:00:00	T-5 (Riocentro)	L?événement de haut niveau sur la sauvegarde du Lac Tchad prévu à Rio Center, dans la salle T4, le 21 juin 2012 de 9h00 à 10h30. Cet événement qui sera coprésidé par le Tchad et la Commission du Bassin du Lac Tchad se penchera sur la situation du Lac Tchad qui constitue un exemple significatif des effets destructeurs du réchauffement climatique et de la désertification sur l?avenir de l?humanité. Ce sera également l?occasion de contribuer à la réflexion sur les perspectives de mise en ?uvre des résultats attendus de la Conférence des Nations Unies sur le Développement Durable Rio+20, notamment sur les projets de préservation et de gestion des eaux du Lac Tchad au profil des populations qui vivent de ses ressources.	Chad	
Environmental Fiscal Reform - The key to achieving a green economy	21/06/2012	9:00:00	T-10 (Riocentro)	This side-event will demonstrate that Environmental Fiscal Reform (EFR) is an essential policy instrument for a Green Economy. The event will focus on carbon-energy taxation and the phase-out of environmentally harmful subsidies. Speakers will highlight successful examples of EFR and present measures planned in the future. The discus-sion will explore how EFR can support governments in the process of greening their economies and bring-ing about environmental improvements, while also raising additional tax revenues for poverty alleviation or pro-poor investment. Participants will also watch video excerpts of interviews with political figures talking about their vision of a Green Economy in 2030. The event will raise awareness of EFR as a central policy tool for the Green Economy with a number of en-vironmental, economic and social co-benefits and support the arguments of delegates willing to strengthen language in the final document on the phase-out of environmentally harmful subsidies and other EFR meas-ures.	Green Budget Europe	
UN multi-stakeholder strategies for scaling-up and mainstreaming SD	21/06/2012	9:00:00	T-4 (Riocentro)	Learning for sustainable development is already acknowledged as a key in transformation towards more sustainable society. In order to achieve a green economy and green society, and to build a world fit for children, contemporary patterns of production, ways of consumption, applications of technologies, foci of innovation, policies governing major aspects of our lives and even the cities, towns and villages in which we live have to be radically transformed.	United Nations Children's Fund (UNICEF)	
Sustainable, Inclusive Growth: The Way Forward from Rio+20 and G20	21/06/2012	9:00:00	T-9 (Riocentro)	In 2050, we will be 9bn people on the planet. We know the challenges that this implies for energy, food, water ? especially, if we set the ambition of creating a global middle class comprising all of us. To turn these challenges into opportunities for sustainable and equitable growth, a closer collaboration between the public and private sectors is needed. The UN Secretary-General, who has made sustainable development his top priority, the President of Mexico, G20 chair and a leading regional champion on sustainable growth, the President of South Korea, one of the world's green growth economy leaders, and the Prime Minister of Denmark,current Presidency of the Council of the European Union and a pioneer of clean growth, as well as a number of other prominent decision-makers and thought leaders, will be part of a session on critical post Rio+20 and G20 implementation challenges and how to intensify private sector engagement in driving the transition to a sustainable and inclusive growth economy. The session will address the challenge of speed-to-scale in securing green and inclusive growth called for by the Secretary-General's High Level Panel on Global Sustainability, and explore how platforms such as the Global Green Growth Forum can contribute to spur action and scale up and intensify business contribution in the transition to a green economy.	Denmark	

Sustainable Development and Water: Global Goal, Targets, Partnerships	21/06/2012	9:00:00	P3-F (Riocentro)	Water has been mentioned, for example in the discussions on Sustainable Development Goals, as one of the thematic areas on which a new global goal should be set. Such goal would promote socially, economically and environmentally sustainable use and management of water resources, as well as implementation of related human right obligations. What would be the content of such global goal? What kind of specific targets should be set to promote its achievement? How states, private sector actors and civil society can work together towards these targets?	Finland	
Energy, Gender and Economic Growth	21/06/2012	9:00:00	T-8 (Riocentro)	Reaching the goal of sustainable energy to all will only be possible through women?s increased participation in the economy. Norway proposes a side-event to explore the linkages between sustainable energy, gender and development. The event will take the form of a dialogue imagining the impact of decisions made during Rio+20, , looking back from a 2030 perspective. This will followed by a high-level panel discussion including leaders from both industrialized and developing countries as well ass business and NGO leaders. The expected outcome of this event is that member states will endorse the importance of integrating a gender and sustainability perspective in their energy planning and policies.	Norway	
Energy Efficiency in Buildings: key element of global SD agenda	21/06/2012	9:00:00	T-4 (Riocentro)	Buildings belong to the most basic human needs with food, water & clothes. The more an economy develops, the more people spend time within buildings (up to 90% of their time in developed environments). The building sector has major impacts on the environment. It is the largest energy consumer of all end-use sectors, accounting for a third of total energy demand and for a large portion of GHG emissions in all economies. Additionally, when considering solutions to lower their energy consumption, buildings present the largest potential for GHG reductions. As they represent the immediate environment to human beings, buildings will also be a key sector for CC adaptation. Unfortunately, the building sector has not yet received the focus it deserves in CC policies. In developing countries, new constructions will quickly account to high proportion of energy demand. In developed countries, building energy refurbishment needs to be harnessed rapidly and efficiently.	UNDP - Energy, Infrastructure, Transport and Technology

Beyond the GDP: toward social and environmental sustainability indicators	21/06/2012	11:00:00	P3-A (Riocentro)	A highlight of RIO+20 is that the UN and major international players have agreed to initiate work to develop new indicators leading us towards a more sustainable and fair world. But which indicators will be proposed? Certainly some more or less green varieties of the GDP or of the ANS (Adjusted Net Saving). The danger that there remain solely monetized indicators exists, as the outcomes of the World Bank, UNEP and the European Commission suggest. FAIR has often noticed the many limitations of such indicators: they mask the irreversibility of certain pollution or destruction, they do not reflect deficiencies in inequality or in human and environmental rights. Worse, they give us the illusion that it would be possible to compensate for severe deterioration of resources or climate through for example financial, training or research and development investments. Lastly, FAIR is looking for how to choose and build sustainability indicators for and by citizens. Our struggle for the democratic establishment of non-monetary indicators of ecological and social sustainability joined the one of NGO activists defending the ecological footprint or these of the Southern States representatives directly threatened by the human consequences of climatic disorders	Forum pour d'autres Indicateurs de Richesse (FAIR)	
The Rights of Nature to reach Buen Vivir	21/06/2012	11:00:00	T-9 (Riocentro)	The Rights of Nature and Buen Vivir, or life at its fullest, are the main innovative proposals that Ecuador has made in its Constitution and that it is implementing through public policy. Ecuador has the first country in the world taht recognizes the rights of nature and is implementing within a plurinational and intercultural state guided by the concept of Buen Vivir, which means living in harmony with nature, with oneself and with others. Buen Vivir is presented as an alternative to the concept of development.	Ecuador	
Women Leaders' Summit on the Future Women Want	21/06/2012	11:00:00	T-2 (Riocentro)	UN Women, in collaboration with the Government of Brazil, is organizing the Women Leaders? Summit on the Future Women Want on 21 June 2012. The Summit will gather women Heads of State and Government to endorse a ?Call to Action? to highlight women?s vital contribution to realizing sustainable development as well as benefit from it. Their agency, leadership, voice and participation is crucial to this call and must therefore be fostered. The Summit follows the multi-stakeholder Leaders? Forum on the Future Women Forum: Gender Equality and Women?s Empowerment for Sustainable Development, to be held on 19 June 2012, which will bring together leaders and experts from governments, the UN System, civil society organizations, academia and the private sector to discuss and reaffirm the centrality and the inter-linkages of gender equality and women?s empowerment with the three dimensions of sustainable development?social, economic and environmental. You can follow the live tweeting from @UN_Women in English and @ONUMujeres in Spanish and Portuguese, and use the hashtag #WomenRio to ask questions to the panelists.	United Nations Entity for Gender Equality and the Empowerment of Women (UN Women)	
Green Economy and Agriculture: Tools for policy makers to account for	21/06/2012	11:00:00	P3-F (Riocentro)	Climate change and its consequences are recognized amongst the major environmental challenges for this century. These issues impact agriculture and forestry in several ways: 1) The productive systems are affected by climate change and need to develop adaptation strategies. 2) In many parts of the world agriculture heavily relies on chemical inputs, likely to be more and more expensive in the future. On the other hand growing demand for food and bio-energy imply increasing production in the future. 3) Farming, livestock production and deforestation are major GHG producers. 4) Forest and agricultural lands can be major carbon sinks under appropriate management practices. Considering above mentioned aspects, many carbon calculators for agriculture and forestry sectors have been developed recently. ADEME, IRD and the FAO decided to make a review on existing tools focusing on complete tools that assess most of land based activities.	Agence de l?Environnement et de la Maitrise de l?Energie	

Tax and Subsidy Reform for a Greener Economy	21/06/2012	11:00:00	P3-5 (Riocentro)	For many environmental problems, fiscal policies are a very effective instrument. Reflecting environmental costs into market prices gives all actors the right incentives to exploit all possibilities for emissions mitigation and efficient use of natural resources. But the fiscal instruments must be well designed, in terms of targeting the right base, aligning their scale to the magnitude of environmental damages, and using the revenues productively, while also addressing concerns as to the burdens on households and industry. Often, however, the first priority in ?getting the prices right? is reform of existing energy and agricultural subsidies that distort the functioning of markets, and run counter to environmental objectives. This session will provide recommendations for tax and subsidy reforms to promote environmental sustainability. Case studies will be examined, with a focus on experience in Latin America, Asia, and selected countries of the OECD area.	International Monetary Fund (IMF)	
Sustainable Development - Human Dimension	21/06/2012	11:00:00	T-6 (Riocentro)	High Level Side Event to promote human development within the context of sustainable development.	Turkey	
Songs and Voices of Worldwide Youth: A Call to Act For Change Now!	21/06/2012	11:00:00	P3-E (Riocentro)	The YMCA is both the largest and oldest youth organisation in the world, reaching 58 million people throughout 119 countries worldwide. Representing youth globally, we will through our event seek to urge politicians to greater ambition, responsibility and political courage. We will have young speakers within our delegation from around the world present their different messages, and further emphasise our communal responsibility through a short film and a song performance. This will be followed by a panel discussion with politicians from national delegations including Ministers, as well as UN representatives, and will include questions from the floor. See under “Read more” for a list of panellists and further details.	World Alliance of YMCAs	
Climate Compatible Development for Sustainability & Climate Security	21/06/2012	11:00:00	P3-B (Riocentro)	CDKN and FFLA will lead a high level debate on the climate security agenda in the Amazon and worldwide, focusing on ways in which Climate Compatible Development can reduce the threats that climate change poses on water, energy, and food security, and ecosystems resilience. Panelists from the research arena, from the political level and from the social sector, coming from LAC, Africa and Asia will showcase specific examples of where this has happened. The event will promote dialogue between science, policy and action, bridging the gaps and integrating global and regional levels. This event will offer the perspective of developing countries on the topic, drawing from CDKN?s experience working in these regions.	Fundación Futuro Latinoamericano	
Future Cities and National Urban Policies	21/06/2012	11:00:00	T-2 (Riocentro)	This side event will convene six high-level speakers ? including a Head of State, Minister, Mayor, and CEO -- from different regions for an interactive discussion facilitated by a high-profile journalist. The expected outcome is that member states will endorse the importance of developing national urban policies as levers for sustainable development. Cities must rapidly address unprecedented demographic and spatial expansion. However, poor capacity, dwindling funds and dysfunctional linkages with higher levels of government have yielded sprawl, congestion and segregation ? environmental, economic and social, respectively ? which are sometimes beyond their immediate control. Many cities cannot tackle these challenges alone: they require interventions at higher levels of government. One crucial step is to integrate urban development in national sustainable development policies. These can serve as enabling frameworks for transport corridors, job creation and development within and between cities, and they can also empower local authorities to work more closely with national governments.	United Nations Human Settlements Programme (UN-HABITAT)	
Future Cities We Want-Linking and Spreading Sustainable Future Cities-	21/06/2012	11:00:00	P3-F (Riocentro)	In order to achieve Sustainable Development, building sustainable cities is indispensable. There are a number of frameworks that have been put forward by organizations and associations working on sustainable cities, however, many municipalities, particularly in developing countries, face the lack of technology as well as financial and human resources. In order to build more sustainable cities, it is important to share best practices and to support their own efforts and knowledge sharing. At this side event, Japan, on behalf of itself and its partners, will announce an establishment of an initiative of ?Future Cities We Want?. Activities to be implemented in this initiative are: to formulate concepts of ?Future Cities?; to establish a platform to coordinate a number of existing frameworks; to establish a platform for local authorities to provide mutual support; to establish a mechanism to support resource mobilization; and to promote regional cooperative mechanisms.	Japan	

Panel discussion 'Young people in the life cycle of sustainable devt.'	21/06/2012	11:00:00	T-6 (Riocentro)	The panel discussion aims to focus on bringing a youth perspective to sustainable development. Scouting will share inputs on how and why Child and Youth Participation is at the core of Scouting?s fundamentals and we wish to invite other youth organisations and key UN agencies to bring their views and inputs. The discussion hopes to provide an understanding of the impact of engaging young people and the advantage of involving the youth very early in development processes and problem solving on the global issues concerning the world today.	World Organization of the Scout Movement (WOSM)	
El derecho a ciudades justas, democraticas y sostenibles	21/06/2012	11:00:00	T-4 (Riocentro)	Esta actividad discutirá la articulación de actores sociales hacia una plataforma de convergencia por El derecho a la ciudad: Reforma urbana y cambio de paradigma hacia ciudades justas, democráticas y sostenibles. Reunirá organizaciones de diversas redes en una construcción de compromisos comunes a ser presentados a los gobiernos nacionales, gobiernos locales, organizaciones sociales. En este taller vamos a discutir estrategias para consolidar la plataforma del derecho a la ciudad. La dinámica del evento se desarrollará con dos ponencias, la presentación de las redes y un debate abierto al público.	Habitat International Colation (HIC)	
High Level Round Table on the International Treaty	21/06/2012	11:00:00	P3-A (Riocentro)	As the Italian Minister indicated at the first HLRT, Italy is going to facilitate a second HLRT and that the most effective option of convening the 2nd HLRT would be to organize it in relation to the Rio +20 Summit under the auspices of the High Level Task Force of the BSF, which is currently chaired by H.E. Min. Lars Peder Brekk. The main focus will be: 1. To highlight the interaction between the economy, biodiversity and food security; 2. To showcase the Treaty as one of the foremost legal instruments leading the agricultural field internationally with innovative mechanisms such as the Multilateral System of Access and Benefit-sharing and its Benefit-sharing Fund; 3. ?Facilitate the High Level discussion on the Potential Monetary and Non-monetary Benefits Arising from the Utilization of Plant Genetic Resources under the Multilateral System of the International Plant Treaty?. It is proposed that the event will take place June 2012 in Rio de Janeiro.	Secretariat of the International Treaty on Plant Genetic Resources for Food and Agriculture - (sub of FAO)	
Sustainable Futures: Youth, Innovation & the MDGs	21/06/2012	11:00:00	T-5 (Riocentro)	The UN has recognized the need to harness the energy, imagination and initiative of the world?s youth in overcoming the challenges facing humankind, from enhancing peace to boosting economic development and dealing with Climate Change. This event will focus on youth as agents of change and catalysts in achieving the MDGs and beyond, with a focus on innovations that are youth driven dealing with sustainable development. It will: a) present some powerful examples of youth-led initiatives which impact local decision-making processes b) showcase tech and social business solutions which empower communities and c) provide recommendations for ensuring stronger linkages between the youth and MDG agenda 2015+.	United Nations Department of Economic and Social Affairs (UNDESA)	
Beyond the GDP: toward social and environmental sustainability indicators	21/06/2012	11:00:00	P3-A (Riocentro)	A highlight of RIO+20 is that the UN and major international players have agreed to initiate work to develop new indicators leading us towards a more sustainable and fair world. But which indicators will be proposed? Certainly some more or less green varieties of the GDP or of the ANS (Adjusted Net Saving). The danger that there remain solely monetized indicators exists, as the outcomes of the World Bank, UNEP and the European Commission suggest. FAIR has often noticed the many limitations of such indicators: they mask the irreversibility of certain pollution or destruction, they do not reflect deficiencies in inequality or in human and environmental rights. Worse, they give us the illusion that it would be possible to compensate for severe deterioration of resources or climate through for example financial, training or research and development investments. Lastly, FAIR is looking for how to choose and build sustainability indicators for and by citizens. Our struggle for the democratic establishment of non-monetary indicators of ecological and social sustainability joined the one of NGO activists defending the ecological footprint or these of the Southern States representatives directly threatened by the human consequences of climatic disorders.	Forum pour d'autres Indicateurs de Richesse (FAIR)	
The Rights of Nature to reach Buen Vivir	21/06/2012	11:00:00	T-9 (Riocentro)	The Rights of Nature and Buen Vivir, or life at its fullest, are the main innovative proposals that Ecuador has made in its Constitution and that it is implementing through public policy. Ecuador has the first country in the world taht recognizes the rights of nature and is implementing within a plurinational and intercultural state guided by the concept of Buen Vivir, which means living in harmony with nature, with oneself and with others. Buen Vivir is presented as an alternative to the concept of development.	Ecuador	

Women Leaders' Summit on the Future Women Want	21/06/2012	11:00:00	T-2 (Riocentro)	UN Women, in collaboration with the Government of Brazil, is organizing the Women Leaders? Summit on the Future Women Want on 21 June 2012. The Summit will gather women Heads of State and Government to endorse a ?Call to Action? to highlight women?s vital contribution to realizing sustainable development as well as benefit from it. Their agency, leadership, voice and participation is crucial to this call and must therefore be fostered. The Summit follows the multi-stakeholder Leaders? Forum on the Future Women Forum: Gender Equality and Women?s Empowerment for Sustainable Development, to be held on 19 June 2012, which will bring together leaders and experts from governments, the UN System, civil society organizations, academia and the private sector to discuss and reaffirm the centrality and the inter-linkages of gender equality and women?s empowerment with the three dimensions of sustainable development?social, economic and environmental. You can follow the live tweeting from @UN_Women in English and @ONUMujeres in Spanish and Portuguese, and use the hashtag #WomenRio to ask questions to the panelists.	United Nations Entity for Gender Equality and the Empowerment of Women (UN Women)	
Green Economy and Agriculture: Tools for policy makers to account for	21/06/2012	11:00:00	P3-F (Riocentro)	Climate change and its consequences are recognized amongst the major environmental challenges for this century. These issues impact agriculture and forestry in several ways: 1) The productive systems are affected by climate change and need to develop adaptation strategies. 2) In many parts of the world agriculture heavily relies on chemical inputs, likely to be more and more expensive in the future. On the other hand growing demand for food and bio-energy imply increasing production in the future. 3) Farming, livestock production and deforestation are major GHG producers. 4) Forest and agricultural lands can be major carbon sinks under appropriate management practices. Considering above mentioned aspects, many carbon calculators for agriculture and forestry sectors have been developed recently. ADEME, IRD and the FAO decided to make a review on existing tools focusing on complete tools that assess most of land based activities.	Agence de l?Environnement et de la Maitrise de l?Energie	
Tax and Subsidy Reform for a Greener Economy	21/06/2012	11:00:00	P3-5 (Riocentro)	For many environmental problems, fiscal policies are a very effective instrument. Reflecting environmental costs into market prices gives all actors the right incentives to exploit all possibilities for emissions mitigation and efficient use of natural resources. But the fiscal instruments must be well designed, in terms of targeting the right base, aligning their scale to the magnitude of environmental damages, and using the revenues productively, while also addressing concerns as to the burdens on households and industry. Often, however, the first priority in ?getting the prices right? is reform of existing energy and agricultural subsidies that distort the functioning of markets, and run counter to environmental objectives. This session will provide recommendations for tax and subsidy reforms to promote environmental sustainability. Case studies will be examined, with a focus on experience in Latin America, Asia, and selected countries of the OECD area.	International Monetary Fund (IMF)

Measuring a Green Economy: Insights into "Beyond GDP" Indicators	21/06/2012	13:00:00	T-10 (Riocentro)	The side event will provide an incisive and highly original up-to-date contribution to the ongoing discussions on indicators relevant for measuring progress of transition to a green economy in the context of ?Beyond GDP? initiatives. It will be opened by Minister of the Environment of the Czech Republic, Mr Tomá? Chalupa, to be followed by presentations of eminent experts of the leading international organizations, agencies, think-tanks and academia, such as the Organization for Economic Co-operation and Development, the European Environment Agency, the Global Footprint Network and the Charles University in Prague. The side event´s ambition is to highlight one of the key expected elements of the Rio+20 outcome document, i.e. reliable measuring methods as a prerequisite for responsible and informed policy decision-making.	Czech Republic	
Building Together: Sustainable Development in the Brazilian Amazon	21/06/2012	13:00:00	T-9 (Riocentro)	Prior to Rio+20, the 9 states that compose the Brazilian Amazon have come together to develop the Amazon Letter to Rio+20, with the objective of identifying the main needs and bottlenecks of the region, but also to propose a roadmap to the sustainable development of the region. The construction of this document involved representatives of the 9 major groups active in each one of the states and was lead by the State's Governors, in cooperation with Federal Government institutions and culminated with the Amazon Sustainable Development Meeting, in which 400 representatives from all the Major Groups came together to consolidate the document. The objective of the side event is to present the building process and outcomes of the Letter, including the commitments adopted the 9 regional states. the side event will be hosted by the states' Governors. The final version of the letter will be ready on June 1st.	Associacao Brasileira de Entidades Estaduais de Meio Ambiente - ABEMA	
Inclusive Green Growth: Challenges and Opportunities on the Pathway to Sustainable Development	21/06/2012	13:00:00	P3-6 (Riocentro)	Over the last 20 years economic growth has lifted more than 660 million people out of poverty and raised the income levels of millions more, but growth has too often come at the expense of the environment. Environmental damages are reaching a scale at which they are beginning to threaten growth prospects and progress made on social welfare. Moreover, despite the gains from growth, 1.3 billion people do not have access to electricity, 2.6 billion have no access to sanitation, and 900 million lack safe, clean drinking water. In other words, growth has not been inclusive enough. What we need, therefore, is growth that growth that is both environmentally sustainable and meets the needs of the poorest and most vulnerable?in other words, inclusive green growth. Inclusive green growth is the pathway to sustainable development, one that reconciles the urgent need for rapid growth with the imperative of avoiding lock-in to unsustainable growth patterns and irreversible environmental damages. Inclusive green growth is not anti-growth, nor is it slower growth; rather, it represents an incremental change in how we manage economies	World Bank	
Managing natural resources in Namibia in the green economy context	21/06/2012	13:00:00	P3-E (Riocentro)	One year before the UNCSD in Rio de Janeiro, the Ministry of Environment and Tourism (MET), with support from the German Federal Ministry of Economic Cooperation and Development (BMZ), initiated a multi-stakeholder dialogue process to create public awareness on the concept of Green Economy and to identify concrete opportunities to support the green economy transition in the specific context of Namibia. After the initial dialogues in July 2011, thematic working groups continued to elaborate on the key issues and their results were further consolidated in a second stakeholder meeting in November 2011. The outcomes of this process guided the formulation of the Green Economy Chapter in Namibia´s National Report to the UNCSD as well as the country´s contribution to the Zero Draft Document.	Namibia

Creating Wealth and Prosperity in a Resource Constrained World: Count	21/06/2012	13:00:00	P3-E (Riocentro)	This event, co-organized by several Governments and UN partners, will focus on practical country experiences with one of the key themes of the conference: green economy in the context of sustainable development and poverty eradication. It will provide a high level venue for country leaders to share their experiences, knowledge and best practices about how they are shaping their national agendas with regard to the concept of a green economy, looking in particular through the lens of national economic planning. The event seeks to enhance the state of knowledge and awareness about different policy options and initiatives that are being implemented and tested from a variety of different situations that promote employment, income and socially inclusive growth that optimizes country endowments of natural resources and positions them for prosperity in a resource constrained world. Time for Strategic Decisions	21/06/2012	13:00:00	T-8 (Riocentro)	Discussion on Kazakhstan?s initiatives ? Global Energy-Ecological Strategy and Green Bridge Partnership Programme. Side-event will focus on the two initiatives that Kazakhstan has proposed for the Rio+20 Conference: the Global Energy-Ecological Strategy and the Green Bridge Partnership Programme. The event will serve as a platform for wide discussion on these two initiatives, their goals, mode of implementation, collaboration, achievements and prospects. Side-event will be followed by lunch RSVP: kazakhstan.rio20@gmail.com mukitanov@mail.ru baltugan@mail.ru	Kazakhstan	
Measuring a Green Economy: Insights into "Beyond GDP" Indicators	21/06/2012	13:00:00	T-10 (Riocentro)	The side event will provide an incisive and highly original up-to-date contribution to the ongoing discussions on indicators relevant for measuring progress of transition to a green economy in the context of ?Beyond GDP? initiatives. It will be opened by Minister of the Environment of the Czech Republic, Mr Tomá? Chalupa, to be followed by presentations of eminent experts of the leading international organizations, agencies, think-tanks and academia, such as the Organization for Economic Co-operation and Development, the European Environment Agency, the Global Footprint Network and the Charles University in Prague. The side event´s ambition is to highlight one of the key expected elements of the Rio+20 outcome document, i.e. reliable measuring methods as a prerequisite for responsible and informed policy decision-making. Building Together: Sustainable Development in the Brazilian Amazon	21/06/2012	13:00:00	T-9 (Riocentro)	Prior to Rio+20, the 9 states that compose the Brazilian Amazon have come together to develop the Amazon Letter to Rio+20, with the objective of identifying the main needs and bottlenecks of the region, but also to propose a roadmap to the sustainable development of the region. The construction of this document involved representatives of the 9 major groups active in each one of the states and was lead by the State's Governors, in cooperation with Federal Government institutions and culminated with the Amazon Sustainable Development Meeting, in which 400 representatives from all the Major Groups came together to consolidate the document. The objective of the side event is to present the building process and outcomes of the Letter, including the commitments adopted the 9 regional states. the side event will be hosted by the states' Governors. The final version of the letter will be ready on June 1st.	Associacao Brasileira de Entidades Estaduais de Meio Ambiente - ABEMA	

Inclusive Green Growth: Challenges and Opportunities on the Pathway to Sustainable Development	21/06/2012	13:00:00	P3-6 (Riocentro)	Over the last 20 years economic growth has lifted more than 660 million people out of poverty and raised the income levels of millions more, but growth has too often come at the expense of the environment. Environmental damages are reaching a scale at which they are beginning to threaten growth prospects and progress made on social welfare. Moreover, despite the gains from growth, 1.3 billion people do not have access to electricity, 2.6 billion have no access to sanitation, and 900 million lack safe, clean drinking water. In other words, growth has not been inclusive enough. What we need, therefore, is growth that growth that is both environmentally sustainable and meets the needs of the poorest and most vulnerable?in other words, inclusive green growth. Inclusive green growth is the pathway to sustainable development, one that reconciles the urgent need for rapid growth with the imperative of avoiding lock-in to unsustainable growth patterns and irreversible environmental damages. Inclusive green growth is not anti-growth, nor is it slower growth; rather, it represents an incremental change in how we manage economies	World Bank	
Managing natural resources in Namibia in the green economy context	21/06/2012	13:00:00	P3-E (Riocentro)	One year before the UNCSD in Rio de Janeiro, the Ministry of Environment and Tourism (MET), with support from the German Federal Ministry of Economic Cooperation and Development (BMZ), initiated a multi-stakeholder dialogue process to create public awareness on the concept of Green Economy and to identify concrete opportunities to support the green economy transition in the specific context of Namibia. After the initial dialogues in July 2011, thematic working groups continued to elaborate on the key issues and their results were further consolidated in a second stakeholder meeting in November 2011. The outcomes of this process guided the formulation of the Green Economy Chapter in Namibia´s National Report to the UNCSD as well as the country´s contribution to the Zero Draft Document.	Namibia

The Future of Food - Challenges and Recommendations	21/06/2012	13:15:00	P3-B (Riocentro)	Drought, loss of biodiversity, soil degradation and erosion, unpredictable climate variabilities, consequential damages associated with the wide use of agrochemicals amongst others are threatening global agriculture and the food production for a growing population. Today, more than one billion people are constantly affected by hunger and malnutrition. At the same time an equal part is suffering from overweight and obesity. Food and access to the means of food production are unevenly distributed. We would like to discuss questions like: how can we describe the interconnectedness of climate/ environment and agriculture/ nutrition with violent conflicts? What are the probable next steps to improve the overall world food situation? How can relevant international conventions and assessments be linked together, elaborated and communicated in order to impact individual and political action? It is high time that the international civil community channels its knowledge and commitment to help finding sustainable ways to feed the world population.	International Network of Engineers and Scientists for Global Responsibility (INES)	
Preparing for Change: Migration, Black America and the Green Economy	21/06/2012	13:15:00	P3-F (Riocentro)	Preparing for Change: Migration, Black America and the Green Economy will discuss the current migration of Urban Black America and the role Historically Black Colleges and Universities play in preparing students and communities for existing and developing issues related to environmental justice,climate change, human rights, clean energy development, cultural, economic and environmental sustainability.	Deep South Center for Environmental Justice	
CLIMATE, SUSTAINABILITY AND DEVELOPMENT IN DRYLANDS	21/06/2012	13:15:00	T-4 (Riocentro)	Drylands (arid, semi-arid and subhumid lands) represent 40% of the land area of the planet, and 30% percent of the world population, about 2 billion people. Of these, more than 1 billion (also referred to as the forgotten billion) live below the poverty line defined by the World Bank. In fact, most of the world poverty is concentrated in the drylands of Africa, Central and South Asia, and Latina America, including the Northeast of Brazil. These are also the lands that are most prone to suffer from the adverse effects of climate change, according to the last IPCC report and other scientific assessments of climate change. At the same time, these regions contribute significantly to the world production of food and energy. These regions lack political power in the world, and even in each affected country. It is known, However, it is known that there will be no sustainability in the world if the drylands are not themselves sustainably developed.	Centro de Gestao e Estudos Estrategicos ? Brazil (CGEE)

Green Economy: Achievements & Perspectives in the Adriatic-Ionian region	21/06/2012	17:00:00	T-9 (Riocentro)	Regional meeting of the Adriatic-Ionian Initiative (AII), will act as a forum for promoting sub-regional cooperation and affirmation of the current environmental issues, sustainable development and green economy at the member state level. It will be a suitable gathering for country representatives and other stakeholders to define priorities, activities and strategic directions for the development of green economy in accordance with their respective national circumstances, available resources and needs. The Side Event will act as a follow-up to the Roundtable on the Environmental Protection of the Adriatic ? Ionian Initiative, on the Road to Rio+20, which will be held in Belgrade on 22nd March. Conclusions of this regional meeting will be presented and further discussed.	Serbia	
Undertaking Sustainable Development, the Indigenous Peoples' Way	21/06/2012	17:00:00	P3-E (Riocentro)	The side event highlights experiences and lessons of indigenous peoples in undertaking their sustainable development in an integrated holistic manner, one that is based on respect for rights, is ecosystem-based and integrates traditional knowledge and culture.	Tebtebba Foundation	
Morocco: greening it's economy - the road ahead	21/06/2012	17:00:00	T-10 (Riocentro)	Morocco has undertaken several programs over the past years, which are meant to act in favor of a sustainable development. Some of these programs can be considered contributing to building a green economy. The Side Event will be an opportunity to share the Morocco?s experience with delegations from other countries and international organizations. We would like to use this opportunity to highlight some of our experiences and initiatives we believe to be relevant and related to a ?green and inclusive economy in the context of sustainable development and poverty eradication?. Our participation will be accompanied with a film projection, and several reports.	Morocco	

The Partnership Fair	21/06/2012	17:00:00	T-3 (Riocentro)	The Planet Earth Institute (PEI), as a leading NGO operating in the Global South that has successfully implemented several projects and initiatives using a model based in public - private partnerships involving governments, academia, civil society and private sector, is a firm believer in the value of the contributions that Partnerships can make towards advancing the future sustainable development agenda. The Institute has always been a strong supporter of the International Forum on Partnerships for Sustainable Development. It is our belief that only by meeting and discussing ideas in person, can we effectively share our experiences and assist in making Partnership for Sustainable Development a significant contributory element in the build up to, during, and after Rio+20.	Planet Earth Institute (PEI)	
The Partnership Fair	21/06/2012	17:00:00	T-5 (Riocentro)	President Mikhail Gorbachev was urged at the 1992 Earth Summit to create a ?Red Cross for the environment?. 20 years later, Green Cross International returns to Brazil as the unique civil society organization launched at the Rio Earth Summit that continues carrying the Rio flag to this day. Green Cross, joined by eminent partners from the Club of Rome and Earth Charter International, will stage a side event to share learnings from the last 20 years and make the case for urgent and concerted action to avert the threat of dangerous climate change and environmental degradation by addressing its underlying causes. Interventions by distinguished personalities and experts from the worlds of politics, business and civil society will demonstrate the opportunities and co-benefits from effective action to avert these risks by moving onto a path of truly sustainable development. Most importantly, the panel will suggest broad lines of priority and action to preserve a stable climate and viable environment by building new resource-efficient, sustainable societies and economies of the future.	Green Cross International	
South-South&Triangular cooperation:innovative solutions to achieve SDG	21/06/2012	17:00:00	T-6 (Riocentro)	Sustainable Development should represent an opportunity and not a constraint for developing countries. The RIO+20 Summit will consider the definition of Sustainable Development Goals, in line with the Millennium Development Goals. Amongst those goals, the universal access to sustainable energy is a key issue that requires large technology transfer. The South-South and Triangular Cooperation appears as a new dynamic bringing together countries with a view to engaging in collaborative models to share innovative, adaptable and cost-efficient solutions to address their development challenges. Drawing upon relevant evidence, this side-event will focus on essential policy tools, modalities and mechanisms by which to improve the technology transfer and ownership necessary to facilitate the universal access to energy and hence contributing to the development of Southern countries.	ACP Secretariat	
Brazilian Policy to Reduce Deforestation	21/06/2012	17:00:00	P3-F (Riocentro)	The Brazilian experience in fighting deforestation, by integrating the environmental, social and economic perspectives, has essentially become a sustainable development policy, with all the challenges, obstacles and opportunities that the concept carries on. Rio+20, in turn, is, to the eyes of the international community, an opportunity for the discussion of development models that incorporate the three dimensions of sustainability. Therefore, a side event is suggested during the Conference at RioCentro, aimed at, on one hand, celebrating the advances achieved by the Brazilian Government in fighting deforestation ? including the social and economic gains of this process, and on the other hand providing the international debate with lessons learned with this experience, which has created a unique combination between national efforts and international cooperation. Moreover, in the context of South-South cooperation, the Brazilian lessons may strengthen relations between Amazonian countries and other stakeholders for the maintenance of tropical forests.	Brazil	
Tailoring green growth strategies to country circumstances: practical	21/06/2012	17:00:00	T-8 (Riocentro)	Over the last four decades, the world?s population has increased by over 3 billion people, and the world economy has more than tripled. This growth, however, has been unevenly distributed across countries and communities, and has incurred significant costs to the environment. Failure to responsibly manage the natural assets on which life depends under these new pressures will have social consequences, especially for the poor, and can ultimately undermine growth and human development. In response to these challenges, policy efforts to promote more sustainable growth have been intensifying worldwide. This side-event will feature a dialogue between the OECD Secretary-General, government Leaders and Ministers on how green growth reforms can contribute to sustainable development. The need for differentiated green growth strategies to fit countries' specific conditions will be discussed, and how OECD's green growth toolkit and indicators can be adapted to help countries measure their own progress.	Organisation for Economic Co-operation and Development (OECD)	

Global Partnership for Oceans: Coming Together for Healthy and Productive Oceans	21/06/2012	17:00:00	T-4 (Riocentro)	The Principality of Monaco, Republic of Kiribati, and World Bank Group have convened an event to showcase the recently announced Global Partnership for Oceans. The event will include remarks from Prince Albert II of Monaco, President Tong of Kiribati, International Development Minister Heikke Holmås of Norway, Director-General Julia Marton Lefèvre of IUCN, and other government, private sector, and civil society leaders who are committed to responsible ocean stewardship. Limited seating is available. Global Partnership for Oceans website: http://globalpartnershipforoceans.org/	Monaco	
Green Economy: Achievements & Perspectives in the Adriatic-Ionian region	21/06/2012	17:00:00	T-9 (Riocentro)	Regional meeting of the Adriatic-Ionian Initiative (AII), will act as a forum for promoting sub-regional cooperation and affirmation of the current environmental issues, sustainable development and green economy at the member state level. It will be a suitable gathering for country representatives and other stakeholders to define priorities, activities and strategic directions for the development of green economy in accordance with their respective national circumstances, available resources and needs. The Side Event will act as a follow-up to the Roundtable on the Environmental Protection of the Adriatic ? Ionian Initiative, on the Road to Rio+20, which will be held in Belgrade on 22nd March. Conclusions of this regional meeting will be presented and further discussed.	Serbia	
Undertaking Sustainable Development, the Indigenous Peoples' Way	21/06/2012	17:00:00	P3-E (Riocentro)	The side event highlights experiences and lessons of indigenous peoples in undertaking their sustainable development in an integrated holistic manner, one that is based on respect for rights, is ecosystem-based and integrates traditional knowledge and culture.	Tebtebba Foundation	
Morocco: greening it's economy - the road ahead	21/06/2012	17:00:00	T-10 (Riocentro)	Morocco has undertaken several programs over the past years, which are meant to act in favor of a sustainable development. Some of these programs can be considered contributing to building a green economy. The Side Event will be an opportunity to share the Morocco?s experience with delegations from other countries and international organizations. We would like to use this opportunity to highlight some of our experiences and initiatives we believe to be relevant and related to a ?green and inclusive economy in the context of sustainable development and poverty eradication?. Our participation will be accompanied with a film projection, and several reports.	Morocco	
The Partnership Fair	21/06/2012	17:00:00	T-3 (Riocentro)	The Planet Earth Institute (PEI), as a leading NGO operating in the Global South that has successfully implemented several projects and initiatives using a model based in public - private partnerships involving governments, academia, civil society and private sector, is a firm believer in the value of the contributions that Partnerships can make towards advancing the future sustainable development agenda. The Institute has always been a strong supporter of the International Forum on Partnerships for Sustainable Development. It is our belief that only by meeting and discussing ideas in person, can we effectively share our experiences and assist in making Partnership for Sustainable Development a significant contributory element in the build up to, during, and after Rio+20.	Planet Earth Institute (PEI)	
The Partnership Fair	21/06/2012	17:00:00	T-5 (Riocentro)	President Mikhail Gorbachev was urged at the 1992 Earth Summit to create a ?Red Cross for the environment?. 20 years later, Green Cross International returns to Brazil as the unique civil society organization launched at the Rio Earth Summit that continues carrying the Rio flag to this day. Green Cross, joined by eminent partners from the Club of Rome and Earth Charter International, will stage a side event to share learnings from the last 20 years and make the case for urgent and concerted action to avert the threat of dangerous climate change and environmental degradation by addressing its underlying causes. Interventions by distinguished personalities and experts from the worlds of politics, business and civil society will demonstrate the opportunities and co-benefits from effective action to avert these risks by moving onto a path of truly sustainable development. Most importantly, the panel will suggest broad lines of priority and action to preserve a stable climate and viable environment by building new resource-efficient, sustainable societies and economies of the future.	Green Cross International	

South-South&Triangular cooperation:innovative solutions to achieve SDG	21/06/2012	17:00:00	T-6 (Riocentro)	Sustainable Development should represent an opportunity and not a constraint for developing countries. The RIO+20 Summit will consider the definition of Sustainable Development Goals, in line with the Millennium Development Goals. Amongst those goals, the universal access to sustainable energy is a key issue that requires large technology transfer. The South-South and Triangular Cooperation appears as a new dynamic bringing together countries with a view to engaging in collaborative models to share innovative, adaptable and cost-efficient solutions to address their development challenges. Drawing upon relevant evidence, this side-event will focus on essential policy tools, modalities and mechanisms by which to improve the technology transfer and ownership necessary to facilitate the universal access to energy and hence contributing to the development of Southern countries.	ACP Secretariat	
Brazilian Policy to Reduce Deforestation	21/06/2012	17:00:00	P3-F (Riocentro)	The Brazilian experience in fighting deforestation, by integrating the environmental, social and economic perspectives, has essentially become a sustainable development policy, with all the challenges, obstacles and opportunities that the concept carries on. Rio+20, in turn, is, to the eyes of the international community, an opportunity for the discussion of development models that incorporate the three dimensions of sustainability. Therefore, a side event is suggested during the Conference at RioCentro, aimed at, on one hand, celebrating the advances achieved by the Brazilian Government in fighting deforestation ? including the social and economic gains of this process, and on the other hand providing the international debate with lessons learned with this experience, which has created a unique combination between national efforts and international cooperation. Resilient People, Resilient Planet: A Future Worth Choosing	21/06/2012	15:00:00 PM	T-9 (Riocentro)	The UN Secretary-General BAN Ki-moon established the 22-member High-level Panel on Global Sustainability (GSP) in August 2010 to formulate a new blueprint for sustainable development and low-carbon prosperity. On 30 January 2012, the GSP released its report, ?Resilient People, Resilient Planet: A Future Worth Choosing?. The Panel?s vision is to eradicate poverty, reduce inequality and make growth inclusive, and production and consumption more sustainable, while combating climate change and respecting a range of other planetary boundaries. The report contains 56 recommendations aimed at putting sustainable development into practice.	Secretary-General's High-level Panel on Global Sustainability	

Green Growth and Sustainable Development: Regional Perspectives	21/06/2012	15:00:00 PM	T-6 (Riocentro)	The importance of integration of the economic, social and environmental pillars of SD has been long recognized as critical to achieving a balanced development agenda, however, the implementation of the concept in practice has proved to be challenging. There are some examples of good practices in implementing public policies and programmes which have successfully promoted a green economy in key areas. The multidisciplinary expertise and platforms of the Regional Commissions gives them the comparative advantage of promoting a green economy in the context of poverty eradication by linking the economic, social and environmental issues as an integration of the three pillars of SD. As part of this side event, the Regional Commissions are focusing on key elements of the green economy which are critical to their regions and highlighting the challenges, opportunities and the enablers for effectively implementing an integrated approach to sustainable development.	UN Regional Commissions	
Innovative approaches toward the actual implementation of the Green Ec	21/06/2012	15:00:00 PM	T-4 (Riocentro)	Innovative approaches toward the actual implementation of the Green Economy: the Amazonia sem fogo integrated sustainable development model. This event is expected to contribute with substantive methodological and policy lessons learned toward green economy pursuits, in the context of sustainable development and poverty alleviation in forest regions. Building upon a case study in the Amazon biome, it will promote a High Level panel review on the outcomes of an actual application of innovative green growth alternatives to unsustainable agricultural and livestock practices associated to fire-induced deforestation.	Italy	
Innovative approaches for sustainable urban development -North & South	21/06/2012	15:00:00 PM	T-2 (Riocentro)	Increasing urbanization worldwide and its impact on climate change makes the sustainable development of cities and their territories as one of the main challenges and priorities of the 21st century. If urbanization is inadequately spread, it can have negative impacts on environment and dramatic social and economic consequences. However, a well-designed urban development potentially promotes preservation of Global Public Goods, through a considerable economy of scale effect in reducing emissions of greenhouse gases (urban density, public transport ...) and prevention of communicable diseases (access to health services). Urban growth should be framed and supported. As other countries, France is promoting an integrated approach to support sustainable urban development, where local stakeholders, including local governments, are key actors for sustainable development policies. This approach is the result of fruitful exchanges with partners from Southern countries.	French Development Agency (Agence française de développement)	
Initiatives of Central Asian countries toward greening their economies	21/06/2012	15:00:00 PM	T-9 (Riocentro)	The overall goal of the Site Event is to strengthen the international visibility of the commitments of Kyrgyzstan and other Central Asian countries to global voluntary carbon reduction and sustainable development. Having developed unilateral mitigation activities in line with their economic and financial capabilities, CA countries are now engaged in developing NAMAs in different sectors of their economies in order to enhance opportunities to shift to a low carbon sustainable development path. The focus is on sustainable energy as well as on sustainable housing and sustainable agriculture & forestry. Thereby countries engage in ways of restructuring their national economies, which reduce pressure on the prevailing regional distribution conflict on access to energy and water resources. The Side Event shall include the presentation of the concepts of NAMAs and green growth strategies, which are currently under development in this region.	Kyrgyzstan	
SymbioCity - the role of cities in realizing the Rio+20 agenda	21/06/2012	15:00:00 PM	P3-E (Riocentro)	The world is urbanizing fast. As a consequence the development in cities will be of fundamental importance for almost any sustainability issue. At the World Summit on Sustainable Development in Johannesburg in 2002 Sweden launched the SymbioCity-initiative for sustainable cities in partnership with China, building on our experience of innovative, holistic eco-city projects. Since then, the work for sustainable and inclusive urban development has been further intensified in cooperation with China, UAE and other countries and stakeholders who are also spearheading urban sustainability. This side event will engage national and local politicians, front runner cities in Sweden, China, UAE and other countries, industry, urban experts, UN-agencies and stakeholder groups for presentations and discussions on the current thinking, best practices and new commitments for integrated, inclusive and sustainable urban development and the role of cities in realizing the Rio+20 agenda	SymbioCity - the role of cities in realizing the Rio+20 agenda	

Breaking Down Political Barriers to Fossil Fuel Subsidy Reform	21/06/2012	15:00:00 PM	T-8 (Riocentro)	Fossil-fuel subsidies represent inefficient use of public funds, encourage wasteful energy consumption and deter investments in a low-carbon economy. Both G-20 and APEC nations are committed to undertake reform, and the draft UNCSD negotiating text includes commitments to reform subsidies. But recent attempts to phase out fossil-fuel subsidies by the governments of Indonesia, Iran, Nigeria and some other countries have stumbled over significant political barriers. This session aims to foster an open and constructive discussion among all stakeholders on the practical and political barriers to fossil-fuel subsidy reform and how they can be overcome. The session will include perspectives from government officials from both developed and developing countries, industry associations, trade unions, social and labour political activists and civil society organisations.	International Institute for Sustainable Development (IISD)	
Inequality & Sustainable Development-BRICS Perspectives	21/06/2012	15:00:00 PM	T-6 (Riocentro)	The social situations in BRICS countries reveal that economic growth is not sufficient to achieve social and economic justice at national and regional levels. Inequality is a unifying factor across the diverse political and economic contexts of the BRICS countries and entrenched inequality remains an obstacle to sustainable development in these countries. In this context, we will discuss why ?growth is not enough? and how lack of access to common property resources (land, forest produce and state sponsored essential services) results in real reduction in incomes, hits the poor and the near-poor hardest and results in spiking inequality. Brazil´s experience shows that public policies can be effective in addressing inequality and poverty reduction, especially with significant levels of social participation in design and implementation. In the last 20 years, the development of public policies and social participation in Brazil were key elements for the reduction of inequality, hunger, and poverty.	Oxfam	
Corporate Power: Time for a Turnaround	21/06/2012	15:00:00 PM	T-10 (Riocentro)	The event will provide an opportunity for an open discussion about the various interactions between the UN and external stakeholders in the context of UN international negotiations and partnerships for sustainable development. Research and analysis will be provided by civil society organisations from all continents. Participants will be invited to reflect on the engagement and partnership policy that has significantly increased since the Rio summit of 1992. A particular focus will be put on the growing influence of major corporations and business lobby groups in the UN, which is perceived as increasingly resulting on UN policies that do not necessarily serve the public interest, but rather support certain companies or business sectors. The organizers will present solutions based on Binding Obligations on the operations of corporations.	Friends of the Earth	
The Future We Want-The role of dev.cooperation in getting us there	21/06/2012	15:00:00 PM	P3-6 (Riocentro)	Under the theme ?The Future We Want: The role of development cooperation in getting us there? the side event will look the implications of the agreements reached at Rio+20 means for the future of development cooperation. It will focus at the country level, where implementation ultimately will need to take place. It will discuss where development cooperation for sustainable development can benefit from lessons learned in the work on aid effectiveness. More specifically, it will examine how aid should be delivered to best contribute to the goal of sustainable development and identify and best practices. It will also review how to use and further develop existing country-level planning and coordination tools to operationalize and mainstream the outcomes of the Rio+20 summit into national development strategies and policies. Following the multistakeholder tradition of both the Development Cooperation Forum and the Commission for Sustainable Development it will include speakers from Member States and one of the major groups. Presentations by the panellists will be followed by an interactive discussion.	Office for ECOSOC Support and Coordination

Inequality & Sustainable Development-BRICS Perspectives	21/06/2012	15:00:00 PM	T-6 (Riocentro)	The social situations in BRICS countries reveal that economic growth is not sufficient to achieve social and economic justice at national and regional levels. Inequality is a unifying factor across the diverse political and economic contexts of the BRICS countries and entrenched inequality remains an obstacle to sustainable development in these countries. In this context, we will discuss why ?growth is not enough? and how lack of access to common property resources (land, forest produce and state sponsored essential services) results in real reduction in incomes, hits the poor and the near-poor hardest and results in spiking inequality. Brazil´s experience shows that public policies can be effective in addressing inequality and poverty reduction, especially with significant levels of social participation in design and implementation. In the last 20 years, the development of public policies and social participation in Brazil were key elements for the reduction of inequality, hunger, and poverty.	Oxfam	
Corporate Power: Time for a Turnaround	21/06/2012	15:00:00 PM	T-10 (Riocentro)	The event will provide an opportunity for an open discussion about the various interactions between the UN and external stakeholders in the context of UN international negotiations and partnerships for sustainable development. Research and analysis will be provided by civil society organisations from all continents. Participants will be invited to reflect on the engagement and partnership policy that has significantly increased since the Rio summit of 1992. A particular focus will be put on the growing influence of major corporations and business lobby groups in the UN, which is perceived as increasingly resulting on UN policies that do not necessarily serve the public interest, but rather support certain companies or business sectors. The organizers will present solutions based on Binding Obligations on the operations of corporations.	Friends of the Earth	
The Future We Want-The role of dev.cooperation in getting us there	21/06/2012	15:00:00 PM	P3-6 (Riocentro)	Under the theme ?The Future We Want: The role of development cooperation in getting us there? the side event will look the implications of the agreements reached at Rio+20 means for the future of development cooperation. It will focus at the country level, where implementation ultimately will need to take place. It will discuss where development cooperation for sustainable development can benefit from lessons learned in the work on aid effectiveness. More specifically, it will examine how aid should be delivered to best contribute to the goal of sustainable development and identify and best practices. It will also review how to use and further develop existing country-level planning and coordination tools to operationalize and mainstream the outcomes of the Rio+20 summit into national development strategies and policies. Following the multistakeholder tradition of both the Development Cooperation Forum and the Commission for Sustainable Development it will include speakers from Member States and one of the major groups. Presentations by the panellists will be followed by an interactive discussion.	Office for ECOSOC Support and Coordination

Resilient People, Resilient Planet: A Future Worth Choosing	21/06/2012	15:00:00 PM	T-9 (Riocentro)	The UN Secretary-General BAN Ki-moon established the 22-member High-level Panel on Global Sustainability (GSP) in August 2010 to formulate a new blueprint for sustainable development and low-carbon prosperity. On 30 January 2012, the GSP released its report, ?Resilient People, Resilient Planet: A Future Worth Choosing?. The Panel?s vision is to eradicate poverty, reduce inequality and make growth inclusive, and production and consumption more sustainable, while combating climate change and respecting a range of other planetary boundaries. The report contains 56 recommendations aimed at putting sustainable development into practice.	Secretary-General's High-level Panel on Global Sustainability	

Green Growth and Sustainable Development: Regional Perspectives	21/06/2012	15:00:00 PM	T-6 (Riocentro)	The importance of integration of the economic, social and environmental pillars of SD has been long recognized as critical to achieving a balanced development agenda, however, the implementation of the concept in practice has proved to be challenging. There are some examples of good practices in implementing public policies and programmes which have successfully promoted a green economy in key areas. The multidisciplinary expertise and platforms of the Regional Commissions gives them the comparative advantage of promoting a green economy in the context of poverty eradication by linking the economic, social and environmental issues as an integration of the three pillars of SD. As part of this side event, the Regional Commissions are focusing on key elements of the green economy which are critical to their regions and highlighting the challenges, opportunities and the enablers for effectively implementing an integrated approach to sustainable development.	UN Regional Commissions	
Innovative approaches toward the actual implementation of the Green Ec	21/06/2012	15:00:00 PM	T-4 (Riocentro)	Innovative approaches toward the actual implementation of the Green Economy: the Amazonia sem fogo integrated sustainable development model. This event is expected to contribute with substantive methodological and policy lessons learned toward green economy pursuits, in the context of sustainable development and poverty alleviation in forest regions. Building upon a case study in the Amazon biome, it will promote a High Level panel review on the outcomes of an actual application of innovative green growth alternatives to unsustainable agricultural and livestock practices associated to fire-induced deforestation.	Italy	
Innovative approaches for sustainable urban development -North & South	21/06/2012	15:00:00 PM	T-2 (Riocentro)	Increasing urbanization worldwide and its impact on climate change makes the sustainable development of cities and their territories as one of the main challenges and priorities of the 21st century. If urbanization is inadequately spread, it can have negative impacts on environment and dramatic social and economic consequences. However, a well-designed urban development potentially promotes preservation of Global Public Goods, through a considerable economy of scale effect in reducing emissions of greenhouse gases (urban density, public transport ...) and prevention of communicable diseases (access to health services). Urban growth should be framed and supported. As other countries, France is promoting an integrated approach to support sustainable urban development, where local stakeholders, including local governments, are key actors for sustainable development policies. This approach is the result of fruitful exchanges with partners from Southern countries.	French Development Agency (Agence française de développement)	
Initiatives of Central Asian countries toward greening their economies	21/06/2012	15:00:00 PM	T-9 (Riocentro)	The overall goal of the Site Event is to strengthen the international visibility of the commitments of Kyrgyzstan and other Central Asian countries to global voluntary carbon reduction and sustainable development. Having developed unilateral mitigation activities in line with their economic and financial capabilities, CA countries are now engaged in developing NAMAs in different sectors of their economies in order to enhance opportunities to shift to a low carbon sustainable development path. The focus is on sustainable energy as well as on sustainable housing and sustainable agriculture & forestry. Thereby countries engage in ways of restructuring their national economies, which reduce pressure on the prevailing regional distribution conflict on access to energy and water resources. The Side Event shall include the presentation of the concepts of NAMAs and green growth strategies, which are currently under development in this region.	Kyrgyzstan	
SymbioCity - the role of cities in realizing the Rio+20 agenda	21/06/2012	15:00:00 PM	P3-E (Riocentro)	The world is urbanizing fast. As a consequence the development in cities will be of fundamental importance for almost any sustainability issue. At the World Summit on Sustainable Development in Johannesburg in 2002 Sweden launched the SymbioCity-initiative for sustainable cities in partnership with China, building on our experience of innovative, holistic eco-city projects. Since then, the work for sustainable and inclusive urban development has been further intensified in cooperation with China, UAE and other countries and stakeholders who are also spearheading urban sustainability. This side event will engage national and local politicians, front runner cities in Sweden, China, UAE and other countries, industry, urban experts, UN-agencies and stakeholder groups for presentations and discussions on the current thinking, best practices and new commitments for integrated, inclusive and sustainable urban development and the role of cities in realizing the Rio+20 agenda	SymbioCity - the role of cities in realizing the Rio+20 agenda	

Breaking Down Political Barriers to Fossil Fuel Subsidy Reform	21/06/2012	15:00:00 PM	T-8 (Riocentro)	Fossil-fuel subsidies represent inefficient use of public funds, encourage wasteful energy consumption and deter investments in a low-carbon economy. Both G-20 and APEC nations are committed to undertake reform, and the draft UNCSD negotiating text includes commitments to reform subsidies. But recent attempts to phase out fossil-fuel subsidies by the governments of Indonesia, Iran, Nigeria and some other countries have stumbled over significant political barriers. This session aims to foster an open and constructive discussion among all stakeholders on the practical and political barriers to fossil-fuel subsidy reform and how they can be overcome. The session will include perspectives from government officials from both developed and developing countries, industry associations, trade unions, social and labour political activists and civil society organisations.	International Institute for Sustainable Development (IISD)

A global convention on corporate sustainability reporting?	21/06/2012	17:30:00 PM	P3-A (Riocentro)	Governments should express clearly at Rio+20 their commitment to develop a Convention on corporate sustainability reporting. It is now twenty years since the first Earth Summit as such this is momentous opportunity to move the corporate sustainability agenda forward as a mechanism to move towards a 'green economy'. An intergovernmental message from such an important international conference would signal to all listed and large firms that now is the time to act on sustainability. A clear message that an international convention drafting process is ongoing will generate an interest in those firms which have not yet evaluated the way their firm ought to contribute to a sustainable future in a globalized business market ? some twenty years after the first Earth Summit highlighted its importance. Wording to this effect is currently included within the draft summit outcomes document and this event will explain why it should remain.	Aviva	

Organizing for Change: Women's Tribunals as Civil Society Advocacy	21/06/2012	17:30:00 PM	T-9 (Riocentro)	Whether it be unsustainable urbanization, contamination and pollution, deforestation, lack of water and sanitation, poverty and climate change, women bear the brunt of ecological and environmental degradation. As the majority of the world?s farmers, caretakers and impoverished, women will be impacted at a disproportionate rate by global environmental threats. Despite these alarming realities, women voices, and in particular rural and indigenous women, grassroots and impoverished urban women, are not being heard in the corridors of decision-making venues. Furthermore, women?s needs are not being fully addressed in the climate change and sustainability debates at all levels. The proposed session will show how women have elevated their voices in the climate justice debate, featuring the methodology of the women\'s tribunal on gender and climate justice. Panelists will compare and contrast outcomes and policy recommendations of the tribunals. The session will feature short video presentations of rural and grassroots women providing testimony. The presentation of women\'s testimony and experiences will be even more impactful coming from on-the-ground women organizers	The Feminist Task Force (FTF) from the Global Call to Action against Poverty (GCAP)

Food for life & life of food	21/06/2012	19:00:00 PM	T-4	Hunger eradication is fundamental to achieving the Rio vision of sustainable development. Current pathways have left 1.4 billion in extreme poverty, 925 million hungry and many more malnourished and food insecure. There can be no sustainable development when billions of people are left in hunger, poverty and food insecurity on the side-lines of mainstream development, with no protection from risks and shocks, and no hope to contribute to and benefit from growth, nor to fully enjoy their human development potential. Moving sustainable development requires a shift to food production and consumption systems that are productive, sustainable and fair.	Food and Agriculture Organization of the United Nations (FAO)	
Educating for a sustainable future	21/06/2012	19:00:00 PM	T-2	Moving towards sustainable development cannot be achieved by political agreements, financial incentives or technological solutions alone. To safeguard the natural environment and promote greater global equity, we need a fundamental change in the ways we think and act. This can only be achieved if all individuals and societies are equipped and empowered by knowledge, skills and values as well as heightened awareness to drive such change. The transition towards green economies and societies requires that we educate and train everyone and prepare society at large for such a sustainable future. This entails the comprehensive revision of current curricula, job qualifications and corresponding learning objectives of educational programmes at all levels as well as the development or re-design of relevant professional training and capacity-building.	United Nations Educational, Scientific and Cultural Organization (UNESCO)	
Integrating the social dimensions of green economy into policy	21/06/2012	19:00:00 PM	T-9	The preparatory process for Rio+20 has called for renewed attention to the social dimensions of development, however green economy and sustainable development debates have largely been dominated by economic and environmental concerns. This side event brings together policy-relevant lessons from recent research by UNRISD, UNESCO and ISSC, and focuses on the existing gaps and barriers that need to be overcome in order for the social dimensions of green economy to be better integrated into green economy decision-making. We outline what a ?social lens? on green economy might look like, pointing to the key role for social policy in addressing negative social impacts of transition, institutional change, and achieving policy coherence. These social dimensions are not add-ons to economic or environmental concerns, but underpin the process of structural transformation required to move towards development policies that are inclusive, equitable and sustainable. Finally, we highlight directions for future research in this area.	United Nations Research Institute for Social Development (UNRISD)	
PRIVATE SECTOR DIALOGUE IN THE CONTEXT OF GREEN ECONOMY	21/06/2012	19:00:00 PM	P3-E	The private sector is getting increasingly aware of its role for long term growth that is green and inclusive for sustainable development. It is providing new ideas in the fight to end global poverty by partnering with traditional development players such as national aid agencies and NGOs, leveraging supply chains to create economic opportunity for the world?s poorest people, and incorporating social responsibility into their business practices. It is an important contributor to shape the green and inclusive growth agenda of Africa. Governments need to ensure a conducive investment climate to spur private sector engagement. The objective of this side event is to bring together donors, private sector representatives, civil society and government officials to discuss their respective roles in helping enable a conducive environment for private sector development in the context of green growth and green development.	African Development Bank	

The President of the General Assembly is launching a system-wide initiative to offset the carbon footprint from UN staff participation in Rio +20. The Special Unit for South-South Cooperation has been tasked to facilitate this initiative by building partnerships and leveraging the services of its flagship exchange platform - South-South Global Assets and Technology Exchange (SS-GATE) - to offset the estimated 3,600 tonnes of CO2 emissions from the participation (including travel) of approximately 1,400 UN staff in Rio +20. At this side event, the President of the General Assembly will formally launch the initiative and recognize partners and donors. A reception will follow	21/06/2012	19:00:00 PM	T-8	The President of the General Assembly is launching a system-wide initiative to offset the carbon footprint from UN staff participation in Rio +20. VOLUNTEER ACTION COUNTS: THE POWER OF VOLUNTEERISM FOR SD	21/06/2012	19:00:00 PM	T-6	VOLUNTEER ACTION COUNTS: THE POWER OF VOLUNTEERISM FOR SUSTAINABLE DEVELOPMENT Volunteerism is an essential ingredient in the recipe for sustainable development. In the same way as sustainable development is a cross-cutting theme, UNV?s partnerships for Rio+20 are cross-cutting. Building on the global partnerships developed during the International Year of Volunteers + 10, UNV will bring together partners from different organizations, backgrounds and fields: UN Agencies, governments, private sector, academia, NGOs ? from the global North and South ? to speak about citizen participation in making sustainable development for future generations a reality. In its side-event, UNV and partners will provide good practice examples from several countries from the South as well as present the results of the multi-media campaign ?VolunteerActionCounts?. UNV will also stress that sustainable development is more than a political decision and will depend on an adequate operational infrastructure; including volunteers implementing sustainable development activities.	United Nations Volunteers (UNV)	
Second Track beyond Rio - a Chinese Perspective on Green Economy	21/06/2012	19:00:00 PM	T-10	Eco-Forum Global (EFG) is the first of its kind as an international non-profit foundation incorporated in China. EFG believes strongly in the capability of informal mechanisms to bring together key decision makers from all stakeholders to better pursue a sustainable future. Our side event?s theme will be ?China Forum: Building an Inclusive and Green Economy.? We will have a moderator and approximately 5-7 panelists, including Maurice Strong, former Under Secretary-General of the UN, Hans d?Orville, Assistant Director-General for Strategic Planning of UNESCO, and Zhang Xinsheng, Secretary-General of Eco-Forum Global and former Chair of UNESCO?s Executive Board. This side event will provide a conclusion on effective strategies to build a green economy using the Chinese experience as a starting point and discuss ways and actions to sustain progress toward sustainable development goals after Rio+20. In particular, the panel will discuss how informal mechanisms can contribute to a post-Rio+20 world.	Eco-Forum Global	
Decisions we need for the city of 2030	21/06/2012	19:00:00 PM	P3-6	In 2050, about 9 billion people will live on this planet ? how can we ensure at least basic, decent livelihoods for all with more equity and social justice while climatic changes will have taken effect, scarcity will have led to significant price increases in water, food, mineral oil, natural gas, and many materials? ICLEI?s vision is not to merely look at the status quo and make incremental improvements to it, but rather to consider the systemic changes we need to make now in order to ensure sustained human life on earth. Within this approach, the side event will consider specifically how we must design our cities now in order to create a sustainable urban future. Which decisions and by whom have to be taken now in order to create a sustainable urban city of 2050?	ICLEI - Local Governments for Sustainability	
Strengthening National Apex Bodies of Sustainable Development (SD) for	21/06/2012	19:00:00 PM	P3-A	Agenda 21 called for setting up national coordinating structures to translate countries? aspirations of sustainable development (SD) into concrete actions and establish national programmes on Agenda 21. In the 20 year since 1992, countries in the Asia Pacific region have developed and are implementing their National SD Strategies, through their National Apex Bodies for SD. As part of the Rio + 20 preparatory process, each country has held national consultations and is preparing its national report to the conference. These national reports identify achievements, gaps and continuing needs. These bodies and strategies remain key national mechanisms for implementing the commitments of Agenda 21 and the Rio + 20 outcomes. This side event will showcase good practices, and identify ways to strengthen national implementation through new initiatives for capacity building, south-south exchange and enhanced sub regional cooperation.	Sri Lanka	

Coral Triangle Initiative on Coral Reefs, Fisheries and Food Security	21/06/2012	19:00:00 PM	P3-B	Creating a green economy is commonly understood to be about realising the links between healthy ecosystems and sustainable livelihoods and incomes. Some emphasise that green economy is ?blue economy?, recognising the significance of marine resources. The Coral Triangle is a significant illustration of the importance of countries cooperating regionally to provide sustainable management of ocean and coastal resources for the benefit of their own communities and beyond. The marine and coastal ecosystems of the region provide significant actual and potential economic benefits to more than 360 million people in the Coral Triangle, and the millions more outside the region who rely on its marine resources. However, these resources are under serious threat and mounting pressure and it is of global significance that the six Coral Triangle countries have cooperated to deal with these threats. The establishment of the Coral Triangle Initiative has created a powerful platform for collaboration to deliver national and regional commitments on multilateral conventions relevant for fisheries, oceans, biodiversity and climate. Further, the Initiative, with its focus on ?people-centred biodiversity conservation?, is an excellent illustration of how to progress towards achieving Blue Economies	WWF International	
Food for life & life of food	21/06/2012	19:00:00 PM	T-4	Hunger eradication is fundamental to achieving the Rio vision of sustainable development. UNV will also stress that sustainable development is more than a political decision and will depend on an adequate operational infrastructure; including volunteers implementing sustainable development activities.	United Nations Volunteers (UNV)	
Second Track beyond Rio - a Chinese Perspective on Green Economy	21/06/2012	19:00:00 PM	T-10	Eco-Forum Global (EFG) is the first of its kind as an international non-profit foundation incorporated in China. EFG believes strongly in the capability of informal mechanisms to bring together key decision makers from all stakeholders to better pursue a sustainable future. Our side event?s theme will be ?China Forum: Building an Inclusive and Green Economy.? We will have a moderator and approximately 5-7 panelists, including Maurice Strong, former Under Secretary-General of the UN, Hans d?Orville, Assistant Director-General for Strategic Planning of UNESCO, and Zhang Xinsheng, Secretary-General of Eco-Forum Global and former Chair of UNESCO?s Executive Board. This side event will provide a conclusion on effective strategies to build a green economy using the Chinese experience as a starting point and discuss ways and actions to sustain progress toward sustainable development goals after Rio+20. In particular, the panel will discuss how informal mechanisms can contribute to a post-Rio+20 world.	Eco-Forum Global	
Decisions we need for the city of 2030	21/06/2012	19:00:00 PM	P3-6	In 2050, about 9 billion people will live on this planet ? how can we ensure at least basic, decent livelihoods for all with more equity and social justice while climatic changes will have taken effect, scarcity will have led to significant price increases in water, food, mineral oil, natural gas, and many materials? ICLEI?s vision is not to merely look at the status quo and make incremental improvements to it, but rather to consider the systemic changes we need to make now in order to ensure sustained human life on earth. Within this approach, the side event will consider specifically how we must design our cities now in order to create a sustainable urban future. Which decisions and by whom have to be taken now in order to create a sustainable urban city of 2050?	ICLEI - Local Governments for Sustainability	

Strengthening National Apex Bodies of Sustainable Development (SD) for	21/06/2012	19:00:00 PM	P3-A	Agenda 21 called for setting up national coordinating structures to translate countries? aspirations of sustainable development (SD) into concrete actions and establish national programmes on Agenda 21. In the 20 year since 1992, countries in the Asia Pacific region have developed and are implementing their National SD Strategies, through their National Apex Bodies for SD. As part of the Rio + 20 preparatory process, each country has held national consultations and is preparing its national report to the conference. These national reports identify achievements, gaps and continuing needs. These bodies and strategies remain key national mechanisms for implementing the commitments of Agenda 21 and the Rio + 20 outcomes. This side event will showcase good practices, and identify ways to strengthen national implementation through new initiatives for capacity building, south-south exchange and enhanced sub regional cooperation.	Sri Lanka	
Coral Triangle Initiative on Coral Reefs, Fisheries and Food Security	21/06/2012	19:00:00 PM	P3-B	Creating a green economy is commonly understood to be about realising the links between healthy ecosystems and sustainable livelihoods and incomes. Some emphasise that green economy is ?blue economy?, recognising the significance of marine resources. The Coral Triangle is a significant illustration of the importance of countries cooperating regionally to provide sustainable management of ocean and coastal resources for the benefit of their own communities and beyond. The marine and coastal ecosystems of the region provide significant actual and potential economic benefits to more than 360 million people in the Coral Triangle, and the millions more outside the region who rely on its marine resources. However, these resources are under serious threat and mounting pressure and it is of global significance that the six Coral Triangle countries have cooperated to deal with these threats. The establishment of the Coral Triangle Initiative has created a powerful platform for collaboration to deliver national and regional commitments on multilateral conventions relevant for fisheries, oceans, biodiversity and climate. Further, the Initiative, with its focus on ?people-centred biodiversity conservation?, is an excellent illustration of how to progress towards achieving Blue Economies	WWF International	
Food for life & life of food	21/06/2012	19:00:00 PM	T-4	Hunger eradication is fundamental to achieving the Rio vision of sustainable development. Current pathways have left 1.4 billion in extreme poverty, 925 million hungry and many more malnourished and food insecure. There can be no sustainable development when billions of people are left in hunger, poverty and food insecurity on the side-lines of mainstream development, with no protection from risks and shocks, and no hope to contribute to and benefit from growth, nor to fully enjoy their human development potential. Moving sustainable development requires a shift to food production and consumption systems that are productive, sustainable and fair.	Food and Agriculture Organization of the United Nations (FAO)	
Educating for a sustainable future	21/06/2012	19:00:00 PM	T-2	Moving towards sustainable development cannot be achieved by political agreements, financial incentives or technological solutions alone. To safeguard the natural environment and promote greater global equity, we need a fundamental change in the ways we think and act. This can only be achieved if all individuals and societies are equipped and empowered by knowledge, skills and values as well as heightened awareness to drive such change. The transition towards green economies and societies requires that we educate and train everyone and prepare society at large for such a sustainable future. This entails the comprehensive revision of current curricula, job qualifications and corresponding learning objectives of educational programmes at all levels as well as the development or re-design of relevant professional training and capacity-building.	United Nations Educational, Scientific and Cultural Organization (UNESCO)	
Integrating the social dimensions of green economy into policy	21/06/2012	19:00:00 PM	T-9	The preparatory process for Rio+20 has called for renewed attention to the social dimensions of development, however green economy and sustainable development debates have largely been dominated by economic and environmental concerns. This side event brings together policy-relevant lessons from recent research by UNRISD, UNESCO and ISSC, and focuses on the existing gaps and barriers that need to be overcome in order for the social dimensions of green economy to be better integrated into green economy decision-making. We outline what a ?social lens? on green economy might look like, pointing to the key role for social policy in addressing negative social impacts of transition, institutional change, and achieving policy coherence. These social dimensions are not add-ons to economic or environmental concerns, but underpin the process of structural transformation required to move towards development policies that are inclusive, equitable and sustainable. Finally, we highlight directions for future research in this area.	United Nations Research Institute for Social Development (UNRISD)	

PRIVATE SECTOR DIALOGUE IN THE CONTEXT OF GREEN ECONOMY	21/06/2012	19:00:00 PM	P3-E	The private sector is getting increasingly aware of its role for long term growth that is green and inclusive for sustainable development. It is providing new ideas in the fight to end global poverty by partnering with traditional development players such as national aid agencies and NGOs, leveraging supply chains to create economic opportunity for the world?s poorest people, and incorporating social responsibility into their business practices. It is an important contributor to shape the green and inclusive growth agenda of Africa. Governments need to ensure a conducive investment climate to spur private sector engagement. The objective of this side event is to bring together donors, private sector representatives, civil society and government officials to discuss their respective roles in helping enable a conducive environment for private sector development in the context of green growth and green development.	African Development Bank	
The President of the General Assembly is launching a system-wide initiative to offset the carbon footprint from UN staff participation in Rio +20. The Special Unit for South-South Cooperation has been tasked to facilitate this initiative by building partnerships and leveraging the services of its flagship exchange platform - South-South Global Assets and Technology Exchange (SS-GATE) - to offset the estimated 3,600 tonnes of CO2 emissions from the participation (including travel) of approximately 1,400 UN staff in Rio +20. At this side event, the President of the General Assembly will formally launch the initiative and recognize partners and donors. A reception will follow.	21/06/2012	19:00:00 PM	T-8	The President of the General Assembly is launching a system-wide initiative to offset the carbon footprint from UN staff participation in Rio +20. The Special Unit for South-South Cooperation has been tasked to facilitate this initiative by building partnerships and leveraging the services of its flagship exchange platform - South-South Global Assets and Technology Exchange (SS-GATE) - to offset the estimated 3,600 tonnes of CO2 emissions from the participation (including travel) of approximately 1,400 UN staff in Rio +20. VOLUNTEER ACTION COUNTS: THE POWER OF VOLUNTEERISM FOR SD	21/06/2012	19:00:00 PM	T-6	VOLUNTEER ACTION COUNTS: THE POWER OF VOLUNTEERISM FOR SUSTAINABLE DEVELOPMENT Volunteerism is an essential ingredient in the recipe for sustainable development. In the same way as sustainable development is a cross-cutting theme, UNV?s partnerships for Rio+20 are cross-cutting. Building on the global partnerships developed during the International Year of Volunteers + 10, UNV will bring together partners from different organizations, backgrounds and fields: UN Agencies, governments, private sector, academia, NGOs ? from the global North and South ? to speak about citizen participation in making sustainable development for future generations a reality. In its side-event, UNV and partners will provide good practice examples from several countries from the South as well as present the results of the multi-media campaign ?VolunteerActionCounts?. UNV will also stress that sustainable development is more than a political decision and will depend on an adequate operational infrastructure; including volunteers implementing sustainable development activities.	United Nations Volunteers (UNV)

1 Billion Reasons to Deliver Clean Energy Access for the Poor	22/06/2012	11:00:00	T-2 (Riocentro)	After decades of attempts to electrify rural populations worldwide the International Energy Agency (IEA) in a series of energy access papers has come to the conclusion that business as usual ¡V defined as a reliance on centralized grid extensions can not solve the problem. The IEA found that by 2030 there will still be 1 billion people without electricity using current approaches, while billions more considered "electrified" will receive only a few hours of electricity per day. We argue that the only way to reverse the present situation and reach the 1 billion people without electricity is to abandon the "grid fallacy" - that building out the grid is the only way to achieve universal electrification and the "aid trap" - that rural electrification requires heavy end user subsidies typically associated with costly grid extensions	Sierra Club International	
1 Billion Reasons to Deliver Clean Energy Access for the Poor	22/06/2012	11:00:00	T-6 (Riocentro)	This side event aims at hosting "Vision 2050: A new agenda for business in Brazil" official international launch. The document, a version of WBCSD?s internationally acclaimed ?Vision 2050?, but solely based on Brazilian scenario, will be symbolically signed by BCSD-Brazil associated CEOs as their pathway and agendas toward a sustainable world for the next forty years. It is expected the presence of government, business, civil society, academia and press representatives as ?Vision 2050 Brazil? stands as a landmark on sustainability talks and actions within Brazilian reality.	Conselho Empresarial Brasileiro para o Desenvolvimento Sustentável (CEBDS)	

Food, agriculture and conflicts - challenge for peace	22/06/2012	11:00:00	P3-6 (Riocentro)	The Side Event deals with the questions which dangers for security and peace pose the crisis of food supply; which temporary and structural problems pose societal conflicts in connection to food crisis, and which course of action exists for sustainable politics of prevention crisis and violence, for politics of civil cooperation and disarmament. Using Green Agriculture to Stimulate Economic Growth, Attain Food Secu	22/06/2012	11:00:00	P3-A (Riocentro)	TITLE - Using Green Agriculture to Stimulate Economic Growth, Attain Food Security and Eradicate Poverty In October 2011 an Expert Group Meeting on Using Green Agriculture to Stimulate Economic Growth, Attain Food Security and Eradicate Poverty, was held in Israel as a contribution to the preparation for Rio+20 . The meeting took place in co-operation with UN-DESA and was attended by representatives from 28 countries, three UN organisations and representatives of civil society and major groups; thus the full geographical spectrum was represented. The purpose of the meeting was to raise awareness of the central role that green and sustainable agriculture can play in stimulating economic growth and combating poverty, and ultimately attaining food security, through the sharing of approaches, best practices and lessons learned. One of the recommendations of the meeting was to present the EGM Chair's summary at the Rio+20 Conference	Israel	
Sustainable and Inclusive Growth: An Emerging Paradigm for Latin America & the Caribbean	22/06/2012	11:00:00	T-9 (Riocentro)	We need a new way of looking at Latin America and the Caribbean, with a perspective that emphasizes the region?s strengths without neglecting its weaknesses, that focuses on opportunities without ignoring risks. We need a way that promotes long-term development without forgetting that the situation still demands prudent, disciplined public policies. The Inter-American Development Bank is reassessing its role in mainstreaming sustainability in Latin America and the Caribbean and therefore seeks to promote high level dialogue around the concept of sustainability and its concrete dimensions. As a partner, UNDP has always assessed the Bank in its different initiatives, its recommendations on how the institution can contribute to the growth, equity and competitiveness of the region.	Inter-American Development Bank (IDB)	
U.S. Priorities for Rio+20	22/06/2012	11:00:00	T-5 (Riocentro)	?U.S. Priorities for Rio+20? will feature high-level United States Government officials and leaders from the private sector and civil society. This exciting and compelling event will focus on U.S. priorities for advancing sustainable development. We will feature speakers and presentations that demonstrate the commitment of the United States to integrate the three pillars of sustainable development: economic, environmental, and social. The side event will also address themes of promoting a green economy, good governance, the importance of data collection and sharing, the impact of connection technologies in furthering sustainable development, and women?s and youth issues.	United States of America	

Sustainable Global Transformation and Inclusive Green Growth	22/06/2012	11:00:00	T-6 (Riocentro)	This side event will discuss pathways to a sustainable future by drawing on countries' experiences and major reports by the German Advisory Council on Global Change (WBGU) and the World Bank. The WBGU will share key findings from "Worlds in Transition – A Social Contract for Sustainability," which outlines the concepts of a new social contract for sustainability and 'great transformations', identifies opportunities and barriers to change, and recommends relevant policies for transformation management. In particular the WBGU will discuss the needed transformation of the energy system. Similarly, the World Bank will draw on "Inclusive Green Growth: The Pathway to Sustainable Development" to build the economic case for green growth, a necessary input into sustainable development. The Bank will argue that greener growth is necessary, efficient, and affordable, and should focus on what needs to happen in the next five to 10 years to avoid getting locked into unsustainable paths and causing irreversible environmental damage. Narratives from Vietnam and Morocco will contextualize these analytical views in the ongoing efforts of developing countries to devise and implement green growth strategies, providing	German Advisory Council on Global Change (WBGU)	
Dynamics of Rio: Population, Women and Rights	22/06/2012	11:00:00	P3-B (Riocentro)	The International Planned Parenthood Federation (IPPF) and the Government of Denmark in collaboration with the Government of Brazil (TBC) and proposes the ?Dynamics of Rio: Population, Women and Rights? Side Event. The high level Side Event brings together a high level panel of governments and civil society to ensure that the Rio+20 outcome document highlights the centrality of sexual and reproductive health and rights (SRHR) to sustainable development. The International Conference on Population and Development (ICPD) Programme of Action must be reflected as a critical component to achieving sustainable development. The Rio+20 UN Conference on Sustainable Development will have a major bearing and influence on the post-2015 development framework. Governments and civil society must work together to ensure that SRHR are a central component of sustainable development. Rio+20 must recognize the centrality of human rights to sustainable development and particularly the well-being of women and young people in a changing world.	International Planned Parenthood Federation	
Blue Economy Leadership Event: showcasing efforts to achieve a Blue Ec	22/06/2012	11:00:00	P3-F (Riocentro)	Marine ecosystems and resources have a key role in supporting food security, sustainable livelihoods, economic opportunity and social inclusion for billions of people. Recognising this, ?Blue Economy? ? or the oceans aspects of the Rio+20 theme ?green economy in the context of sustainable development and poverty eradication? ? has been identified by many as a priority issue for Rio+20. Around the world, there are a number of innovative efforts underway to achieve a Blue Economy. This event will involve a selection of key Blue Economy leaders showcasing their efforts to conserve and sustainably manage marine resources, and defining key commitments and actions for the future.	Indonesia	
UN System: Together for the Future We Want	22/06/2012	11:00:00	P3-E (Riocentro)	UN Secretary-General and CEB Executive Heads will participate in the side event. IThe side event seeks to showcase concrete deliverables and innovative actions by which the UN system will provide coherent and integrated support to Member States in advancing sustainable development objectives and implementing of the Rio+20 outcome. The event is envisaged as a moderated discussion with CEB Executive Heads will focus on innovative ideas, forward-looking initiatives and promising partnerships to advance the global sustainable development agenda. Guided by a number ofoverarching questions, the debate will focus on priority areas for action and the role of the UN system in supporting Member States and their peoples.	UN System Chief Executives Board for Coordination (CEB)	
Transistion, Regional Cooperation and Sustainable Development	22/06/2012	11:00:00	T-8 (Riocentro)	Afghanistan is a member of G-7 Countries. (Fragile /post conflict country) Afghanistan is also, member of Least Developing Countries and Landlocked Developing Countries. During the past 10 years the government of Afghanistan with the support of a coalition of "International Security Forces (ISAF) and NATO" has been fighting against threats of international terrorism and fundamentalism. Right now the country is in a process of transition of security and governance from International actors to Afghans. A number of panellists consisting of representatives of government and civil society of Afghanistan and high-representatives of UN agencies, World Bank and will brief the audience. The unique experience of Afghanistan is a matter of interest for the participants of Rio +20 Conferences	Afghanistan	

1 Billion Reasons to Deliver Clean Energy Access for the Poor	22/06/2012	11:00:00	T-2 (Riocentro)	After decades of attempts to electrify rural populations worldwide the International Energy Agency (IEA) in a series of energy access papers has come to the conclusion that business as usual ¡V defined as a reliance on centralized grid extensions can not solve the problem. The IEA found that by 2030 there will still be 1 billion people without electricity using current approaches, while billions more considered "electrified" will receive only a few hours of electricity per day. We argue that the only way to reverse the present situation and reach the 1 billion people without electricity is to abandon the "grid fallacy" - that building out the grid is the only way to achieve universal electrification and the "aid trap" - that rural electrification requires heavy end user subsidies typically associated with costly grid extensions	Sierra Club International	
1 Billion Reasons to Deliver Clean Energy Access for the Poor	22/06/2012	11:00:00	T-6 (Riocentro)	This side event aims at hosting "Vision 2050: A new agenda for business in Brazil" official international launch. The document, a version of WBCSD?s internationally acclaimed ?Vision 2050?, but solely based on Brazilian scenario, will be symbolically signed by BCSD-Brazil associated CEOs as their pathway and agendas toward a sustainable world for the next forty years. It is expected the presence of government, business, civil society, academia and press representatives as ?Vision 2050 Brazil? stands as a landmark on sustainability talks and actions within Brazilian reality.	Conselho Empresarial Brasileiro para o Desenvolvimento Sustentável (CEBDS)	
Food, agriculture and conflicts - challenge for peace	22/06/2012	11:00:00	P3-6 (Riocentro)	The Side Event deals with the questions which dangers for security and peace pose the crisis of food supply; which temporary and structural problems pose societal conflicts in connection to food crisis, and which course of action exists for sustainable politics of prevention crisis and violence, for politics of civil cooperation and disarmament.	International Peace Bureau	
Sustaining resilience - development in crisis	22/06/2012	11:00:00	T-4 (Riocentro)	Unique case of Pakistan sustaining its development in face of: - Decade of uninvited natural calamities (Earthquake, Cyclones, Floods) - Decade of Conflict and engagement in ?war on terror? - Economic dampeners - Forcibly superimpose on self inflicted challenges (population, weak governance, corruption)	Pakistan	
Using Green Agriculture to Stimulate Economic Growth, Attain Food Secu	22/06/2012	11:00:00	P3-A (Riocentro)	TITLE - Using Green Agriculture to Stimulate Economic Growth, Attain Food Security and Eradicate Poverty In October 2011 an Expert Group Meeting on Using Green Agriculture to Stimulate Economic Growth, Attain Food Security and Eradicate Poverty, was held in Israel as a contribution to the preparation for Rio+20 . The meeting took place in co-operation with UN-DESA and was attended by representatives from 28 countries, three UN organisations and representatives of civil society and major groups; thus the full geographical spectrum was represented. The purpose of the meeting was to raise awareness of the central role that green and sustainable agriculture can play in stimulating economic growth and combating poverty, and ultimately attaining food security, through the sharing of approaches, best practices and lessons learned. One of the recommendations of the meeting was to present the EGM Chair's summary at the Rio+20 Conference	Israel	
Sustainable and Inclusive Growth: An Emerging Paradigm for Latin America & the Caribbean	22/06/2012	11:00:00	T-9 (Riocentro)	We need a new way of looking at Latin America and the Caribbean, with a perspective that emphasizes the region?s strengths without neglecting its weaknesses, that focuses on opportunities without ignoring risks. We need a way that promotes long-term development without forgetting that the situation still demands prudent, disciplined public policies. The Inter-American Development Bank is reassessing its role in mainstreaming sustainability in Latin America and the Caribbean and therefore seeks to promote high level dialogue around the concept of sustainability and its concrete dimensions. As a partner, UNDP has always assessed the Bank in its different initiatives, its recommendations on how the institution can contribute to the growth, equity and competitiveness of the region.	Inter-American Development Bank (IDB)	

U.S. Priorities for Rio+20	22/06/2012	11:00:00	T-5 (Riocentro)	?U.S. Priorities for Rio+20? will feature high-level United States Government officials and leaders from the private sector and civil society. This exciting and compelling event will focus on U.S. priorities for advancing sustainable development. We will feature speakers and presentations that demonstrate the commitment of the United States to integrate the three pillars of sustainable development: economic, environmental, and social. The side event will also address themes of promoting a green economy, good governance, the importance of data collection and sharing, the impact of connection technologies in furthering sustainable development, and women?s and youth issues.	United States of America	
Sustainable Global Transformation and Inclusive Green Growth	22/06/2012	11:00:00	T-6 (Riocentro)	This side event will discuss pathways to a sustainable future by drawing on countries' experiences and major reports by the German Advisory Council on Global Change (WBGU) and the World Bank. The WBGU will share key findings from "Worlds in Transition – A Social Contract for Sustainability," which outlines the concepts of a new social contract for sustainability and 'great transformations', identifies opportunities and barriers to change, and recommends relevant policies for transformation management. In particular the WBGU will discuss the needed transformation of the energy system. Similarly, the World Bank will draw on "Inclusive Green Growth: The Pathway to Sustainable Development" to build the economic case for green growth, a necessary input into sustainable development. The Bank will argue that greener growth is necessary, efficient, and affordable, and should focus on what needs to happen in the next five to 10 years to avoid getting locked into unsustainable paths and causing irreversible environmental damage. Narratives from Vietnam and Morocco will contextualize these analytical views in the ongoing efforts of developing countries to devise and implement green growth strategies, providing	German Advisory Council on Global Change (WBGU)

Environmental Public Agencies Meeting at Rio+20	22/06/2012	13:00:00	T-2 (Riocentro)	The Brazilian environmental public agencies in the Municipalities and Federal States, represented by ABEMA and ANAMMA, will promote a meeting from 18th to 19th June in the city of Rio de Janeiro. The meeting will discuss issues involving Environment Public Policy and the setting of environmental management regarding the Rio +20 theme: green economy in the context of sustainable development and poverty eradication. The discussions will provide a document that will address the 10 principles regarded as fundamental to the sustainability through the Brazilian environmental managers? point of view. The main goal is elaborating a consistent and democratic document to be delivered during the Conference Rio+20.	Associação Nacional de Órgãos Municipais de Meio Ambiente (ANAMMA)	
Proposals for a Green, Inclusive and Responsible Economy	22/06/2012	13:00:00	T-8 (Riocentro)	With the perspective of a Green Economy, in the context of sustainable development and poverty eradication, Ethos Institute has mobilized, motivated and helped companies manage their business in a socially responsible manner. However, management tools and voluntary commitments from the business sector have not been sufficient to promote the necessary changes. We have built, therefore, a vision of a new development model, requiring new process in the economy, making it green, inclusive and responsible. With this vision, companies should not only improve their business practices, but must also influence public policies, demanding higher standards from governments and transforming, effectively, the economy.	Instituto Ethos	
A roadmap for ECE Forests in a Green Economy	22/06/2012	13:00:00	T-5 (Riocentro)	The ECE Timber Committee and the FAO European Forestry Commission have developed a draft Action Plan for the Forest Sector in a Green Economy. The plan provides the basis for ECE member States to identify actions required at the national, regional and international levels for a transition towards a green economy. The plan covers the following sectors: 1. Sustainable production and consumption of forest products 2. The low-carbon forest sector 3. Decent green jobs in the forest sector 4. Valuation of and payment for forest ecosystem services 5. Monitoring and governance of the forest sector. A Road Map and related timeline for the development and implementation of actions identified in the plan should be further developed during the side event.	United Nations Economic Commission for Europe (UNECE)	

Enhancing science-policy links for Rio+20: The Future Earth Initiative	22/06/2012	13:00:00	T-9 (Riocentro)	This side event explores calls in the Rio+20 outcome document to improve science-policy links, and develop a new mechanism for international scientific cooperation and collaboration on sustainable development. Speakers will introduce efforts by the scientific community to collaborate with other stakeholders to meet these demands, particularly through the major new global initiative ?Future Earth ? research for global sustainability?, which was jointly established by the International Council for Science (ICSU), the International Social Science Council (ISSC), the Belmont Forum, UNEP, UNU and UNESCO, with WMO as observer. Future Earth aims to work with policy-makers and other stakeholders to deliver the knowledge needed to enable societies to meet their sustainable development goals. The event will encourage debate between scientists, policy-makers and civil society on how this initiative can ensure that international science is truly collaborating with policy-makers and other stakeholders, to provide the knowledge needed in the wake of Rio+20.	International Council for Science (ICSU)	
Youth as change agent for sustainable development	22/06/2012	13:00:00	T-4 (Riocentro)	It will be a seminar, presented by Mr. Muhammad Kabir Secretary General Batool Welfare Trust. Central idea will be bases on, ?Sustainable Development?. Stress will on involvement of youth for success of Rio+20 declarations for the overall betterment of environment and sustainable development.	Batool Welfare Trust (BWT)	
Climate Change and Sustainable Development in Latin America	22/06/2012	13:00:00	T-10 (Riocentro)	The Latin American Platform on Climate (LPC) carries out the Report on the State and Quality of Public Policies on Climate Change and Development in Latin America that is held on a biannual basis, in 10 countries in the region. The results of the research will be enriched by national forums and then released on this side event in the framework of Rio +20. This strategic project for the region strengthens the alliance of the 17 LPC member organizations to achieve synergy and a common product that will improve the quality of public policies on climate change and development (CCD) in the region, and will strengthen both the capacity of policy makers and civil society to develop policies on CCD as well as the regional position in international negotiations through the identification of common strategies to be developed on the basis of this document.	Sociedade de Pesquisa em Vida Selvagem e Educação Ambiental (SPVS)	
Ethical and Religious Insights on The Future We Want	22/06/2012	13:00:00	T-6 (Riocentro)	Poverty, environmental degradation, sustainability and development have been at the core of religious communities and faith based organizations? (FBO) concerns. Religious communities and FBO echo the suffering of people because of threats to their lives due to poverty, hunger, diseases, environmental degradation and the climate and water crises. This side event will highlight the ethical and spiritual dimensions of green economy, sustainable development and its international framework, based on their religious traditions and the long involvement they have had with the United Nations. A special video message from His All Holiness, the Ecumenical Patriarch Bartholomew will be projected at the side event. Speakers will include religious leaders from Afro-Brazilian, Christian, Jewish and Muslim traditions.	World Council of Churches	
Decent Work and Social Protection Floors for Sustainable Development	22/06/2012	13:00:00	T-1 (Riocentro)	The new vision of development links economic growth with low environmental impact, social inclusion and decent jobs. This requires a strong social pillar of sustainable development and policies which reinforce the synergies and mitigate the trade-offs between the environmental, economic and social pillars. The transition to a greener, fairer and sustainable development will create opportunities but also enormous challenges. With the right policies, such transformation can lead to social inclusion and more and better jobs. It provides significant opportunities for the creation of new jobs in sustainable enterprises, for the upgrading of existing jobs to lift millions out of poverty and to improve livelihood through access to basic social protection and services in the form of social protection floors. The side event will highlight examples of coherent policies and effective programmes linking social protection, employment, economic and environmental issues. The side event will launch major initiatives lead by ILO.	International Labour Organization (ILO)	
The business case for sustainable development	22/06/2012	13:00:00	P3-E (Riocentro)	The goal of the dialogue is to strengthen the relationship between Member States and Business and Industry for Sustainable Development.	Barbados	

Sustainable Development: The Critical Role of Disaster Risk Management	22/06/2012	13:00:00	P3-A (Riocentro)	The impact of natural disasters is increasing over time in parallel to the expansion of human activity. Furthermore, growing urbanization increases exposure and vulnerability of large numbers of people to natural hazards. The escalation of severe disaster events triggered by natural hazards and related technological and environmental disasters is increasingly threatening both sustainable development and poverty-reduction initiatives. Poverty and hazard vulnerability are integrally linked, thereby increasing both the risk and exposure to disasters. Sustainable and integrated management of natural resources will increase the resilience of communities to disasters by reversing current trends of environmental degradation. With the aim of reducing risks from natural disasters, the Ministers of Environment of the 57 Islamic countries adopted an Islamic Strategy for Disaster Risk Reduction and Management, and an its Implementation Plan with the aim of reducing risk from natural disasters which would be presented at a side event during the Rio+20 meetings.	Saudi Arabia	
les financements innovants au service du developpement durable	22/06/2012	13:00:00	P3-F (Riocentro)	L'aide publique au développement devrait subir une baisse constante dans les prochaines années alors même que les besoins se font plus pressants. Les financements innovants pour le développement ont été créés disposer de moyens concrets pour inverser cette tendance. Basés sur un menu d'options, ils constituent une autre façon de financer le développement, en complément de l'APD. Le Groupe Pilote, qui regroupe 63 membres (Etats, organisations internationales et organisations non gouvernementales), a déjà organisé plusieurs réunions de haut niveau en marge de conférences et Sommets des Nations Unies (PMA, 2011; OMD 2010; Doha 2008). Cet événement parallèle de haut niveau constituera un moment clé pour évaluer le potentiel des financements innovants pour chaque dimension du développement durable (sociale, économique et environnementale),. Organisé en partenariat avec les Nations Unies, il réunira des représentants de haut niveau des États, Organisations internationales, ONG et Fondations.	France	
Roots of Equity : what rights and safeguards do women need who are dependent for their livelihoods on forest, biodiversity and subsistence farmers.	22/06/2012	13:00:00	T-2 (Riocentro)	The degradation and destruction of forests, grasslands, coastal areas and other ecosystems is having a particularly strong negative impact on women, as they often depend on the wood, medicinal plants, wild fruits, seafood and other food and energy sources these ecosystems provide. The agro-fuel plantations cause land grabbing and other violations of the rights of indigenous peoples and communities and are one of the root causes of the current food crisis and effect in a dramatic way the lives of women and their families. Women and their traditional knowledge systems play a very important role in the management of Indigenous territories and community conserved areas and other community-based initiatives to conserve and restore ecosystems. This role, and these initiatives, should be recognized, protected against outside economic interference, and strengthened Biodiversity loss in agriculture, the threat of GMO-trees, the gender aspects of farmer?s traditional knowledge and implications of the asses and benefit sharing agreements from Nagoya will be the focus of this side-event. What are the key areas of concern, what actions should citizens, business and policy makers take to protect women?s forest dwellers and	Women Major Group	
E-sustainability Seminar	22/06/2012	13:00:00	P3-1 (Riocentro)	The E-sustainability Seminar is a concerted effort between the Inter-American Bar Association and the Brazilian Chamber of Electronic Commerce to help promote technology as one of the foundations of sustainable development. The event will be composed of lectures given by experts on the technology and sustainability fields, enabling a broad understanding of how technology can help the world develop in a sustainable and affordable way, going through economic and legal issues concerning this matter. A round of networking will be held afterwards, to consolidate the efforts and explanations of the lectures and promote an even bigger cooperation amongst those who participate in this event.	Inter-American Bar Association

The discussions will provide a document that will address the 10 principles regarded as fundamental to the sustainability through the Brazilian environmental managers? point of view. The main goal is elaborating a consistent and democratic document to be delivered during the Conference Rio+20.	Associação Nacional de Órgãos Municipais de Meio Ambiente (ANAMMA)	
Proposals for a Green, Inclusive and Responsible Economy	22/06/2012	13:00:00	T-8 (Riocentro)	With the perspective of a Green Economy, in the context of sustainable development and poverty eradication, Ethos Institute has mobilized, motivated and helped companies manage their business in a socially responsible manner. However, management tools and voluntary commitments from the business sector have not been sufficient to promote the necessary changes. We have built, therefore, a vision of a new development model, requiring new process in the economy, making it green, inclusive and responsible. With this vision, companies should not only improve their business practices, but must also influence public policies, demanding higher standards from governments and transforming, effectively, the economy.	Instituto Ethos	
A roadmap for ECE Forests in a Green Economy	22/06/2012	13:00:00	T-5 (Riocentro)	The ECE Timber Committee and the FAO European Forestry Commission have developed a draft Action Plan for the Forest Sector in a Green Economy. The plan provides the basis for ECE member States to identify actions required at the national, regional and international levels for a transition towards a green economy. The plan covers the following sectors: 1. Sustainable production and consumption of forest products 2. The low-carbon forest sector 3. Decent green jobs in the forest sector 4. Valuation of and payment for forest ecosystem services 5. Monitoring and governance of the forest sector. A Road Map and related timeline for the development and implementation of actions identified in the plan should be further developed during the side event.	United Nations Economic Commission for Europe (UNECE)	
Enhancing science-policy links for Rio+20: The Future Earth Initiative	22/06/2012	13:00:00	T-9 (Riocentro)	This side event explores calls in the Rio+20 outcome document to improve science-policy links, and develop a new mechanism for international scientific cooperation and collaboration on sustainable development. Speakers will introduce efforts by the scientific community to collaborate with other stakeholders to meet these demands, particularly through the major new global initiative ?Future Earth ? research for global sustainability?, which was jointly established by the International Council for Science (ICSU), the International Social Science Council (ISSC), the Belmont Forum, UNEP, UNU and UNESCO, with WMO as observer. Future Earth aims to work with policy-makers and other stakeholders to deliver the knowledge needed to enable societies to meet their sustainable development goals. The event will encourage debate between scientists, policy-makers and civil society on how this initiative can ensure that international science is truly collaborating with policy-makers and other stakeholders, to provide the knowledge needed in the wake of Rio+20.	International Council for Science (ICSU)	
Youth as change agent for sustainable development	22/06/2012	13:00:00	T-4 (Riocentro)	It will be a seminar, presented by Mr. Muhammad Kabir Secretary General Batool Welfare Trust. Central idea will be bases on, ?Sustainable Development?. Stress will on involvement of youth for success of Rio+20 declarations for the overall betterment of environment and sustainable development.	Batool Welfare Trust (BWT)	

Climate Change and Sustainable Development in Latin America	22/06/2012	13:00:00	T-10 (Riocentro)	The Latin American Platform on Climate (LPC) carries out the Report on the State and Quality of Public Policies on Climate Change and Development in Latin America that is held on a biannual basis, in 10 countries in the region. The results of the research will be enriched by national forums and then released on this side event in the framework of Rio +20. This strategic project for the region strengthens the alliance of the 17 LPC member organizations to achieve synergy and a common product that will improve the quality of public policies on climate change and development (CCD) in the region, and will strengthen both the capacity of policy makers and civil society to develop policies on CCD as well as the regional position in international negotiations through the identification of common strategies to be developed on the basis of this document.	Sociedade de Pesquisa em Vida Selvagem e Educação Ambiental (SPVS)	
Ethical and Religious Insights on The Future We Want	22/06/2012	13:00:00	T-6 (Riocentro)	Poverty, environmental degradation, sustainability and development have been at the core of religious communities and faith based organizations? (FBO) concerns. Religious communities and FBO echo the suffering of people because of threats to their lives due to poverty, hunger, diseases, environmental degradation and the climate and water crises. This side event will highlight the ethical and spiritual dimensions of green economy, sustainable development and its international framework, based on their religious traditions and the long involvement they have had with the United Nations. A special video message from His All Holiness, the Ecumenical Patriarch Bartholomew will be projected at the side event. Speakers will include religious leaders from Afro-Brazilian, Christian, Jewish and Muslim traditions.	World Council of Churches	
Decent Work and Social Protection Floors for Sustainable Development	22/06/2012	13:00:00	T-1 (Riocentro)	The new vision of development links economic growth with low environmental impact, social inclusion and decent jobs. This requires a strong social pillar of sustainable development and policies which reinforce the synergies and mitigate the trade-offs between the environmental, economic and social pillars. The transition to a greener, fairer and sustainable development will create opportunities but also enormous challenges. With the right policies, such transformation can lead to social inclusion and more and better jobs. It provides significant opportunities for the creation of new jobs in sustainable enterprises, for the upgrading of existing jobs to lift millions out of poverty and to improve livelihood through access to basic social protection and services in the form of social protection floors. The side event will highlight examples of coherent policies and effective programmes linking social protection, employment, economic and environmental issues. The side event will launch major initiatives lead by ILO.	International Labour Organization (ILO)	
The business case for sustainable development	22/06/2012	13:00:00	P3-E (Riocentro)	The goal of the dialogue is to strengthen the relationship between Member States and Business and Industry for Sustainable Development.	Barbados	
Sustainable Development: The Critical Role of Disaster Risk Management	22/06/2012	13:00:00	P3-A (Riocentro)	The impact of natural disasters is increasing over time in parallel to the expansion of human activity. Furthermore, growing urbanization increases exposure and vulnerability of large numbers of people to natural hazards. The escalation of severe disaster events triggered by natural hazards and related technological and environmental disasters is increasingly threatening both sustainable development and poverty-reduction initiatives. Poverty and hazard vulnerability are integrally linked, thereby increasing both the risk and exposure to disasters. Sustainable and integrated management of natural resources will increase the resilience of communities to disasters by reversing current trends of environmental degradation. With the aim of reducing risks from natural disasters, the Ministers of Environment of the 57 Islamic countries adopted an Islamic Strategy for Disaster Risk Reduction and Management, and an its Implementation Plan with the aim of reducing risk from natural disasters which would be presented at a side event during the Rio+20 meetings.	Saudi Arabia	

les financements innovants au service du developpement durable	22/06/2012	13:00:00	P3-F (Riocentro)	L'aide publique au développement devrait subir une baisse constante dans les prochaines années alors même que les besoins se font plus pressants. Les financements innovants pour le développement ont été créés disposer de moyens concrets pour inverser cette tendance. Basés sur un menu d'options, ils constituent une autre façon de financer le développement, en complément de l'APD. Le Groupe Pilote, qui regroupe 63 membres (Etats, organisations internationales et organisations non gouvernementales), a déjà organisé plusieurs réunions de haut niveau en marge de conférences et Sommets des Nations Unies (PMA, 2011; OMD 2010; Doha 2008). Cet événement parallèle de haut niveau constituera un moment clé pour évaluer le potentiel des financements innovants pour chaque dimension du développement durable (sociale, économique et environnementale),. Organisé en partenariat avec les Nations Unies, il réunira des représentants de haut niveau des États, Organisations internationales, ONG et Fondations.	France	
Roots of Equity : what rights and safeguards do women need who are dependent for their livelihoods on forest, biodiversity and subsistence farmers.	22/06/2012	13:00:00	T-2 (Riocentro)	The degradation and destruction of forests, grasslands, coastal areas and other ecosystems is having a particularly strong negative impact on women, as they often depend on the wood, medicinal plants, wild fruits, seafood and other food and energy sources these ecosystems provide. The agro-fuel plantations cause land grabbing and other violations of the rights of indigenous peoples and communities and are one of the root causes of the current food crisis and effect in a dramatic way the lives of women and their families. Women and their traditional knowledge systems play a very important role in the management of Indigenous territories and community conserved areas and other community-based initiatives to conserve and restore ecosystems. This role, and these initiatives, should be recognized, protected against outside economic interference, and strengthened Biodiversity loss in agriculture, the threat of GMO-trees, the gender aspects of farmer?s traditional knowledge and implications of the asses and benefit sharing agreements from Nagoya will be the focus of this side-event. What are the key areas of concern, what actions should citizens, business and policy makers take to protect women?s forest dwellers and	Women Major Group	
E-sustainability Seminar	22/06/2012	13:00:00	P3-1 (Riocentro)	The E-sustainability Seminar is a concerted effort between the Inter-American Bar Association and the Brazilian Chamber of Electronic Commerce to help promote technology as one of the foundations of sustainable development. The event will be composed of lectures given by experts on the technology and sustainability fields, enabling a broad understanding of how technology can help the world develop in a sustainable and affordable way, going through economic and legal issues concerning this matter. A round of networking will be held afterwards, to consolidate the efforts and explanations of the lectures and promote an even bigger cooperation amongst those who participate in this event.	Inter-American Bar Association	
Environmental Public Agencies Meeting at Rio+20	22/06/2012	13:00:00	T-2 (Riocentro)	The Brazilian environmental public agencies in the Municipalities and Federal States, represented by ABEMA and ANAMMA, will promote a meeting from 18th to 19th June in the city of Rio de Janeiro. The meeting will discuss issues involving Environment Public Policy and the setting of environmental management regarding the Rio +20 theme: green economy in the context of sustainable development and poverty eradication. The discussions will provide a document that will address the 10 principles regarded as fundamental to the sustainability through the Brazilian environmental managers? point of view. The main goal is elaborating a consistent and democratic document to be delivered during the Conference Rio+20.	Associação Nacional de Órgãos Municipais de Meio Ambiente (ANAMMA)
